### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 39 (35%), Referenced to phase 2:EBT and 6:WBTL, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.99

Intersection Signal Delay: 34.9

Intersection LOS: C

Intersection Capacity Utilization 87.3%

ICU Level of Service E

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: I-81 SB Onramp/I-81 SB Offramp & Route 31

### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 47 (43%), Referenced to phase 2:EBTL and 6:WBT, Start of Yellow

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.21

Intersection Signal Delay: 55.6

Intersection LOS: E

Intersection Capacity Utilization 91.5%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: I-81 NB Offramp/Pardee Road & Route 31

# Lanes, Volumes, Timings

## 4: Route 31 & Lakeshore Road

## Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 23 (21%), Referenced to phase 2:EBTL and 6:WBT, Start of Yellow

Natural Cycle: 100

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.07

Intersection Signal Delay: 38.7

Intersection LOS: D

Intersection Capacity Utilization 96.8%

ICU Level of Service F

Analysis Period (min) 15

- ~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 4: Route 31 & Lakeshore Road

Lanes, Volumes, Timings  
5: South Bay Road & Route 31

### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 105.7

Natural Cycle: 100

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.92

Intersection Signal Delay: 39.4

Intersection LOS: D

Intersection Capacity Utilization 87.9%

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

### Splits and Phases: 5: South Bay Road & Route 31

### Intersection Summary

Area Type: Other

Cycle Length: 50

Actuated Cycle Length: 43.6

Natural Cycle: 50

Control Type: Semi Act-Uncoord

Maximum v/c Ratio: 0.64

Intersection Signal Delay: 10.7

Intersection LOS: B

Intersection Capacity Utilization 80.3%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

Splits and Phases: 6: Cicero Center Road & Route 31

### Intersection Summary

Area Type: Other

Cycle Length: 75

Actuated Cycle Length: 73.1

Natural Cycle: 75

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.90

Intersection Signal Delay: 30.0

Intersection LOS: C

Intersection Capacity Utilization 87.1%

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

### Splits and Phases: 8: Thompson Road & South Bay Road

### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 93 (85%), Referenced to phase 2:EBTL and 6:WBTL, Start of Yellow

Natural Cycle: 110

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 1.08

Intersection Signal Delay: 50.8

Intersection LOS: D

Intersection Capacity Utilization 96.6%

ICU Level of Service F

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

### Splits and Phases: 1: Route 11 & Route 31

### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 26 (24%), Referenced to phase 2:EBT and 6:WBTL, Start of Yellow

Natural Cycle: 90

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.98

Intersection Signal Delay: 34.9

Intersection LOS: C

Intersection Capacity Utilization 85.1%

ICU Level of Service E

Analysis Period (min) 15

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 2: I-81 SB Onramp/I-81 SB Offramp & Route 31

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 36 (33%), Referenced to phase 2:EBTL and 6:WBT, Start of Yellow

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.86

Intersection Signal Delay: 24.4

Intersection LOS: C

Intersection Capacity Utilization 81.0%

ICU Level of Service D

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: I-81 NB Offramp/Pardee Road & Route 31

# Lanes, Volumes, Timings

## 4: Route 31 & Lakeshore Road

### Intersection Summary

Area Type: Other

Cycle Length: 110

Actuated Cycle Length: 110

Offset: 44.5 (40%), Referenced to phase 2:EBTL and 6:WBT, Start of Yellow

Natural Cycle: 75

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.97

Intersection Signal Delay: 31.1

Intersection Capacity Utilization 87.6%

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.  
Queue shown is maximum after two cycles.

Intersection LOS: C  
ICU Level of Service E

### Splits and Phases: 4: Route 31 & Lakeshore Road

### Intersection Summary

Area Type: Other

Cycle Length: 120

Actuated Cycle Length: 112.4

Natural Cycle: 90

Control Type: Actuated-Uncoordinated

Maximum v/c Ratio: 0.90

Intersection Signal Delay: 43.5

Intersection LOS: D

Intersection Capacity Utilization 83.5%

ICU Level of Service E

Analysis Period (min) 15

# 95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

### Splits and Phases: 5: South Bay Road & Route 31

### Intersection Summary

Area Type: Other

Cycle Length: 50

Actuated Cycle Length: 43.6

Natural Cycle: 40

Control Type: Semi Act-Uncoord

Maximum v/c Ratio: 0.51

Intersection Signal Delay: 8.6

Intersection Capacity Utilization 77.6%

Analysis Period (min) 15

Intersection LOS: A

ICU Level of Service D

Splits and Phases: 6: Cicero Center Road & Route 31

### Intersection Summary

Area Type: Other  
 Cycle Length: 75  
 Actuated Cycle Length: 67.5  
 Natural Cycle: 60  
 Control Type: Actuated-Uncoordinated  
 Maximum v/c Ratio: 0.79  
 Intersection Signal Delay: 21.5  
 Intersection Capacity Utilization 69.5%  
 Analysis Period (min) 15

Intersection LOS: C  
 ICU Level of Service C

### Splits and Phases: 8: Thompson Road & South Bay Road

## Great Northern Mall Redevelopment Town of Clay, NY

The proposed development site is the former Great Northern Mall with additional properties to the east and north in the Town of Clay, NY. The overall project site is significantly vacant with the exception of BJ's Wholesale Club, Central NY Gym, Dunk & Bright Furniture Store, Wilkins RV of Clay, Olive Garden, IHOP and a self-storage facility on the Great Northern site, and a number of single family residential homes on Route 31/Morgan Road. The proposed redevelopment will be a mixed use development with commercial, medical, residential and entertainment space.

# TRAFFIC IMPACT STUDY

Prepared in Accordance With  
Chapter 5 of the NYSDOT Highway Design Manual (HDM)

## 1.0 Summary of Traffic Impacts

The following provides an overall breakdown of anticipated uses in the proposed redevelopment:

- General Retail – 523,360 SF
- Medical Office – 605,850 SF
- Ambulatory Care Facility – 150,000 SF
- Restaurants – 20,770 SF
- Grocery Store – 12,011 SF
- Community Center – 30,000 SF
- Apartments – 1,436 Units
- Hotels – 875 Rooms
- Senior Assisted Living – 200 Units
- Recreation / Entertainment – 67,890 SF

The existing access to the site includes two signalized driveways to NYS Route 31 and one unsignalized driveway to Morgan Road.

The proposed access to the development is as follows:

- Existing full access to NYS Route 31 opposite the Onondaga County Health Department
- Existing full access to Route 31 opposite Dunkin'/Lazy Boy
- Proposed full access to NYS Route 31 located 500 feet west of Morgan Road
- Proposed full access to Morgan Road located 750 feet north of NYS Route 31
- Existing full access to Morgan Road located 1,860 feet north of NYS Route 31 to remain
- Proposed full access to Verplank Road located 1,300 feet west of Morgan Road
- Proposed full access to Verplank Road located 1,800 feet west of Morgan Road
- Proposed full access to Verplank Road located 2,200 feet west of Morgan Road
- Proposed full access to Verplank Road located 2,500 feet west of Morgan Road

The proposed development includes a potential new interchange to NYS Route 481 at Verplank Road. It is noted that the attached concept plan (Appendix A) shows a traditional diamond interchange at Verplank Road, however, all ramps will need to be located on the north side of Verplank Road to optimize spacing from the NYS Route 31 interchange. Additionally, it is noted that the direct connection from the Great Northern Mall property to Route 481 northbound will not be allowed.

