# SQLite Data Recovery Specification, Test Assertions, and Test Cases

Version 1.0

35 **Disclaimer**

36

37 Certain commercial entities, equipment, or materials may be identified in this document in order to  
38 describe an experimental procedure or concept adequately. Such identification is not intended to  
39 imply recommendation or endorsement by the National Institute of Standards and Technology, nor  
40 is it intended to imply that the entities, materials, or equipment are necessarily the best available for  
41 the purpose.

42 **Abstract**

43  
44 This specification defines requirements, test assertions, and test cases for basic methods of  
45 recovering and reporting evidence as contained within SQLite databases. This also includes their  
46 associated journal mode log files. The specification does not address more advanced methods of  
47 recovery of data as stored in these files. Today, millions of different applications reside on  
48 smartphones, computers, and IoT devices that all store data in this format.

49  
50 This document defines SQLite forensic data recovery tool requirements. These requirements are  
51 used to derive test assertions, statements of conditions that are then checked after a test case is run.  
52 Each test assertion is covered by one or more test cases consisting of a test protocol and the  
53 expected test results. The test case protocol specifies detailed procedures for setting up the test,  
54 executing the test, and measuring the test results.

55  
56 Thanks and appreciation to Sam Brothers for his collaboration with co-authoring the SQLite Data  
57 Recovery and assistance in designing SQLite datasets for testing purposes.

58  
59 Comments and feedback are welcome. This document, and future revisions, are available for  
60 download at: [https://www.cftt.nist.gov/SQLite\\_Forensic\\_Tools.htm](https://www.cftt.nist.gov/SQLite_Forensic_Tools.htm).

77 **1 Introduction**

78 There is a critical need in the law enforcement community to ensure the reliability of computer  
79 forensic tools. A capability is required to ensure that forensic tools consistently produce accurate,  
80 repeatable, and objective test results. The goal of the Computer Forensic Tool Testing (CFTT) project  
81 at the National Institute of Standards and Technology (NIST) is to establish a methodology for testing  
82 computer forensic tools by the development of functional specifications, test procedures, test criteria,  
83 and test sets. The results provide the information necessary for toolmakers to improve tools, for users  
84 to make informed choices about acquiring and using computer forensics tools, and for interested  
85 parties to understand the tools' capabilities. This approach for testing computer forensic tools is based  
86 on well-recognized international methodologies for conformance testing and quality testing. This  
87 project is further described at <http://www.cftt.nist.gov/>.

88  
89 The Computer Forensics Tool Testing (CFTT) program is a joint project of the Department of  
90 Homeland Security (DHS) Science and Technology Directorate, and the National Institute of  
91 Standards and Technology.

92 **2 Purpose**

93 This specification defines requirements, test assertions, and test cases for SQLite Data Recovery  
94 (SDR) Forensics Tools capable of performing the following tasks:

- 95  
96 1. Displaying recovered SQLite database information to the user,  
97 2. identifying, categorizing, and reporting upon Write-Ahead Log (WAL) and Rollback Journal  
98 data, and  
99 3. sequencing wal journal data.

100  
101 The requirements are used to derive test assertions, statements of conditions that are checked after a  
102 test case is run. Each test assertion is covered by one or more test cases consisting of a test protocol  
103 and the expected test results. The test case protocol specifies detailed procedures for setting up the  
104 test, executing the test, and measuring the test results.

105 **3 Scope**

106 The scope of this specification is limited to software tools capable of presenting recovered data stored  
107 within SQLite databases. This also includes stand-alone SQLite forensic tools that provide additional  
108 functionality. This specification is general and capable of being adapted to other database formats  
109 should they become more widely used.

110  
111 The intended audience for this document is forensic examiners with an existing basic knowledge of  
112 SQLite. This document does not address every detail about how SQLite works. Rather, the scope of  
113 this material is at a higher level. Should the reader be interested in additional file format details they  
114 can be found at: [www.sqlite.org](http://www.sqlite.org) or they should seek specialized SQLite forensics training.

115  
116 The topics covered within this specification addresses recovered SQLite data. The reporting of active  
117 SQLite data is commonplace in modern mobile forensic tools and therefore, covered in *Mobile Device  
118 Forensic Tool Specification, Test Assertions, and Test Cases*.

