

Five Years of Interoperability

Event Partners

Get "plugged in" to the only U.S. conference dedicated entirely to the progress of Smart Grid interoperability.

Cyber security. Technology compatibility. Low-cost Smart Grid solutions. All depend on interoperability standards that are well planned, well defined, and well executed. And Grid-Interop has been at the forefront of these collaborative discussions for the past five years.

Held in partnership with the Smart Grid Interoperability Panel and the GridWise Architecture Council, Grid-Interop:

- ▶ **Is the key annual event** focused on Smart Grid interoperability standards.
- ▶ **Attracts a broad audience from government and the technical community**, including utility, software, cable, semiconductor, telecommunications and electricity consumer sector companies and organizations.
- ▶ **Provides a collaborative, working forum** to discuss, debate, and determine the best path forward for the development of interoperable components of a Smart Grid.
- ▶ **Will focus on examples of interoperability implementation** in 2011.

New in 2011!

The Grid-Interop Plug-In will demonstrate interoperability success stories in a working environment, providing a literal show-and-tell of standards-based interoperable products and systems today. [Read more here >](#)