The traffic study evaluates the following six scenarios for the weekday morning, Friday evening, and Saturday midday peak travel hours.

- 2024 Existing Conditions
- 2034 Background Conditions – With Growth and Approved Developments
  - Include 300 Apts North of Kohls, Clay Marketplace, Delta Sonic, and Micron.
- 2034 Build Conditions
- 2034 Build Conditions with Verplank Road Interchange
- 2034 Build Conditions with Mitigation
- 2034 Build Conditions with Verplank Road Interchange – With Mitigation

A. A capacity analysis was performed per the NYSDOT Highway Design Manual Chapter 5. (Refer to Section 3 of this report):

The identified capacity deficiencies in the study area under the build conditions are notably the result of the combination of the projected Micron traffic and the Great Northern Mall redevelopment traffic.

To the west of the Route 481 interchange on NYS Route 31, the primary noted deficiency is a lack of capacity for the westbound through movement during the evening peak hour. The intersection of NYS Route 31 with Oswego Road is at or over capacity under the background conditions and is significantly impacted by the additional traffic generated by the proposed development. Some level of the recommended mitigation in this area should be contributed to by both developments.

The NYS Route 31/Route 481 interchange is at or over capacity under the background condition and is significantly impacted by the additional traffic generated by the Great Northern Mall redevelopment.

To the east of the site, there are significant failing operations at the Morgan Road intersections with NYS Route 31 and Verplank Road under the background conditions associated with the Micron development which continue to worsen with the additional site generated traffic. Some level of the recommended mitigation in this area should be contributed to both developments.

The following mitigation measures have been identified in the overall study area:

- NYS Route 31 @ Route 481 Interchange
  - o Reconstruct the interchange as a diverging diamond interchange (DDI) with signalized east/west crossings at the northbound and southbound ramps and signalized control at the left and right offramp movements both northbound and southbound.
    - Provide 3 through lanes eastbound from the Raymour & Flanigan intersection through the DDI, terminating the inside lane as the outside left turn lane into the Great Northern Mall west driveway.
    - Remove the existing eastbound right turn only lane at Marketfair North.
    - Provide 3 through lanes westbound from the Great Northern Mall east driveway through the DDI, terminating the third lane after the Delta Sonic/Texas Roadhouse signalized intersection.
    - Maintain the auxiliary westbound right turn lanes at Great North Mall West, Wegmans, Carling Road, Dell Center Drive, and Home Depot.
  - o Extend Pepperidge Way (Carling Road) to Soule Road opposite the Route 481 southbound onramp.
    - Convert Soule Road to southbound only between NYS Route 31 and the Route 481 southbound onramp.
    - Convert the existing northbound lane on Soule Road at the Route 481 southbound onramp to left turn only movements onto the roadway extension.
    - Construct a 200 foot northbound right lane on Soule Road at the Route 481 onramp with channelization and yield control.
    - Restrict the eastbound Pepperidge Way extension to right turn only movements onto Soule Road southbound.
    - Update the traffic signal at the Soule Road/Route 481 southbound onramp as necessary to accommodate the revised layout.
- NYS Route 31 @ Caughdenoy Road
  - o Add protected/permitted eastbound left turn phasing.

- o Construct a 200 foot southbound right turn lane.
- NYS Route 31 @ Henry Clay Boulevard
  - o Construct a 2<sup>nd</sup> northbound left turn lane.
- NYS Route 31 @ Morgan Road
  - o Construct second northbound and southbound through lanes through the intersection.
  - o Construct a 2<sup>nd</sup> northbound left turn lane.
  - o Construct a 250 foot southbound right turn lane.
  - o Construct a 250 foot westbound right turn lane.
- NYS Route 31 @ Proposed Access
  - o Restrict left turns exiting the site.
- NYS Route 31 @ Great Northern Mall East Access
  - o Construct a 300 westbound right turn lane.
  - o Construct a 2<sup>nd</sup> southbound left turn lane.
- NYS Route 31 @ Carling Road
  - o Construct a 250 foot northbound right turn lane.
- NYS Route 31 @ Oswego Road
  - o Construct a 250 foot eastbound right turn lane.
  - o Construct a 250 foot westbound right turn lane.
  - o Construct a 2<sup>nd</sup> northbound right turn lane.
- Verplank Road @ Caughdenoy Road
  - o Construct a 200 foot northbound left turn lane.
  - o Install a two phase traffic signal.
- Verplank Road @ Henry Clay Boulevard
  - o Install a two phase traffic signal.
- Verplank Road @ Morgan Road
  - o Construct a 200 foot northbound right turn lane.
  - o Construct a 200 foot westbound right turn lane.
  - o Install a two phase traffic signal.
- Morgan Road @ Existing Site Access
  - o Construct a 200 foot eastbound right turn lane.
  - o Install a two phase traffic signal.
- Verplank Road @ Route 481 Northbound Ramps (Verplank Interchange Only)
  - o Construct a 200 westbound right turn lane.

With the proposed modifications noted above, all traffic movements are generally projected to operate consistent with background traffic operations at both the signalized and unsignalized intersections in the study area. The Verplank interchange is a critical feature in the mitigation as it is projected to draw 400-500 vehicles away from the NYS Route 31 corridor during the peak hours.

- B. A crash analysis was performed per Highway Design Manual Chapter 5 on the following roadway segments in the study area:

- NYS Route 31 from Oswego Road to Caughdenoy Road
- Verplank Road from Oswego Road to Caughdenoy Road
- Oswego Road from Verplank Road to Soule Road
- Soule Road from Oswego Road to NYS Route 31
- Morgan Road from NYS Route 31 to Verplank Road
- Henry Clay Boulevard from NYS Route 31 to Verplank Road
- Caughdenoy Road from NYS Route 31 to Verplank Road

Refer to Section 4.0 of this report.

## 2.0 Operational Data – Existing Conditions

### 2.1 Travel Speeds

The posted speed limits in the study area around the site are 40 mph along NYS Route 31, 35 mph along Verplank Road, and 45 mph on Morgan Road. Existing average and 85<sup>th</sup> percentile operating speeds on Morgan Road and Verplank Road were collected using ATR counters. Average and 85<sup>th</sup> percentile speeds on NYS Route 31 were reviewed and calculated based on 50 spot speed measurements that were collected passing the proposed site driveway location under off-peak, free flow conditions. The posted speed limits and the off-peak 85<sup>th</sup> percentile speeds, determined based on NYSDOT Highway Design Manual Chapter 5, Section 5.2, are shown in the table below.

| <b><i>Exhibit 1<br/>Speed Data</i></b> |                                  |                            |                                               |
|----------------------------------------|----------------------------------|----------------------------|-----------------------------------------------|
| <b><i>Street Name</i></b>              | <b><i>Location</i></b>           | <b><i>Posted Speed</i></b> | <b><i>Operating Speed<br/>Spot Speeds</i></b> |
| <i>NYS Route 31</i>                    | <i>West of<br/>Morgan Road</i>   | <i>40 mph</i>              | <i>EB – 40.5 mph<br/>WB – 49.5 mph</i>        |
| <i>Morgan Road</i>                     | <i>North of<br/>NYS Route 31</i> | <i>45 mph</i>              | <i>NB – 49 mph<br/>SB – 49 mph</i>            |
| <i>Verplank Road</i>                   | <i>West of<br/>Morgan Road</i>   | <i>35 mph</i>              | <i>EB – 50 mph<br/>WB – 49 mph</i>            |

### 2.2 Driveway Sight Distance

Sight lines looking east/west along NYS Route 31, north/south along Morgan Road, and east/west along Verplank Road from the existing and proposed unsignalized driveways were collected for comparison to design standards in order to confirm that adequate sight lines are available for safe ingress and egress from the site.