## 119 4 Definitions

120 This glossary defines terms used within this document.

121

122 **Active Data** – Table information that comprises the current state of the database (and all associated  
123 journal mode files) as of the latest successful commit.

124 **Binary Large Object (BLOB)** – A Binary Large Object is a string of binary data stored as a single  
125 entity within a database management system. BLOB's can typically be images, audio, plist or  
126 other multimedia objects.

127 **Commit** – This SQLite command is the transactional command used to save changes invoked by a  
128 transaction to the database.

129 **Data Element** – Data contained in a single cell of a row in the table of a given SQLite database.

130 **Journal Mode** – Functionality that provides rollback abilities in accordance with Atomic,  
131 Consistent, Isolated, and Durable (ACID) transactions. This refers to either a -journal or -wal  
132 file.

133 **Journal Sequencing** – Ordering of transactions within the -wal journal file and any related data in  
134 the database.

135 **Page** – A fixed-size contiguous block of data within an SQLite database, WAL, or journal file. The  
136 size of a page is a power of two between 512 and 65,536 bytes. All pages within a database are  
137 of the same size.

138 **Recoverable Row** – This refers to row data in the SQLite database and its associated journal mode  
139 file that is no longer active. Either through row deletion or row modification.

140 **Recovered Data** – Table information that is not part of the current state of the database and all  
141 associated journal mode file(s) as of the latest commit.

142 **Rollback Journal** – This file is associated with an SQLite database that holds information used to  
143 restore the database to its previous state during a transaction while in journal mode. The setting  
144 of the journal\_mode **PRAGMA** can be used to determine if a rollback journal is being used.  
145 This file resides in the same folder as the database and has the string “-journal” appended to its  
146 filename.

147 **SQLite** – SQLite is an embedded SQL relational database engine that implements a self-contained,  
148 serverless, zero-configuration, transactional SQL database engine.

149 **Table** – A data structure that organizes information into rows and columns. It can be used to store  
150 and display data in a structured format.

151 **Vacuum** – A command that rebuilds the database file, repacking it into a minimal amount of disk  
152 space. When a vacuum occurs, data may be overwritten or deleted.

153 **WAL Timelining** – See Journal Sequencing.

154 **Write-Ahead Log (WAL)** – A file that records SQLite transactions that have been committed, but  
155 not yet applied to the database. This file is in the same directory as the database with the string “-  
156 wal” appended to its filename. As of version 3.7.0 (dated 7/21/2010) this file type is the most  
157 commonly used method when SQLite journaling mode is enabled.

158 **5 Requirements**

159 This section lists the SQLite Data Recovery Tool requirements. There are requirements for core  
160 features that all tools must meet and requirements for optional features as well. The requirements  
161 for optional features only apply if the tool supports the feature.

162 **5.1 Required Features**

163 The following requirements shall be met by all tools:

- 164
- 165 SFT-CR-01. The tool shall not modify the files being analyzed.
- 166 SFT-CR-02. The tool shall report the database configuration parameters pertinent to data recovery.
- 167 SFT-CR-03. The tool shall report the schema structure of the database tables.
- 168 SFT-CR-04. The tool shall report the data content of all recovered rows of any table in the  
169 database.
- 170 SFT-CR-05. The tool shall report the source for all recovered data elements.
- 171

172 **5.2 Optional Features**

- 173
- 174 SFT-RO-01. The tool shall report additional schema data within the database for all recovered data.
- 175 SFT-RO-02. The tool shall report the metadata for all recovered rows.
- 176 SFT-RO-03. The tool shall report the detailed metadata for all recovered data elements.
- 177 SFT-RO-04. The tool shall be able to perform journal sequencing (or wal timelining) of the  
178 associated -wal journal mode file.
- 179

