Subject: Feedback and References

Hi, first of all congrats for such useful work. This is very helpful for any kind of company (public or private). Just a few comments to be considered by your team work.

CIS CSC is now part of the "Center for Internet Security (CIS)" you should replace "Council On Cybersecurity".

About the Mapping between NIST CSF and CIS CSC you can use this work: <https://www.cisecurity.org/critical-controls/documents/NIST%20CSF%20mapping%20to%20CIS%20Controls.xlsx>

I really think that maybe you could add a new annex as part of the SP800-53 (called as "Cybersecurity Framework Referentes") to avoid include controls into a different document than this. Maybe if you put controls on different documents, could be considered as a difficult approach for someone who is not familiarized with this kind of practices.

I'll wait for your feedback.  
Regards.