The following table provides a summary of the recommended sight distances along NYS Route 31, Morgan Road, and Verplank Road from the AASHTO A Policy on Design of Highways and Streets as well as the available sight distances based on field measurements. Operating speeds of 50 mph were used on all three roadways in the review. Recommended sight distance for left turn movements were adjusted to account for the two additional lanes to be crossed when turning out onto NYS Route 31, and the one additional lane to be crossed when turning left out onto Morgan Road.

| Sight Distance Summary                                      |                 |                               |                                   |                            |
|-------------------------------------------------------------|-----------------|-------------------------------|-----------------------------------|----------------------------|
| Location                                                    | Operating Speed | Direction                     | AASHTO Recommended Sight Distance | Available Sight Distance   |
| Proposed Driveway @<br>NYS Route 31 - Turning Left Out      | 50 mph          | Looking Left<br>Looking Right | 625 feet<br>625 feet              | 900+ feet<br>900+ feet     |

| Proposed Driveway #4 @<br>Verplank Road - Turning Right Out | 50 mph          | Looking Left                  | 480 feet                          | 625 feet                   |
| Proposed Driveway #3 @<br>Verplank Road - Turning Left Out  | 50 mph          | Looking Left<br>Looking Right | 555 feet<br>555 feet              | 1,000+ feet<br>900+ feet   |
| Proposed Driveway #3 @<br>Verplank Road - Turning Right Out | 50 mph          | Looking Left                  | 480 feet                          | 1,000+ feet                |
| Proposed Driveway #2 @<br>Verplank Road - Turning Left Out  | 50 mph          | Looking Left<br>Looking Right | 555 feet<br>555 feet              | 1,000+ feet<br>650+ feet   |
| Proposed Driveway #2 @<br>Verplank Road - Turning Right Out | 50 mph          | Looking Left                  | 480 feet                          | 1,000+ feet                |
| Proposed Driveway #1 @<br>Verplank Road - Turning Left Out  | 50 mph          | Looking Left<br>Looking Right | 555 feet<br>555 feet              | 1,000+ feet<br>1,000+ feet |
| Proposed Driveway #1 @<br>Verplank Road - Turning Right Out | 50 mph          | Looking Left                  | 480 feet                          | 1,000+ feet                |

There are more than adequate sight distances looking along NYS Route 31, Morgan Road, and Verplank Road from all of the existing and proposed site driveways. There are no concerns with sight distances associated with safety for ingress and egress from the site driveways.

### 3.0 Capacity Analysis

#### Capacity Analysis Overview

Capacity analyses performed in this report are consistent with the most recent version of the Highway Capacity Manual (HCM). The software used to perform this analysis is Synchro11.

The HCM quantifies the quality of traffic flow in terms of levels of service (LOS). There are six levels of service, with LOS A indicating very low levels of delays and LOS F indicating high levels of delays associated with congestion. These represent a qualitative measure of operational conditions within a traffic stream, and the perception of conditions by motorists and/or passengers. Levels of service and capacity for signalized intersections are calculated for each lane group (a lane group may be one or more movements), each intersection approach, and the intersection as a whole. The intersection level of service is merely a weighted average of the individual approaches and may not be considered a valid measure of the quality or acceptability of an intersection design since it can conceal poor operating conditions on individual approaches.

Levels of service at unsignalized intersections are only calculated for minor movements since the through movement on the major street is not affected by intersection traffic control. The level of service for signalized intersections and unsignalized intersections can be compared.

The corresponding level of service represents the congestion of the roadway.

#### LOS for Signalized Intersection

| Control Delay (s/veh) | LOS by Volume-to-Capacity Ratio (v/c) |          |
|-----------------------|---------------------------------------|----------|
|                       | v/c ≤1.0                              | v/c >1.0 |
| ≤10                   | A                                     | F        |
| >10-20                | B                                     | F        |
| >20-35                | C                                     | F        |
| >35-55                | D                                     | F        |
| >55-80                | E                                     | F        |
| >80                   | F                                     | F        |

#### LOS for Non-Signalized Intersections

| Control Delay (s/veh) | LOS by Volume-to-Capacity Ratio (v/c) |          |
|-----------------------|---------------------------------------|----------|
|                       | v/c ≤1.0                              | v/c >1.0 |
| ≤10                   | A                                     | F        |
| >10-15                | B                                     | F        |
| >15-25                | C                                     | F        |
| >25-35                | D                                     | F        |
| >35-50                | E                                     | F        |
| >50                   | F                                     | F        |

### 3.1 Existing Volumes

AADT traffic volumes on NYS Route 31, Morgan Road, and Verplank Road (2022) were obtained from the NYSDOT Traffic Data Viewer. New traffic turning movement counts were collected at the following 21 study area intersections on Thursday May 9<sup>th</sup>/16<sup>th</sup>, 2024 during the weekday morning peak travel period, Friday May 10<sup>th</sup>/17<sup>th</sup>, 2024 during the weekday evening peak travel period and Saturday May 11<sup>th</sup>/18<sup>th</sup>, 2024 during the midday peak travel periods.

- NYS Route 31 @ Caughdenoy Road
- NYS Route 31 @ Henry Clay Boulevard
- NYS Route 31 @ Morgan Road
- NYS Route 31 @ Site Access & Dunkin'/Lazy Boy Access
- NYS Route 31 @ Site Access & Onondaga County Health Department Access
- NYS Route 31 @ Marketfair North Access
- NYS Route 31 @ NYS Route 481 NB Ramps

- NYS Route 31 @ Soule Road/NYS Route 481 SB Offramp
- NYS Route 31 @ Raymour & Flanigan Access / Dicks Access
- NYS Route 31 @ Carling Road
- NYS Route 31 @ Dell Center Drive / Willow Field Elementary Access
- NYS Route 31 @ Lowes Access / Home Depot Access
- NYS Route 31 @ Davidson Ford Access
- NYS Route 31 @ Oswego Road
- Verplank Road @ Caughdenoy Road
- Verplank Road @ Henry Clay Road
- Verplank Road @ Morgan Road
- Verplank Road @ Oswego Road
- Soule Road @ I-481 SB Onramp
- Soule Road @ Oswego Road
- Morgan Road @ Existing Site Access

The traffic counts were collected during the weekday morning (7-9am), weekday evening (4-6pm), and Saturday midday (11am-1pm) peak travel periods to ensure that actual peak hours of the adjacent streets were captured. The traffic counts included separate heavy vehicle counts per direction and pedestrians. There was minor pedestrian activity during all of the traffic count periods. Based on the traffic counts collected, the peak hours were as follows:

- Morning peak hour - 7:15-8:15am
- Evening peak hour - 4:30-5:30pm
- Saturday peak hour – 12:00-1:00pm

The 2024 existing traffic volumes collected in May were compared to average historical counts taken from the NYSDOT Traffic Data Viewer Website. Specifically, the traffic volumes were compared to the following three NYSDOT counts:

- NYS Route 31 – East of the Great Northern Mall Driveways – October 25<sup>th</sup> & 26<sup>th</sup>, 2023
- Morgan Road – Between Morgan /Road and Verplank Road – August 16<sup>th</sup>, 17<sup>th</sup> & 18<sup>th</sup>, 2022
- Verplank Road – Between Gaskin Road to Morgan Road – July 14<sup>th</sup> & 15<sup>th</sup>, 2020

The comparison of the 2023 morning and evening peak hour volumes on NYS Route 31 to the historical 2023 count showed that the 2024 counts were 6% higher eastbound/7% higher westbound during the morning peak hour and 3% higher eastbound/3% higher westbound during the evening peak hour.

