Greetings,

Upon initial review of the Subject Framework something stuck out right away. Your third update uses terminology that could cause confusion across numerous entities currently working with Identity Credentialing and Access Management (ICAM).

I am afraid with the below update as stated it might introduce yet another Acronym which would further confuse the landscape. Perhaps you should add Credentialing and just name the Category Identity, Credentialing, and Access Management (ICAM). Cheers, Mike

Refinements to better  
account for authentication,  
authorization, and identity  
proofing

The language of the Access Control Category has been refined to account for authentication, authorization, and identity proofing. A Subcategory has been added to that Category. Finally, the Category has been renamed to Identity Management and Access Control ([PR.AC](#)) to better represent the scope of the Category and corresponding Subcategories.
