Subject: Comments during the Update Webinar on the CSF - Mar 1 2017
To: cyberframework <cyberframework@nist.gov>

I have two comments:

1) Although a new category has been added to the Identify function for supply chain (Supply Chain Risk Management, the informative references section has not yet been updated to include relevant supply chain security standards like the O-TTPS (approved as ISO/IEC 20243), SP 161 and IS0 27036. There is a note in the published new version, that says: "NIST is currently working with various parties to further refine and update the Informative References illustrated in the Core. These updates are still pending."
- Is commenting on the current RFI, the primary way for the public to provide input to those updates on the informative references?

2) Something to considering for 1.1: In addition to the new supply chain category in the Identify function, where you identify your suppliers and the risks around that, it seems there should also be some supply chain categories or subcategories in the Protect Function - in terms of what critical infrastructure operators should be looking for from their suppliers as the supply chain is an integral part of **protecting** our critical infrastructure.

Thanks and Best Regards, ... Sally