The comparison of the 2024 morning and evening peak hour volumes on Morgan Road to the historical 2022 count showed that the 2024 counts were 26% higher northbound/12% higher southbound during the morning peak hour and 6% higher northbound/1% higher southbound during the evening peak hour.

The comparison of the 2024 morning and evening peak hour volumes on Verplank Road to the historical 2020 count showed that the 2024 counts were 51% higher eastbound/34% higher westbound during the morning peak hour and 2% lower eastbound/4% higher westbound during the evening peak hour.

Given the 2024 traffic counts are all consistent with or higher than historical traffic volumes passing the site, there were no seasonal adjustments applied to the existing traffic volumes.

AADT traffic volumes on NYS Route 31, Morgan Road, and Verplank Road passing the site based on the Traffic Data Viewer and a 0.5% annual growth rate are shown in the table below.

| <b>Existing Traffic Volumes for Study Area (No Build)</b> |                            |            |                       |            |                          |            |                          |            |
|-----------------------------------------------------------|----------------------------|------------|-----------------------|------------|--------------------------|------------|--------------------------|------------|
| <b>STREET NAME</b>                                        | <b>EXISTING<br/>(2024)</b> |            | <b>ETC<br/>(2034)</b> |            | <b>ETC+20<br/>(2054)</b> |            | <b>ETC+30<br/>(2064)</b> |            |
|                                                           | <i>AADT</i>                | <i>DHV</i> | <i>AADT</i>           | <i>DHV</i> | <i>AADT</i>              | <i>DHV</i> | <i>AADT</i>              | <i>DHV</i> |
| <i>NYS Route 31 passing site</i>                          | 19,159                     | 1,979      | 20,107                | 2,077      | 22,004                   | 2,272      | 22,952                   | 2,370      |
| <i>Morgan Road passing site</i>                           | 7,812                      | 849        | 8,199                 | 891        | 8,973                    | 976        | 9,359                    | 1,018      |
| <i>Verplank Road passing site</i>                         | 1,428                      | 171        | 1,499                 | 180        | 1,640                    | 197        | 1,711                    | 205        |

NYS Route 31 carries approximately 600 vehicles eastbound/650 vehicles westbound passing the site during the morning peak hour, 1,050 vehicles eastbound/1,000 vehicles westbound passing the site during the evening peak hour, and 950 vehicles eastbound/1,000 vehicles westbound passing the site during the Saturday peak hour. Morgan Road carries approximately 130 vehicles northbound/420 vehicles southbound passing the site during the morning peak hour, 520 vehicles northbound/275 vehicles southbound passing the site during the evening peak hour, and 340 vehicles northbound/330 vehicles southbound passing the site during the Saturday peak hour. Verplank Road carries approximately 55 vehicles eastbound/55 vehicles westbound passing the site during the morning peak hour, 70 vehicles eastbound/100 vehicles westbound passing the site during the evening peak hour, and 70 vehicles eastbound/45 vehicles westbound passing the site during the Saturday peak hour.

The 2022 existing traffic volumes are shown in Figures 1-9 for the weekday morning, weekday evening, and Saturday peak hours respectively.

### 3.2 Growth and Approved Development Projections

The proposed development is assumed to be completed by 2034, therefore 2034 was used as the design year for this study. In order to fully understand the impacts of the development on the adjacent roadway system, analysis of the operations immediately before the project completion must first be reviewed.

As requested by NYSDOT, growth projections in the area were developed to mimic growth assumed in the Micron studies currently being completed. The Syracuse Metropolitan Council (SMTC) provided regional modeling link volumes for the study area for the following scenarios during the weekday morning and evening peak hours:

- 2020 Existing Traffic Volumes
- 2040 Future Base Conditions – With Micron and Future Interchange Improvements in Cicero
- 2040 Select Link Analysis - Micron Trips Generated
- 2040 Future Conditions – With Micron and Great Northern Mall Redevelopment
- 2040 Select Link Analysis – Great Northern Mall Redevelopment Trips Generated
- 2040 Future Conditions – With Micron/Great Northern Mall, With Verplank Interchange

Based on a review of the various model results, it was determined that the background growth on study area roadways generally ranged between 4%-9% over the 20 year projections. Therefore a positive value of +0.5% per year was chosen to grow the 2024 existing traffic volumes to the 2034 design year to maintain a conservative analysis of traffic operations in the area. The 2034 base traffic volumes with 10% total growth in traffic are shown in Figures 10-18 for the weekday morning, weekday evening, and Saturday midday peak hours.

In addition to unknown growth, specific approved trips are also included in the background traffic volume projections. The Town of Clay Planning Department was contacted and indicated that trips associated with a future 300 unit apartment development behind Kohls, the Clay Marketplace

development, the Delta Sonic development, and Micron development needed to be included in the projections.

Trips generated by the 300 unit apartment development were estimated using the ITE Trip Generation, 11<sup>th</sup> Edition, using Land Use 221 – Mid Rise Apartments. Traffic was assumed to 50% use the Home Depot access to NYS Route 31 and 50% use the Dell Center Drive access to NYS Route 31, and was then distributed through the study based on existing traffic patterns during each peak hour. The trips generated by the apartment development are shown in Figures 19-27 for the weekday morning, weekday evening, and Saturday midday peak hours.

Trips generated by the Clay Marketplace development were taken from the February 10<sup>th</sup>, 2021 traffic study completed by GTS Consulting and distributed through the study area based on existing traffic patterns during each peak hour. The trips generated by the Clay Marketplace development are shown in Figures 28-36 for the weekday morning, weekday evening, and Saturday midday peak hours.

Trips generated by the Delta Sonic development were taken from the August 17<sup>th</sup>, 2022 traffic study completed by SRF Associates and distributed through the study area based on existing traffic patterns during each peak hour. The trips generated by the Delta Sonic development are shown in Figures 37-45 for the weekday morning, weekday evening, and Saturday midday peak hours.