180 **6 Test Assertions**

181 Here is a set of test assertions based on the requirements:

182

183 **6.1 Core Assertions**

184

<b>Assertion</b>	<b>Req</b>
SFT-CA-01. The MD5 (or SHA-1) hash value of the database and associated journal mode file (e.g., -journal, -wal) shall not be altered between when analysis begins and analysis is complete.	CR-01
SFT-CA-02. The associated journal mode file (e.g., -journal, -wal) shall not be deleted after analysis is complete.	CR-01
SFT-CA-03. The tool shall interpret the SQLite Page Size (in bytes).	CR-02
SFT-CA-04. The tool shall report the SQLite Journal Mode (write version)	CR-02
SFT-CA-05. The tool shall report the SQLite Journal Mode (read version)	CR-02
SFT-CA-06. The tool shall report the number of pages in the database	CR-02
SFT-CA-07. The tool shall report the SQLite database text encoding.	CR-02
SFT-CA-08. The tool shall report all table names for each table within the database.	CR-03
SFT-CA-09. The tool shall report all column names for each table in the database.	CR-03
SFT-CA-10. The tool shall report the number of rows for each table in the database.	CR-03

SFT-CA-11. The tool shall report on all recoverable rows that are contained within the database.	CR-04
SFT-CA-12. The tool shall report on all recoverable rows that are contained within the associated journal mode file (e.g., -journal, -wal).	CR-04
SFT-CA-13. The tool shall report the source file name for each recovered data element.	CR-05

185

186

187

## 6.2 Optional Test Assertions

<b>Test Assertions for Optional Features</b>		<b>Req</b>
SFT-AO-01. The tool shall report all CREATE TABLE statements for each table in the database.		RO-01
SFT-AO-02. The tool shall report the data type for each column within each table in the database.		RO-01
SFT-AO-03. The tool shall report which column is the primary key for each table in the database.		RO-01
SFT-AO-04. The tool shall report if the row was recovered because of a deletion or an update within the database.		RO-02
SFT-AO-05. The tool shall report if the row was recovered because of a deletion or an update in the associated journal mode file (e.g., -journal, -wal).		RO-02
SFT-AO-06. The tool shall report the file offset for each recovered data element presented.		RO-03
SFT-AO-07. The tool shall report the table name for each recovered data element presented.		RO-03
SFT-AO-08. The tool shall be able to present the sequence of transactions in the associated -wal file.		RO-04

188

## 7 SQLite Forensics Tool Test Cases

Core Test Cases	Assert
<p>SFT-01. SQLite header parsing. This test case verifies that the tool provides the following (5) attributes as contained in the SQLite header:</p> <ul style="list-style-type: none"> <li>▪ Page Size</li> <li>▪ Journal Mode Information</li> <li>▪ Number of Pages</li> <li>▪ Text Encoding (i.e., UTF-8, UTF-16 Little Endian, and UTF-16 Big Endian)</li> </ul> <p><i>Note: Header results will remain consistent when journal_mode is set to any of the following: DELETE, MEMORY, OFF, PERSIST or TRUNCATE.</i></p> <p><i>Test Actions: SFT-01-UTF8-WAL – Create SQLite file with specified parameters.</i></p> <ol style="list-style-type: none"> <li>1. SQLITE3 SFT-01-UTF8-WAL.sqlite</li> <li>2. PRAGMA journal_mode = WAL</li> <li>3. PRAGMA encoding = 'UTF-8';</li> <li>4. PRAGMA page_size = 4096;</li> <li>5. Create Table</li> <li>6. Create 100 Rows of Data within Table</li> <li>7. .quit</li> <li>8. Read header and validate: Page Size, Journal Mode, Number of Pages, and Encoding.</li> <li>9. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Test Actions: SFT-01-UTF16BE-PERSIST – Create SQLite file with specified parameters.</i></p> <ol style="list-style-type: none"> <li>1. SQLITE3 SFT-01-16BE-PERSIST.sqlite</li> <li>2. PRAGMA journal_mode = PERSIST</li> <li>3. PRAGMA encoding = 'UTF-16be';</li> <li>4. PRAGMA page_size = 1024;</li> <li>5. Create Table</li> <li>6. Create 100 Rows of Data within Table</li> <li>7. .quit</li> <li>8. Read header and validate: Page Size, Journal Mode, Number of Pages, and Encoding.</li> <li>9. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Test Actions: SFT-01-UTF16LE-OFF – Create SQLite file with specified parameters.</i></p> <ol style="list-style-type: none"> <li>1. SQLITE3 SFT-01-16LE-OFF.sqlite</li> <li>2. PRAGMA journal_mode = OFF</li> </ol>	<p>CA-01 CA-03 CA-04 CA-05 CA-06 CA-07</p>

