Abstract—Modern research in the sciences, engineering, humanities, and other fields depends on software, and specifically, research software. Much of this research software is developed in universities, by faculty, postdocs, students, and staff. In this paper, we focus on the role of university staff. We examine three different, independently-developed models under which these staff are organized and perform their work, and comparatively analyze these models and their consequences on the staff and on the software, considering how the different models support software engineering practices and processes. This information can be used by software engineering researchers to understand the practices of such organizations and by universities who want to set up similar organizations and to better produce and maintain research software.

1. INTRODUCTION

Modern research in the sciences, engineering, humanities, and other fields depends on software, and specifically, research software. The NSF made 18,592 awards totaling \$9.6 billion to projects that mentioned “software” in their abstracts between 1995 and 2016 [1]. An examination of 40 papers in Nature from January to March 2016 showed that 32 explicitly mentioned software, with each paper mentioning an average of 6.5 software tools, almost all of which were research software [2]. Two surveys, of academics and Russell Group Universities in the UK [3] and members of the National Postdoctoral Association in the US [4] found that about 2/3 of respondents said they couldn’t do their research without software, while about 1/3 said they could, but it would be much more difficult, and only a few percent said it would make no difference.

Research software is most often produced by researchers themselves, often within academia, by faculty, staff, postdocs, and students. While the academic environment and culture have developed over hundreds of years, software is much more recent. Many software projects are also developed and maintained over a longer time period than the academic tenure of any postdoc or student, and sometimes longer than staff and faculty as well. And until fairly recently, most software was developed in an ad hoc manner, without frameworks and tools (such as GitHub, science gateways, developer environments,

In 2012, a small group in the UK attending the Software Sustainability Institute (SSI) Collaborations Workshop (<http://software.ac.uk/cw12>) came together to address the question: why is there no career for software developers in academia? [5] The group members then wrote about their ideas on the people they were talking about, calling them Research Software Engineers (RSEs), their potential career paths, how their work is funded, and the challenges they face. [6] The SSI’s policy challenge in 2013, which led to the formation of the UK Research Software Engineers (UK RSEs) network, was to address the question: how can we support the number of members of the UK RSE network to grow from 2013 to 633 in August 2016 to 1,275 in August 2017? [7] The UK RSEs typically fit one of two models: either embedded in research groups or as a central organization in their institutions, supporting various research projects on a short-term basis.

Geospatial Software

General Software

The screenshot shows a Microsoft Excel spreadsheet with a table of route data. A red box highlights the data from row 1 to row 13, columns A to E. To the right of the spreadsheet is a 'Brown Dog' service panel titled 'Green Route Index'. The panel contains instructions for using the service, a text input field for an access token, a 'Submit Selection' button, and a list of generated metadata files.

Route	Lat	Long	Green Index	Orientation
1	40.11123	-88.17377	30.8	0
1	40.11123	-88.17377	37.7	90
1	40.11123	-88.17377	38.9	180
1	40.11123	-88.17377	27.6	270
1	40.11202	-88.17488	32.1	270
1	40.11202	-88.17488	20.9	180
1	40.11202	-88.17488	32.2	0
1	40.11202	-88.17488	47.1	90
1	40.11289	-88.17517	31.6	0
1	40.11289	-88.17517	16.9	90
1	40.11289	-88.17517	19.9	270
1	40.11289	-88.17517	24.1	180

Brown Dog

Green Route Index

1. Provide an Access Token:
2. Select cells in the sheet as a 2 column list of latitude, longitude pairs along a path.
3. Submit to Brown Dog service. A new sheet will be added to the workbook with the results once they are ready.

Clowder (2013-Present)

NSF Innovative Systems and Software: Applications to NARA Research Problems (OCI-0525308)

The screenshot shows the Clowder homepage in a browser window. The address bar displays <https://clowder.ncsa.illinois.edu/clowder/>. The page features a blue header with the Clowder logo, navigation links for 'Explore' and 'Help', a search bar, and buttons for 'Sign up' and 'Login'. The main content area includes a 'Welcome to Clowder' section with a paragraph of introductory text. A 'Resources' sidebar on the right lists categories: Spaces, Collections, Datasets, Files, Bytes, and Users. At the bottom, it states 'Powered by Clowder (1.3.2#16 branch:master sha1:b7a81e8)'.

Welcome to Clowder

Welcome to Clowder, a scalable data repository where you can share, organize and analyze data. This is a demo instance to try the system out. Please do not use this instance to store real data. We delete the content of this instance when we need to and it does not have very much disk space available. Thank you.

Powered by [Clowder](#) (1.3.2#16 branch:master sha1:b7a81e8).