Trips generated by the Micron development during each peak hour were estimated using the SMTC 2040 select link volumes as well as data provided by Micron's consultants. Based on trip generation data provided by the consultants, the total employment headcount at Micron is estimated to be 9,768 people in 2034 and 9,774 people in 2040. Since the total employment is nearly identical between 2034 and 2040, the SMTC select link volumes for the weekday morning and weekday evening peak hour were used to distribute trips through the study area. While there was no specific data available for weekend operations, Micron personnel indicated that the Saturday operation would be similar to a typical weekday. Looking at hourly employment projections entering and exiting the Micron development, there are approximately 6,028 people entering/16 exiting during the morning peak hour, 16 people entering/6,028 people exiting during the evening peak hour, and 459 people entering/459 people exiting during the midday peak hour (12pm-1pm). Therefore 7.6% of the morning entering volumes and 7.6% of the evening exiting volumes were assumed during the Saturday midday peak hour. The trips generated by the Micron development are shown in Figures 46-54 for the weekday morning, weekday evening, and Saturday midday peak hours.

The trips generated by the apartments, the Clay Marketplace development, the Delta Sonic development, and Micron development were added to the 2034 base traffic volumes for the resultant 2034 background traffic volumes as shown in Figures 55-63.

### 3.3 Projected Trip Generation & Distribution

The proposed development includes:

- General Retail – 523,360 SF
- Medical Office – 605,850 SF
- Ambulatory Care Facility – 150,000 SF
- Restaurants – 20,770 SF
- Grocery Store – 12,011 SF
- Community Center – 30,000 SF
- Apartments – 1,436 Units
- Hotels – 875 Rooms
- Senior Assisted Living – 200 Units
- Recreation / Entertainment – 67,890 SF

Trips generated by the proposed development were estimated using the ITE Trip Generation, 11<sup>th</sup> Edition, which is the industry accepted standard for estimating traffic generated by new developments. The following land uses were used in the estimate:

- Land Use 820 – Shopping Center (>150K) – Used for general retail
- Land Use 720 – Medical-Dental Office Building – Used for medical office
- Land Use 630 – Clinic – Used for Ambulatory Care Facility
- Land Use 932 – High-Turnover (Sit-Down) Restaurant – Used for restaurants
- Land Use 850 – Supermarket – used for supermarket
- Land Use 495 – Recreational Community Center – Used for Community Center
- Land Use 221 - Multifamily Housing (Mid-Rise) – Used for apartments
- Land Use 310 – Hotel – used for hotels
- Land Use 254 – Assisted Living – Used for senior assisted living

Trips generated by the recreation/entertainment space was estimate using historical data for 3 Top Golf sites as well as distribution data for ITE Land Use 432 – Golf Driving Range.

A portion of the trips generated will be internal trips, such as residents visiting the retail areas or entertainment venues, or employees dining at on-site food establishments. These multi-use trips will not create additional trips on the adjacent roadways. There will also be transit users that either live, work or shop on the site. A 15% credit was applied to the total trip generation estimate to account for potential internal capture trips (multi-use) and a 5% credit was applied to account for potential transit trips.

A significant portion of the commercial traffic generated by the retail, restaurant, and supermarket uses will be drawn from traffic already passing the site and is referred to as pass-by trips. Pass-by trips are vehicles that are already traveling through the study area but will now stop at the development on their way to another destination, such as stopping on their way to or from work. Based on data from the ITE Trip Generation, the average pass-by trip percentage for Land Use 820 is 19% during the evening peak hour and for Land Use 821 is 31% during the Saturday peak hour. The average pass-by rate for a supermarket is 24% during the evening peak hour and 19% during the Saturday peak hour. The average pass-by rate for high-turnover restaurants is 43% during the evening peak hour. A 10% pass-by credit for the commercial uses was assumed during the morning peak hour, a 20% pass-by rate was assumed during the evening peak hour, and a 25% pass-by rate was assumed during the Saturday peak hour. The pass-by credits were applied after the multi-use/transit credits to avoid compounding credits. All trips associated with the medical office, ambulatory care, community center, apartments, and hotels were assumed to be new trips.

The following table summarizes the trip generation estimate for the proposed Great Northern Mall redevelopment in the Town of Clay, NY

| <b>Trip Generation Summary</b>          |                     |                |                     |                |                      |                |
|-----------------------------------------|---------------------|----------------|---------------------|----------------|----------------------|----------------|
|                                         | <b>Morning Peak</b> |                | <b>Evening Peak</b> |                | <b>Saturday Peak</b> |                |
|                                         | <b>Entering</b>     | <b>Exiting</b> | <b>Entering</b>     | <b>Exiting</b> | <b>Entering</b>      | <b>Exiting</b> |
| Retail – 523,360 SF                     | 273                 | 167            | 854                 | 925            | 1198                 | 1105           |
| Medical Office – 605,850 SF             | 1484                | 394            | 714                 | 1667           | 1043                 | 787            |
| Ambulatory Care – 150,000 SF            | 335                 | 78             | 166                 | 388            | 243                  | 183            |
| Restaurants – 20,770 SF                 | 110                 | 89             | 115                 | 73             | 118                  | 114            |
| Supermarket – 12,011 SF                 | 20                  | 14             | 54                  | 53             | 61                   | 60             |
| Community Center – 30,000 SF            | 38                  | 19             | 35                  | 40             | 17                   | 15             |
| Apartments – 1,436 SF                   | 122                 | 409            | 342                 | 218            | 286                  | 274            |
| Hotels – 875 rooms                      | 226                 | 177            | 263                 | 253            | 353                  | 277            |

Many people expect that residential land uses will generate an average of 2 trips per unit during peak hours. The trip generation rates for standard residential land uses are generally less than 1 trip per unit for a number of reasons. The primary reason is that people work different times, some may leave for work at 6:30 in the morning while others may leave at 7:30 or 8:30. Subsequently, the arrival patterns home in the evening will also be staggered over multiple hours. Some people work evenings while others may stay at home or work from home. The rates contained in the ITE Trip Generation have been verified and provide an accurate representation of what may be expected for this development during the peak hours of the adjacent streets.

The detailed trip generation estimate is attached.

Based on SMTC regional models and existing traffic patterns/access to the adjacent expressways, the following distribution of new trips is expected:

- 20% will travel to/from the south on Route 481
- 16% will travel to/from the south on Morgan Road
- 15% will travel to/from the west on NYS Route 31
- 9% will travel to/from the east on NYS Route 31
- 8% will travel to/from the north on Morgan Road
- 6% will travel to/from the south on Soule Road
- 5% will travel to/from the north on Route 481
- 5% will travel to/from the south on Henry Clay Boulevard
- 5% will travel to/from the north on Caughdenoy Road
- 4% will travel to/from the north on Oswego Road
- 3% will travel to/from the north on Henry Clay Boulevard
- 2% will travel to/from the south on Oswego Road
- 2% will travel to/from the northwest via the Home Depot and Dell Center driveways
- 1% will travel to/from the south on Caughdenoy Road

Separate pass-by trip distributions were developed for each peak hour based on existing traffic patterns passing the site on NYS Route 31 and Morgan Road. The anticipated arrival/departure distributions are shown in Figures 64-72 for the weekday morning, weekday evening, and Saturday midday peak hours. The trips generated during each peak hour are shown in Figures 73-81, and the resultant full build traffic volumes expected when the development is complete are shown in Figures 82-90.

Based on the regional modeling completed by SMTC with and without the proposed interchange at Verplank Road, the 2034 build traffic volumes were redistributed with the potential interchange. The redistributed build traffic volumes with the Verplank Road interchange are shown in Figures 91-99.

