

National Aerosol Association

**2014 NCWM Interim Meeting
January 9, 2014**

Bag on Valve (BOV)

- Products include all types of products liquids, foams, gels or powders
- BOV is pressurized
- BOV uses a propellant compressed gas or liquefied gas
- Above are the same as traditional aerosols

○ One Difference

- Propellant is not released with product.
- However propellant is released upon destruction of container.

To Consumer

- Both BOV Containers & Traditional aerosol appear the same.
- Thus labeling should be the same.

NAA Position

- ◉ NAA does not oppose dual labeling for BOV.
 - net weight and net volume on container
- ◉ NAA does oppose any labeling stating “non-aerosol” on the container.

Questions or Comments

Thank you!
