Subject:	Feedback	NIST CSF 2.0 Core - Discussion Draft

Hi. Some feedback for the NIST CSF 2.0 Core

There is a lack of inclusion of Cyber Threat Intel. It doesn't sit naturally where it is currently mentioned in passing in the sub-categories; it is not a 'cyber security outcome'. Perhaps it would sit well as a separate Function ('Predict' maybe?), paired with Risk in same, rather than Identify. Or if not as part of a 'Predict' Function then a new category in Identify to sit alongside Risk Assessment, where it can be broken out and detailed more appropriately as a NIST 2.0 categegory eg ID.TI

Looking forward to seeing the final 2.0 product.

cheers

Ben Full