### 3.4 Internal Circulation, Parking, Deliveries

Traffic will circulate throughout the development via the existing mall ring road and internal roadways connecting the various parking lots. There is no on-street parking planned within the development and there is no parking allowed on the adjacent streets in the study area.

### 3.5 Traffic Control Device Data

All of the study area intersections along NYS Route 31 are signalized, as well as the intersections of Oswego Road with Soule Road and Soule Road with the Route 481 southbound onramp.

The three Route 31 intersections with Caughdenoy Road (#3226), Henry Clay Boulevard (#3121), and Morgan Road (#3034) are all controlled by fully actuated, uncoordinated signals under NYSDOT jurisdiction.

The nine Route 31 intersections with the Great Northern Mall/Lazy Boy (#3238), Great Northern Mall/OC Health (#3237), Marketfair Plaza (#3252), Route 481 NB Ramps (#3236), Route 481 SB Ramp/Soule Road (#3235), Wegmans/Raymour & Flanigan (#3269), Carling Road (#3249), Dell Center Drive/Willowbrook Elementary (#3262), and Home Depot/Lowes(#3289) are all controlled by fully actuated coordinated traffic signals under NYSDOT jurisdiction.

The Route 31/Davidson driveway intersection (#3313) is controlled by a fully actuated uncoordinated traffic signal under NYSDOT jurisdiction.

The Route 31/Oswego Road intersection (#3032) is controlled by a fully actuated traffic signal which is coordinated with signals to the west under the jurisdiction of NYSDOT.

The Oswego Road/Soule Road intersection is controlled by a fully actuated uncoordinated traffic signal under the jurisdiction of Onondaga County.

The Soule Road/Route 481 Southbound Onramp intersection is controlled by a fully actuated uncoordinated signal under NYSDOT jurisdiction.

### 3.6 Capacity Analysis for Existing No-Build Condition

Capacity analysis of the existing traffic operations was completed using Synchro11.

The results of the capacity analysis indicate that all of the signalized intersections in the study area are operating at acceptable overall Levels of Service D or better during the morning, evening and Saturday peak hours with the exception of the NYS Route 31/Oswego Road intersection during the evening and Saturday peak hours (LOS E). All individual movements are operating at acceptable Level of Service D or better during the three peak hours with the following exceptions:

#### NYS Route 31 @ Henry Clay Boulevard

- NB Left/Through/Right – LOS E – morning peak (57 sec), LOS F – evening peak (81 sec)

#### NYS Route 31 @ Morgan Road

- WB Left – LOS E – evening peak (59 sec), LOS E – Saturday peak (58 sec)
- SB Through/Right – morning peak – LOS F (91 sec)

#### NYS Route 31 @ Marketfair North Plaza

- NB Left – LOS E – evening peak (59 sec)

#### NYS Route 31 @ Route 481 NB Ramps

- NB Left – LOS E – evening peak (66 sec)
- NB Through/Right – LOS E – evening peak (66 sec)

## NYS Route 31 @ Route 481 SB Ramps

- NB Left – LOS E – evening peak (56 sec)

## NYS Route 31 @ Wegmans/Raymour &amp; Flanigan

- EB Left – LOS E – Saturday peak (56 sec)
- WB Left – LOS E – evening peak (64 sec), LOS E – Saturday peak (63 sec)
- NB Left – LOS E – Saturday peak (59 sec)

## NYS Route 31 @ Carling Road

- EB Left – LOS E – evening peak (66 sec), LOS E – Saturday peak (63 sec)
- WB Left – LOS E – evening peak (67 sec), LOS E – Saturday peak (66 sec)
- NB Left – LOS E – evening peak (62 sec), LOS E – Saturday peak (59 sec)
- SB Left – LOS E – evening peak (58 sec), LOS E – Saturday peak (57 sec)

## NYS Route 31 @ Dell Center Drive/Willowfield Elementary Road

- EB Left – LOS E – evening peak (67 sec), LOS E – Saturday peak (73 sec)
- NB Left – LOS E – Saturday peak (63 sec)
- SB Left – LOS E – evening peak (58 sec)

## NYS Route 31 @ Home Depot/Lowes

- EB Left – LOS E – morning peak – (75 sec), LOS F – evening peak (81 sec),  
LOS F – Saturday peak (81 sec)
- WB Left – LOS E – morning peak – (67 sec), LOS F – evening peak (91 sec),  
LOS F – Saturday peak (131 sec)
- NB Left – LOS F – morning peak – (86 sec), LOS F – evening peak (103 sec),  
LOS F – Saturday peak (107 sec)
- NB Through – LOS E – Saturday peak (55 sec)
- SB Left – LOS E – evening peak (72 sec), LOS E – Saturday peak (75 sec)
- SB Left/Through – LOS E – evening peak (72 sec), LOS E – Saturday peak (74 sec)

## NYS Route 31 @ Oswego Road

- Overall Intersection – LOS E – evening peak (63 sec), LOS E – Saturday peak (66 sec)
- EB Left – LOS E – evening peak (61 sec)
- EB Through/Right – LOS F – evening peak (107 sec), LOS F – Saturday peak (102 sec)
- WB Left – LOS E – evening peak (71 sec), LOS F – Saturday peak (124 sec)
- SB Left – LOS E – morning peak (69 sec), LOS F – Saturday peak (92 sec)

## Soule Road @ Oswego Road

- EB Left – LOS E – evening peak (56 sec)
- NB Left – LOS E – evening peak (56 sec)
- SB Left – LOS E – evening peak (58 sec)

All unsignalized traffic movements in the study area are all operating at acceptable Levels of Service D or better during the three peak hours.

The detailed Level of Service & queue summary, and capacity analysis printouts, have been attached.

### 3.7 Capacity Analysis for Background No-Build Condition

Capacity analysis of the background traffic operations was completed using Synchro11.

Both NYSDOT and OCDOT confirmed that there are no planned highway improvements in the study area over the next ten years.

The following intersection/roadway improvements were included in the analysis associated with the approved background developments in the area:

#### Clay Market Place

- Added 250 foot northbound left turn lane and 150 southbound left turn lane on Henry Clay at NYS Route 31.
- Added protect/permitted north/south left turn phasing

#### Delta Sonic

- Added 200 foot eastbound left turn lane and 200 westbound left turn lane on NYS Route 31 at site access.
- Added traffic signal with signal coordination at site access/Texas Roadhouse driveway
- Added Home Depot/Lowes intersection to coordinated signal system.

#### Micron

- Widened NYS Route 31 to 5 lanes from Morgan Road through Caughdenoy Road
- Added 200 foot eastbound left turn lane and 200 foot westbound left turn lane at NYS Route 31/Caughdenoy Road.
- Added 200 foot eastbound right turn lane and 200 foot northbound right turn lane at NYS Route 31/Henry Clay Boulevard.