The screenshot shows a file page in Clowder. The browser address bar shows the file URL: <https://clowder.ncsa.illinois.edu/clowder/files/5a1f1481e4b0cfb1ad158e1f?dataset=5a1d7faae4b0cfb1ad158e1f>. The file is named '6011937799.jpg'. The main content area displays a thumbnail of an aerial photograph from Google Earth. A right-hand sidebar provides metadata: Type: image/jpeg, File size: 494.8 kB, Uploaded on: Nov 29, 2017 14:11:45, Uploaded by: Bardia Heidari Haratmeh, Status: PROCESSED. Below this, the license is listed as 'All Rights Reserved' with holder 'Bardia Heidari Haratmeh'. A section titled 'Dataset containing the file' shows a link to 'GI identification dataset'. At the bottom, there are tags, including 'Bioswale Detected [Section]'.

• Bioswale Detected [Section]

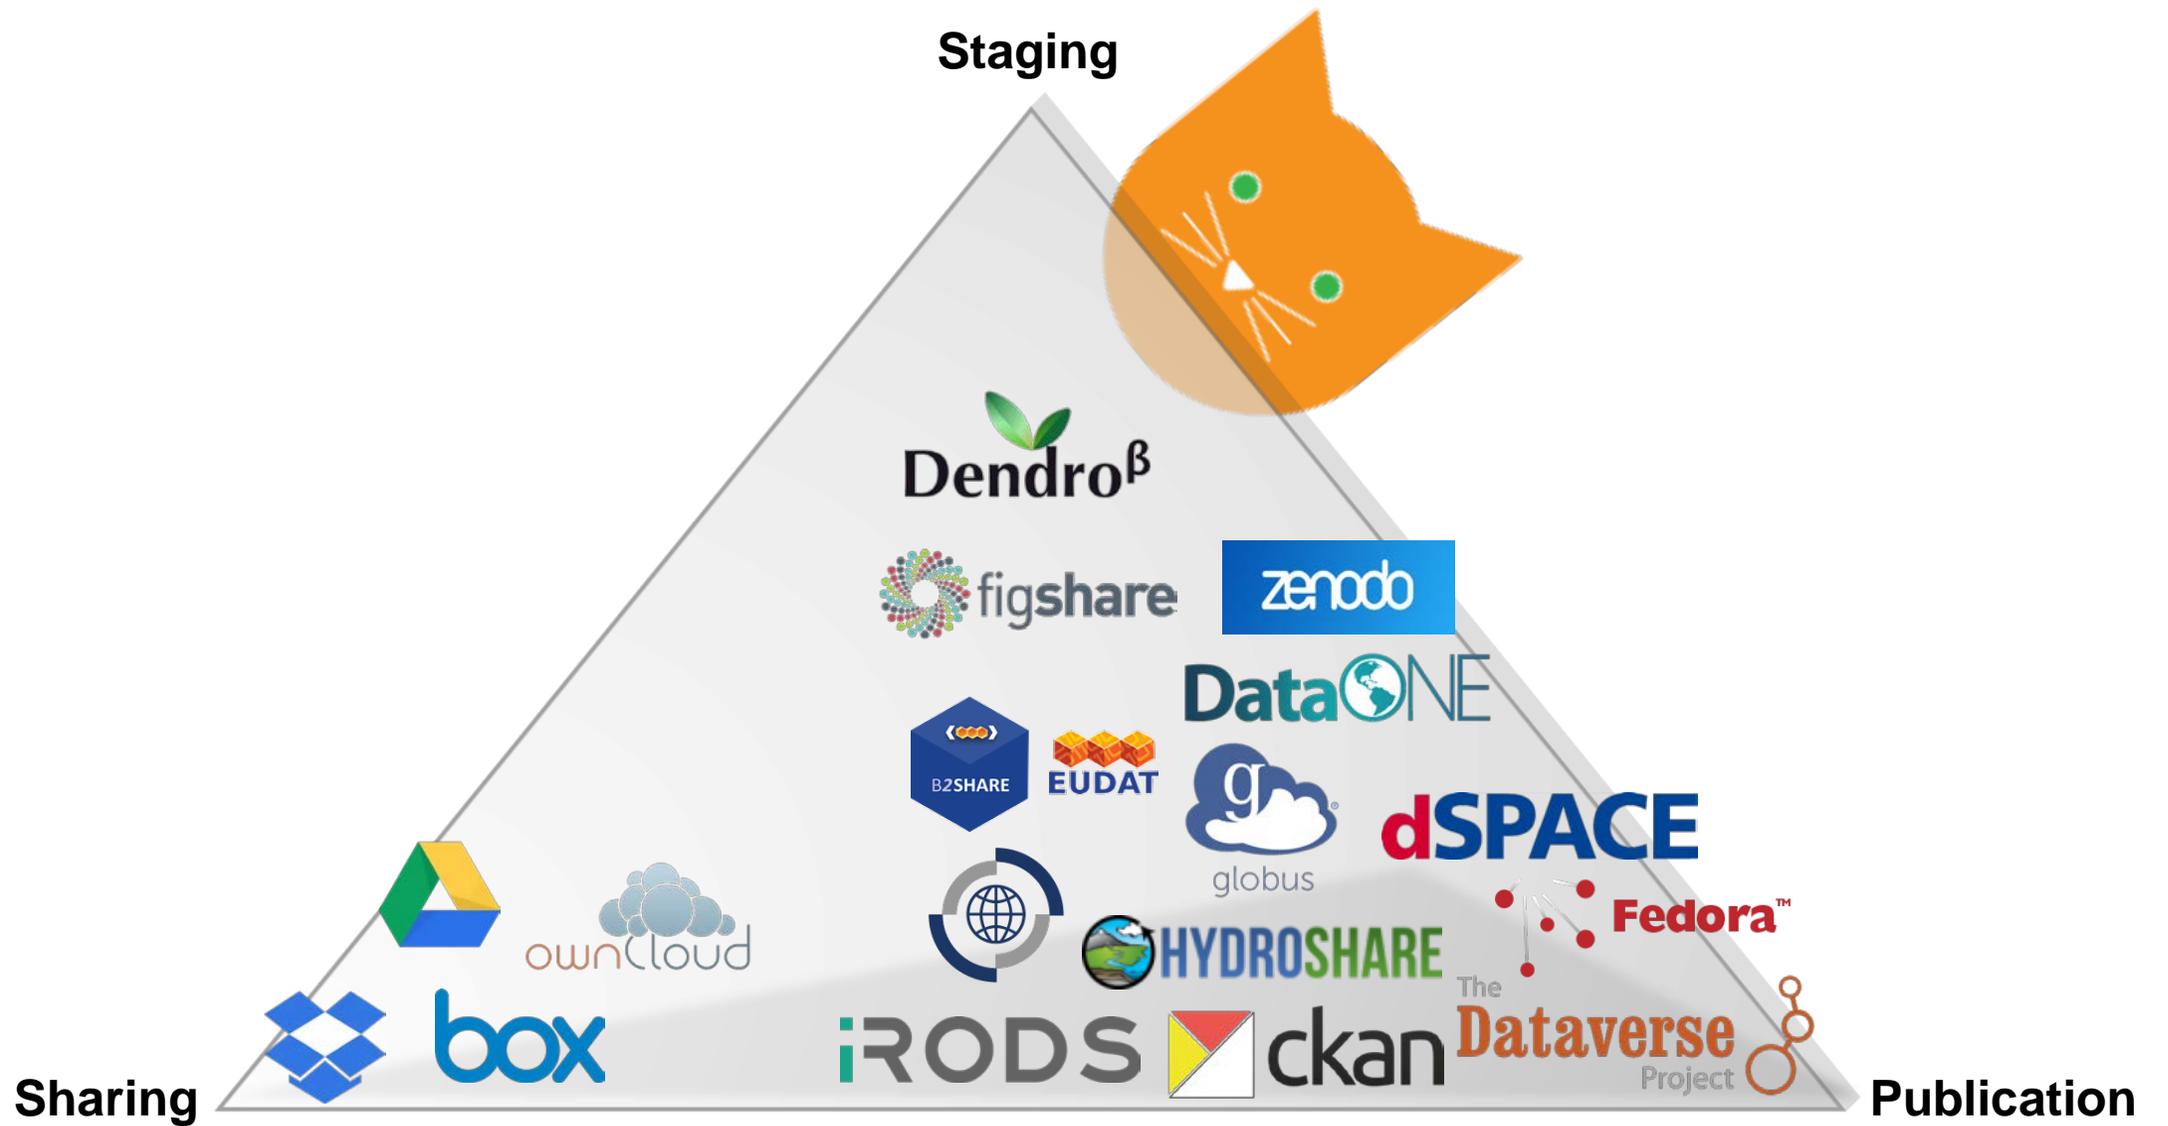

- **Active curation (AC)** involves recording data and metadata as close to the source as practical and driving that acquisition through the deployment of capabilities that help data producers manage their research.

Machine Learning

- **Social Curation (SC)** drives this economic analysis further, looking at ways that crossgroup interactions can further motivate best practices.

