**Associate Professor of Computer Science**  
**University of Iowa**  
**Member and Past Chair,**  
**Iowa Board of Examiners for Voting**  
**Machines and Electronic Voting Systems**

- 
- 
- We cannot extend unsupervised trust to anyone
  - Without effective oversight, trust will be abused (Enron, Worldcom and others)
  - We trust cooperating adversaries in 2-party systems
  - The problems lie in administrative rules as much as they lie in voting system standards

# Who must we trust today:

- The FEC/NASED source code auditor
  - An impossible job (SAIC)
  - 2 strikes out of 2 (Compuware)
- Every other step exempt from sunshine
  - Closing the polls (Georgia, California)
  - Pre-election setup (many states)
