Subject: Error in Draft of CSF 1.1
To: "cyberframework@nist.gov" <cyberframework@nist.gov>

FYI: an error found in CSF 1.1 Draft.

In one of the key updates to version 1.1, it says, "The language of the Access Control Category … … the Category has been renamed to Identity Management and Access Control (PR.AC)"

Although this was renamed in a couple of areas, it was not changed in "Table 2: Function and Category Unique Identifiers". In that table, PR.AC is still listed as "Access Control".

Thanks, Corey