The results of the analysis show notable increases in delay throughout the study area primarily associated with the additional traffic from the Micron development. The following movements are noted to be operate at Levels of Service E or F under the background condition:

#### NYS Route 31 @ Henry Clay Boulevard

- NB Left/Through/Right – LOS E – morning peak (57 sec), LOS F – evening peak (81 sec)

#### NYS Route 31 @ Morgan Road

- Overall Intersection – LOS E – morning peak (64 sec), LOS F – evening peak (108 sec)
- EB Left – LOS F – morning peak (149 sec)
- EB Through – LOS E – morning peak (63 sec), LOS E – Saturday peak (58 sec)
- WB Left – LOS F – morning peak (103 sec), LOS F – evening peak (292 sec)  
LOS E Saturday peak (58 sec)
- NB Left – LOS F – morning peak (120 sec), LOS F – evening peak (194 sec)
- NB Right – LOS E – morning peak (58 sec)
- SB Through/Right – morning peak – LOS F (127 sec), evening peak – LOS F (200 sec)

#### NYS Route 31 @ Marketfair North Plaza

- WB Through – LOS E – evening peak (65 sec)
- NB Left – LOS E – evening peak (59 sec)

#### NYS Route 31 @ Route 481 NB Ramps

- EB Left – LOS E – evening peak (68 sec)
- WB Through – LOS F – evening peak (103 sec)
- NB Left – LOS E – Saturday peak (66 sec)
- NB Through/Right – LOS E – Saturday peak (66 sec)

#### NYS Route 31 @ Route 481 SB Ramps

- NB Left – LOS E – evening peak (70 sec)

#### NYS Route 31 @ Wegmans/Raymour & Flanigan

- EB Left – LOS E – evening peak (56 sec)
- WB Left – LOS E – evening peak (61 sec), LOS E – Saturday peak (62 sec)
- NB Left – LOS E – evening peak (59 sec), LOS E – Saturday peak (59 sec)

## NYS Route 31 @ Carling Road

- EB Left – LOS E – evening peak (60 sec), LOS E – Saturday peak (66 sec)
- WB Left – LOS E – evening peak (60 sec), LOS E – Saturday peak (63 sec)
- NB Left – LOS E – evening peak (63 sec), LOS E – Saturday peak (60 sec)
- SB Left – LOS E – evening peak (59 sec), LOS E – Saturday peak (58 sec)

## NYS Route 31 @ Dell Center Drive/Willowfield Elementary Road

- EB Left – LOS E – evening peak (63 sec), LOS E – Saturday peak (62 sec)
- NB Left – LOS E – Saturday peak (63 sec)
- SB Left – LOS E – evening peak (56 sec)

## NYS Route 31 @ Home Depot/Lowes

- EB Left – LOS E – evening peak (67 sec)
- WB Left – LOS E – evening peak (56 sec),
- NB Left – LOS E – evening peak (73 sec), LOS E – Saturday peak (79 sec)
- SB Left – LOS E – Saturday peak (59 sec)
- SB Left/Through – LOS E – Saturday peak (59 sec)

## NYS Route 31 @ Oswego Road

- Overall Intersection – LOS E – Saturday peak (63 sec)
- EB Through/Right – LOS E – Saturday peak (66 sec)
- WB Left – LOS F – Saturday peak (96 sec)
- NB Right – LOS E – evening peak (72 sec), LOS F – Saturday peak (111 sec)
- SB Left – LOS F – Saturday peak (115 sec)

## Verplank Road @ Caughdenoy Road

- EB Left/Right – LOS F – evening peak (213 sec)

## Verplank Road @ Morgan Road

- EB Left/Through/Right – LOS F – morning peak (68 sec), LOS F – evening peak (err)
- WB Left/Through/Right – LOS F – morning peak (60 sec), LOS F – evening peak (err),  
LOS E – Saturday peak (43)

## Soule Road @ Oswego Road

- EB Left – LOS E – evening peak (59 sec)
- NB Left – LOS E – evening peak (60 sec)
- SB Left – LOS E – evening peak (61 sec)

The detailed Level of Service & queue summary, and capacity analysis printouts, have been attached.

### 3.8 Capacity Analysis for Proposed Build Condition

Capacity analysis of the build traffic operations without and the Verplank Road interchange were completed with no improvements, other than the restriping NYS Route 31 and Morgan Road to include 150 left turn lanes at the proposed site driveways.

The following drops in Level of Service from the background conditions without the Verplank interchange and *with the Verplank interchange* are noted:

#### Build Conditions without/with Verplank Road Interchange

## NYS Route 31 @ Caughdenoy Road

- EB Left – LOS D to F/LOS D to F – evening peak (+315 sec/+317 sec)
- NB Left/Through/Right – LOS D to E/LOS D to E – morning peak (+18 sec/+13 sec),  
LOS D to E/LOS D to E – evening peak (+32 sec/+27 sec)

## NYS Route 31 @ Henry Clay Boulevard

- Overall Intersection – LOS D to E – morning peak (+19 sec)  
LOS D to E/LOS D to E – evening peak (+35 sec/+21 sec)
- EB Through/Right – LOS D to F/LOS D to E – morning peak (+32/+12sec)
- WB Left – LOS C to E/LOS C to E – evening peak (+31 sec/+31 sec)
- WB Through/Right – LOS D to F/LOS D to E – evening peak (+51 sec/+20 sec)
- NB Left – LOS D to F/LOS D to F – morning peak (+71 sec/+71 sec),  
LOS D to F/LOS D to F – evening peak (+88 sec/+88 sec)

## NYS Route 31 @ Morgan Road

- Overall Intersection – LOS E to F/LOS E to F – morning peak (+48 sec/+41 sec)  
LOS F to F/LOS F to F – evening peak (+149 sec/+141 sec)  
LOS D to F/LOS D to F – Saturday peak (+105 sec/+105 sec)
- EB Left – LOS D to E/LOS D to E – Saturday peak (+1 sec/+1 sec)
- EB Through – LOS E to F – morning peak (+36 sec)

NYS Route 31 @ Proposed Mall Access

- SB Left/Right – LOS F/LOS F – evening peak (2506 sec/1928 sec)  
LOS F/LOS F – Saturday peak (536 sec/536 sec)

Verplank Road @ Route 481 NB Ramps

- SB Left/Right – LOS F – Saturday peak (65 sec)

The detailed Level of Service & queue summary, and capacity analysis printouts, have been attached.

### 3.9 Mitigation Measures

The identified capacity deficiencies in the study area under the build conditions are notably the result of the combination of the projected Micron traffic and the Great Northern Mall redevelopment traffic.

To the west of the Route 481 interchange on NYS Route 31, the primary deficiency is a lack of capacity for the westbound through movement during the evening peak hour. The intersection of NYS Route 31 with Oswego Road is at or over capacity under the background conditions and is significantly impacted by the additional traffic generated by the proposed development. Some level of the recommended mitigation in this area should be contributed to by both developments.

The NYS Route 31/Route 481 interchange is at or over capacity under the background condition and is significantly impacted by the additional traffic generated by the Great Northern Mall redevelopment.

To the east of the site, there are significant failing operations at the Morgan Road intersections with NYS Route 31 and Verplank Road under the background conditions associated with the Micron development which continue to worsen with the additional site generated traffic. Some level of the recommended mitigation in this area should be contributed to both developments.