<ol style="list-style-type: none"> <li>3. PRAGMA encoding = 'UTF-16le';</li> <li>4. PRAGMA page_size = 8192;</li> <li>5. Create Table</li> <li>6. Create 100 Rows of Data within Table</li> <li>7. .quit</li> <li>8. Read header and validate: Page Size, Journal Mode, Number of Pages, and Encoding.</li> <li>9. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Conformance Indicator:</i> Data reported matches data contained within header as specified in each test action.</p>	
<p>SFT-02. SQLite Schema Reporting. This test case verifies that the tool provides a listing of all:</p> <ol style="list-style-type: none"> <li>1. Tables</li> <li>2. Column names for each table</li> <li>3. Row information for each table</li> </ol> <p><i>Test Actions:</i> SFT-02 – Schema Reporting</p> <ol style="list-style-type: none"> <li>1. Using SFT-01-UTF8-WAL.sqlite, SFT-01-UTF16BE-PERSIST and SFT-01-UTF16LE-OFF</li> <li>2. Read table data and validate: Table Names, Column Names, and number of rows.</li> <li>3. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Conformance Indicator:</i> Data reported matches data contained within the database as specified in each test action.</p>	CA-01 CA-08 CA-09 CA-10
<p>SFT-03. SQLite Recoverable Rows This test case verifies that the tool reports the file name (e.g., source) and recovered information for all recoverable rows (e.g., deleted and updated):</p> <ul style="list-style-type: none"> <li>▪ SQLite database file</li> <li>▪ SQLite database journal mode file (e.g., -journal, -wal)</li> </ul> <p><i>Test Actions:</i> SFT-03-PERSIST – Create SQLite file with an associated -journal file.</p> <ol style="list-style-type: none"> <li>1. SQLITE3 SFT-03-PERSIST.sqlite</li> <li>2. PRAGMA journal_mode = PERSIST</li> <li>3. Create Table</li> <li>4. Create ~2,000 rows of data within table</li> <li>5. Delete 100 rows (randomly)</li> <li>6. Modify 100 rows (randomly)</li> <li>7. Perform SQLite database recovery</li> </ol>	CA-01 CA-02 CA-11 CA-12

<p>8. Validate reporting of 100 deleted rows and 100 modified rows.</p> <p>9. If files have changed, investigate each set of test actions to determine where the change occurred.</p> <p><i>Test Actions: SFT-03-WAL – Create SQLite file with an associated -wal file.</i></p> <ol style="list-style-type: none"> <li>1. SQLITE3 SFT-03-WAL.sqlite</li> <li>2. PRAGMA journal_mode = WAL</li> <li>3. Create Table</li> <li>4. Create ~2,000 rows of data within table</li> <li>5. Modify 100 rows (randomly)</li> <li>6. BEGIN TRANSACTION; Delete 100 rows (randomly) END TRANSACTION;</li> <li>7. Stop the SQLite process (i.e., close command/console window or CTRL-C)</li> <li>8. Perform SQLite database recovery</li> <li>9. Validate reporting of 100 deleted rows and 100 modified rows.</li> <li>10. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Conformance Indicator: Data reports deleted and modified row data as specified in each test action.</i></p>	
<p>SFT-04. SQLite Data Element metadata</p> <p>This test case verifies that the tool reports the file name (e.g., source) for all recovered data elements:</p> <ul style="list-style-type: none"> <li>▪ SQLite database file</li> <li>▪ SQLite database journal mode file (e.g., -journal, -wal)</li> </ul> <p><i>Test Actions: SFT-04 – PERSIST</i></p> <ol style="list-style-type: none"> <li>1. Using SFT-03-PERSIST.sqlite and SQLITE3 SFT-03-PERSIST.sqlite-journal</li> <li>2. Perform SQLite database recovery</li> <li>3. Verify that tool reports the file name (e.g., source) where each recoverable data element is located.</li> <li>4. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Test Actions: SFT-04 – WAL</i></p> <ol style="list-style-type: none"> <li>1. Using SFT-03-WAL.sqlite and SQLITE3 SFT-03-WAL.sqlite-wal</li> <li>2. Perform SQLite database recovery</li> <li>3. Verify that tool reports the file name (e.g., source) where each recoverable data element is located.</li> <li>4. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Conformance Indicator: Data reports deleted and modified row data as specified in each test action.</i></p>	<p>CA-01 CA-02 CA-13</p>