Custom Community Dashboards

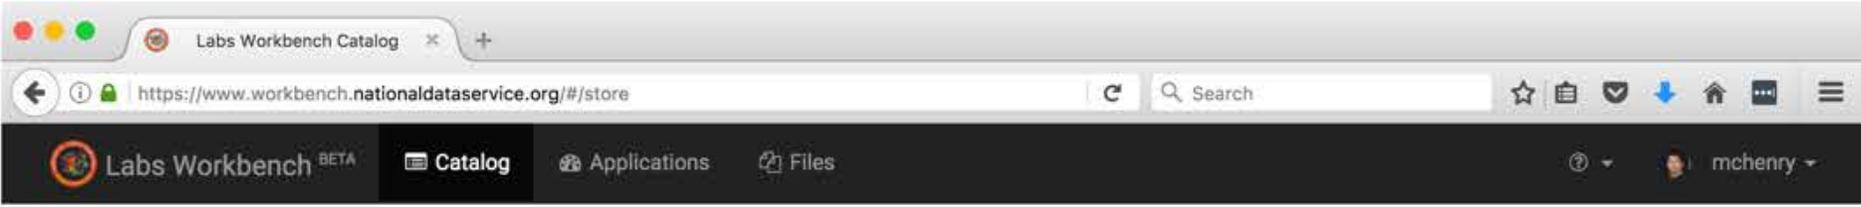

The image shows two overlapping web dashboards. The top one is 'Great Lakes Monitoring' with a blue header and navigation buttons for 'EXPLORE', 'COMPARE', 'SEARCH', and 'ABOUT'. Below it is the 'Great Lakes to Gulf VIRTUAL OBSERVATORY' with a similar layout and a map of the Great Lakes region. A third dashboard, 'CZO INTENSIVELY MANAGED LANDSCAPES CRITICAL ZONE OBSERVATORY', is overlaid on the bottom right, featuring a map of a landscape with a data popup for 'ISWS106' showing parameters like Nitrate-N, Stream pH, and Water temp. A sidebar on the left lists various data sources like 'EPA Pollutant Loading (EPA)' and 'Gustavus Adolphus'.

This section displays two overlapping web dashboards. The top one is 'CHICANA POR MI RAZA' with a red header and navigation for 'About', 'Partner', 'Mujeres', 'Historias', and 'Join the Collective'. Below it is a 'Data Mining' interface with a white background, showing a 'Method' dropdown (Decision Tree - J48), 'Attributes' (glucose), and 'Subjects' (H10C26, H10C53). A 'Submit' button is visible. A second window shows a 'My Datasets' mobile app interface with a blue header and a grid of dataset cards like 'SEM 2 June...', 'June 4', '3 June SEM', and 'June 2 SEM'. A line graph titled 'Subject: H9C56' is also visible, showing multiple data series over time.

Use Cases

Project	Average size of data entities	Total data volume	Storage problem being solved	Use case
Critical Zone Observatories	10 MB	50 TB	Provide storage space and access to CZO datasets and community-generated data	Community long-tail data
TerraFusion	10 GB	1 PB	Transport datasets across the US at high speed, obtain data slices with high probability of reutilization	Experiment-to-site, Slice-and-compute
HathiTrust Research Center collection	200 MB	500 TB	Provide storage space and access to the HTRC dataset and further community-generated derivatives	Common resource access
Machine Learning	10 GB	1 PB	Make available a well-curated dataset for testing machine learning algorithms	Dataset-as-benchmark
Large Synoptic Survey Telescope	2 TB	100 PB	Transport datasets across the US at high speed, obtain data slices with high probability of reutilization, facilitate inter-site data processing	Experiment-to-site, Slice-and-compute, Workflow staging space
Combined Array for Research in Millimeter Astronomy	50 MB	50 TB	Transport datasets across the US at high speed, obtain data slices with high probability of reutilization	Experiment-to-site, Slice-and-compute

OSN Clowder Interface

- IML-CZO use case data

kubernetes

A screenshot of a web browser displaying the OSN Clowder interface. The browser tab is titled "OSN IML CZO" and the address bar shows the URL "osn.clowderframework.org/spaces/5d9e11cee4b0a90763505...". The interface has a navigation bar with "OSN Clowder", "You", "Explore", "Create", "Selections", and "Help". The main content area is titled "OSN IML CZO" and includes a description: "Intensively Managed Landscapes Critical Zone Observatory. Intensively managed landscapes encompass agricultural, urban, and natural environments where human modifications of the landscapes intersect with the natural legacies of the land. The services on this page provide access to data managed by the IML-CZO." Below the description are action buttons: "Delete", "Create Dataset", "Create Collections", and "Search". The "Datasets in the Space" section shows "Viewing most recent datasets" and a "View All Datasets" link. Two dataset cards are visible: "Flux Tower Yearly Aggregates" with a description "Data aggregates based on data sent over Loggernet" and "Flux Tower Site Visit" with a description "Site visit on May 17th, 2016." On the right side, there are management options: "Manage Users", "Edit Space", "Manage Metadata Terms & Definitions", "Extractors", and "Follow". An "External Links" section contains the URL "http://data.imlczoo.org/".
