Process model

David Flater

Computer Scientist

Technical Guidelines Development Committee

April 20, 2005 Plenary Meeting

What it is

- A formal model of the elections process in both graphical and textual representations
- A catalog of the relevant activities and tangible things (“objects”)
- An identification of the dependencies among activities and objects

Technical Guidelines Development Committee

April 20, 2005 Plenary Meeting

Why it is

- TGDC Resolution #33-05, “Glossary and Voting Model”
- Needed to specify intended scope of requirements
- Complements glossary to further clarify vocabulary
- Organization of document (deferred)

Technical Guidelines Development Committee

April 20, 2005 Plenary Meeting

Where it is

- Draft VVSG2 Section 3 (corrected)
- Errata

Technical Guidelines Development Committee

April 20, 2005 Plenary Meeting

Origins

- Review of previous work
- Input from CRT subcommittee
- Reconciliation of conflicting vocabulary and models
- Elaboration as needed

Technical Guidelines Development Committee

April 20, 2005 Plenary Meeting

Example

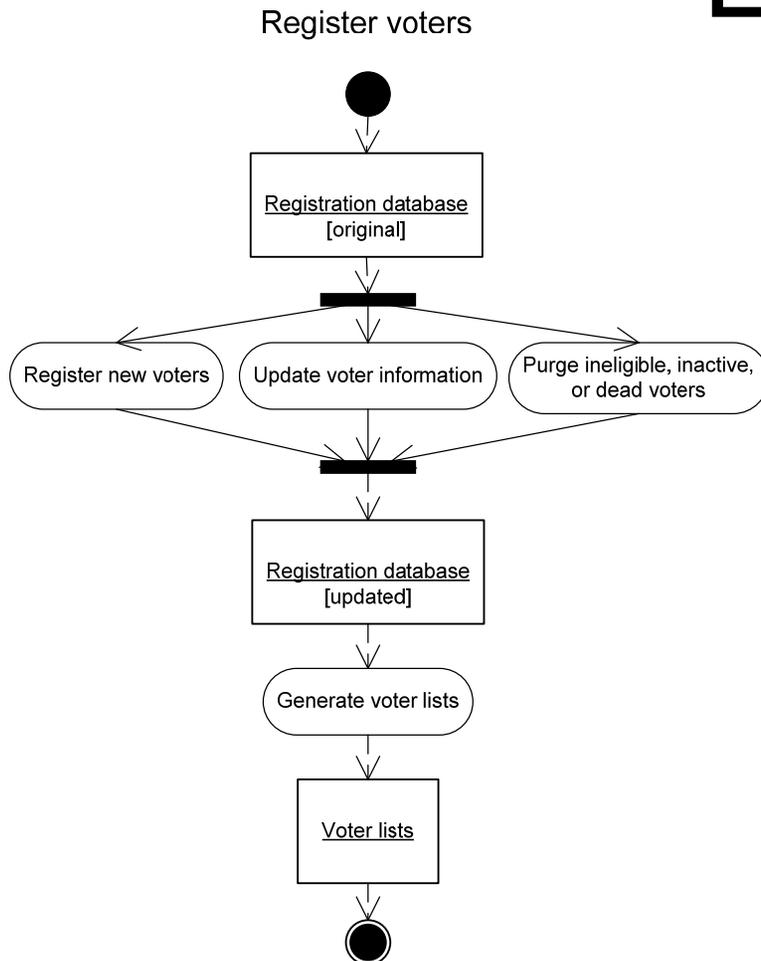

Diagram: Register voters

Begin

[Registration database [original]]

ParBegin

(Register new voters)

(Update voter information)

(Purge ineligible, inactive, or dead voters)

ParEnd

[Registration database [updated]]

(Generate voter lists)

[Voter lists]

End

Language

- Graphical representation is activity diagram as defined in Unified Modeling Language version 1.5
- Textual representation is custom pseudocode language

Technical Guidelines Development Committee

April 20, 2005 Plenary Meeting

Issues

- Vocabulary is still evolving
- Needs review
- Probably never match any state's processes perfectly
- Technical peeves with text formalism

Technical peeves

- Sacrificed technical perfection for readability
 - “Improper” nesting of processes
 - Abuse of Dijkstra’s parbegin/parend
- Sufficiently powerful formalisms would enable a “proper” translation to text
- Powerful formalisms not usable by untrained reader