<b>Optional Test Cases</b>	
<p><b>SFT-05. SQLite schema data reporting</b>  This test case verifies that the tool reports the SQLite metadata for all create table statements and type (e.g., Storage Class, datatype, or affinity) for each column, and that it identifies which column is the primary key for each table in the database.</p> <p><i>Test Actions: SFT-05 – Schema Reporting</i></p> <ol style="list-style-type: none"> <li>1. SQLITE3 SFT-05.sqlite</li> <li>2. Create Table with at least (6) columns: Primary Key, Int, Float, Text, Blob, Boolean</li> <li>3. Create 100 Rows of Data within Table</li> <li>4. Read table data and report all create table statements, associated column types, and the primary key for each table.</li> <li>5. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Conformance Indicator: Data reported matches data contained within the database as specified in each test action.</i></p>	CA-01 AO-01 AO-02 AO-03
<p><b>SFT-06. Recovered row metadata</b>  This test case verifies that the tool reports the recovered row because of either a deletion or an update within the database file, or the associated journal mode file (e.g., -journal, -wal).</p> <p><i>Test Actions: SFT-06 – PERSIST</i></p> <ol style="list-style-type: none"> <li>1. Using SFT-03-PERSIST.sqlite and SQLITE3 SFT-03-PERSIST.sqlite-journal</li> <li>2. Perform SQLite database recovery</li> <li>3. Tool reports the file name (e.g., source) and if the row was the result of an update or a deletion.</li> <li>4. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Test Actions: SFT-06 – WAL</i></p> <ol style="list-style-type: none"> <li>1. Using SFT-03-WAL.sqlite and SQLITE3 SFT-03-WAL.sqlite-wal</li> <li>2. Perform SQLite database recovery</li> <li>3. Tool reports the file name (e.g., source) and if the row was the result of an update or a deletion.</li> <li>4. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Conformance Indicator: Recovered information matches the actions from each test case.</i></p>	CA-01 CA-02 AO-04 AO-05
<p><b>SFT-07. SQLite recovered data information</b></p>	CA-01 CA-02

<p>This test case verifies that the tool reports the following metadata for all recoverable data elements:</p> <ol style="list-style-type: none"> <li>1. Offset within the file</li> <li>2. Identify the table name associated with the row</li> </ol> <p><i>Test Actions: SFT-07 – PERSIST</i></p> <ol style="list-style-type: none"> <li>1. Using SFT-03-PERSIST.sqlite and SQLITE3 SFT-03-PERSIST.sqlite-journal</li> <li>2. Perform SQLite database recovery</li> <li>3. Tool reports the offset and length of the data within the payload for each recovered cell.</li> <li>4. Tool reports the table name for each row of recovered data.</li> <li>5. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Test Actions: SFT-07 – WAL</i></p> <ol style="list-style-type: none"> <li>1. Using SFT-03-WAL.sqlite and SQLITE3 SFT-03-WAL.sqlite-wal</li> <li>2. Perform SQLite database recovery</li> <li>3. Tool reports the offset and length of the data within the payload for each recovered cell.</li> <li>4. Tool reports the table name for each row of recovered data.</li> <li>5. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Conformance Indicator: Recovered metadata matches the actions from each test case.</i></p>	<p>AO-06 AO-07</p>
<p>SFT-08. Journal sequencing/wal timelining</p> <p>This test case verifies that the tool reports the sequence of transactions in the associated -wal file.</p> <p><i>Test Actions: SFT-08 – WAL</i></p> <ol style="list-style-type: none"> <li>1. Using SFT-03-WAL.sqlite and SQLITE3 SFT-03-WAL.sqlite-wal</li> <li>2. Perform SQLite database recovery</li> <li>3. Order recovered transactions within the -wal journal file.</li> <li>4. If files have changed, investigate each set of test actions to determine where the change occurred.</li> </ol> <p><i>Conformance Indicator: Recovered data is sequenced matching the chronological actions executed during testing (SFT-08-WAL).</i></p>	<p>CA-01 CA-02 AO-08</p>