The following mitigation measures have been identified in the overall study area:

- NYS Route 31 @ Route 481 Interchange
  - o Reconstruct the interchange as a diverging diamond interchange (DDI) with signalized east/west crossings at the northbound and southbound ramps and signalized control at the left and right offramp movements both northbound and southbound.
    - Provide 3 through lanes eastbound from the Raymour & Flanigan intersection through the DDI, terminating the third inside lane as the outside left turn lane into the Great Northern Mall west driveway.
      - Remove the existing eastbound right turn only lane at Marketfair North.
    - Provide 3 through lanes westbound from the Great Northern Mall east driveway through the DDI, terminating the third lane after the Delta Sonic/Texas Roadhouse signalized intersection.
      - Maintain the auxiliary westbound right turn lanes at Great North Mall West, Wegmans, Carling Road, Dell Center Drive, and Home Depot.
  - o Extend Pepperidge Way (Carling Road) to Soule Road opposite the Route 481 southbound onramp.
    - Convert Soule Road to southbound only between NYS Route 31 and the Route 481 southbound onramp.
    - Convert the existing northbound lane on Soule Road at the Route 481 southbound onramp to left turn only movements onto the roadway extension.
    - Construct a 200 foot northbound right lane on Soule Road at the Route 481 onramp with channelization and yield control.
    - Restrict the eastbound Pepperidge Way extension to right turn only movements onto Soule Road southbound.
    - Update the traffic signal at the Soule Road/Route 481 southbound onramp as necessary to accommodate the revised layout.
- NYS Route 31 @ Caughdenoy Road

- o Add protected/permitted eastbound left turn phasing.
  - o Construct a 200 foot southbound right turn lane.
- NYS Route 31 @ Henry Clay Boulevard
  - o Construct a 2<sup>nd</sup> northbound left turn lane.
- NYS Route 31 @ Morgan Road
  - o Construct second northbound and southbound through lanes through the intersection.
  - o Construct a 2<sup>nd</sup> northbound left turn lane.
  - o Construct a 250 foot southbound right turn lane.
  - o Construct a 250 foot westbound right turn lane.
- NYS Route 31 @ Proposed Access
  - o Restrict left turns exiting the site.
- NYS Route 31 @ Great Northern Mall East Access
  - o Construct a 300 westbound right turn lane.
  - o Construct a 2<sup>nd</sup> southbound left turn lane.
- NYS Route 31 @ Carling Road
  - o Construct a 250 foot northbound right turn lane.
- NYS Route 31 @ Oswego Road
  - o Construct a 250 foot eastbound right turn lane.
  - o Construct a 250 foot westbound right turn lane.
  - o Construct a 2<sup>nd</sup> northbound right turn lane.
- Verplank Road @ Caughdenoy Road
  - o Construct a 200 foot northbound left turn lane.
  - o Install a two phase traffic signal.
- Verplank Road @ Henry Clay Boulevard
  - o Install a two phase traffic signal.
- Verplank Road @ Morgan Road
  - o Construct a 200 foot northbound right turn lane.
  - o Construct a 200 foot westbound right turn lane.
  - o Install a two phase traffic signal.
- Morgan Road @ Existing Site Access
  - o Construct a 200 foot eastbound right turn lane.
  - o Install a two phase traffic signal.
- Verplank Road @ Route 481 Northbound Ramps (Verplank Interchange Alternative Only)
  - o Construct a 200 westbound right turn lane.

With the proposed modifications noted above, all traffic movements are generally projected to operate consistent with background traffic operations at both the signalized and unsignalized intersections in the study area. The Verplank interchange is a critical feature in the mitigation as it is projected to draw 400-500 vehicles away from the NYS Route 31 corridor during the peak hours.

The following provides a brief discussion on the projected impacts at each study area intersection:

NYS Route 31 @ Caughdenoy Road – Without the Verplank Road interchange, the intersection will potentially have failing levels of delay on the westbound approach during the evening peak hour. There will also be some longer delays on the northbound approach at LOS E regardless of whether the Verplank Interchange is constructed or not. Additional improvements should be considered at this location associated with the Micron development.

NYS Route 31 @ Henry Clay Boulevard – The intersection is projected to operate at an overall Level of Service D or better with all movements operating at Level of Service E or better with the proposed mitigation and the Verplank Road interchange. The proposed interchange will draw some Micron traffic away from NYS Route 31 which will reduce westbound delays during the evening peak hour.

NYS Route 31 @ Morgan Road – The intersection is projected to have multiple failing level delays during the morning and evening peak hours associated with the Micron development traffic. While the intersection will continue to have long delays during the morning and evening peak hours, the proposed mitigation will substantially offset the projected impacts from the Great Northern Mall redevelopment traffic. Additional improvements should be considered at this intersection associated with the Micron development.

NYS Route 31 @ Great North Mall East – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service during the three peak hours. Without the interchange, there are longer delays for the westbound through and eastbound left turn movements expected, particularly during the evening peak hour.

NYS Route 31 @ Great North Mall West – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service during the three peak hours. Without the interchange, there are longer delays for the westbound through and eastbound left turn movements expected, particularly during the evening and Saturday peak hours.

NYS Route 31 @ Marketfair North – The proposed mitigation along will result in acceptable Levels of Service during the three peak hours with or without the Verplank Road interchange. There may be some longer delays for the eastbound through movement during the Saturday peak hour which can likely be addressed through signal coordination adjustments as development is completed.

NYS Route 31 @ Route 481 Interchange – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service during the three peak hours.

NYS Route 31 @ Wegmans/Raymour & Flanigan – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service consistent with the background condition during the three peak hours.

NYS Route 31 @ Carling Road – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service consistent with the background condition during the three peak hours.

NYS Route 31 @ Dell Center Drive/Willowfield Elementary – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service consistent with the background condition during the three peak hours.

NYS Route 31 @ Home Depot/Lowes – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service consistent with the background condition during the three peak hours.

NYS Route 31 @ Texas Roadhouse/Delta Sonic – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service consistent with the background condition during the three peak hours.

NYS Route 31 @ Oswego Road – The proposed mitigation along with the proposed Verplank Road interchange will result in acceptable Levels of Service consistent with the background condition during the three peak hours. Without the Verplank Road interchange, there may be longer delays on the southbound left turn movement, primarily during the evening and Saturday peak hours.

Verplank Road @ Caughdenoy Road – The proposed mitigation will result in acceptable Levels of Service with or without the proposed Verplank Road interchange. It is noted that there are failing operations at this intersection under the background condition with just the Micron development.

Verplank Road @ Henry Clay Boulevard – The proposed mitigation will result in acceptable Levels of Service with or without the proposed Verplank Road interchange.

Verplank Road @ Morgan Road – The proposed mitigation will result in acceptable Levels of Service with or without the proposed Verplank Road interchange. It is noted that there are failing operations at this intersection under the background condition with just the Micron development.

Verplank Road @ Oswego Road – There acceptable Levels of Service without mitigation at this intersection.

Soule Road @ Oswego Road – There are no notable impacts projected at this intersection.

Morgan Road @ Existing Mall Access – The proposed mitigation will result in acceptable Levels of Service with or without the proposed Verplank Road interchange.

Proposed Site Driveways – All movements are projected to operate within acceptable ranges with or without the proposed Verplank Road interchange.

Verplank Road Interchange – All movements are projected to operate within acceptable ranges during the three peak hour with the proposed mitigation. Projected traffic volumes do not warrant signalization.

The detailed Level of Service & queue summary, and capacity analysis printouts, have been attached.

## **4.0 Crash Analysis**

The purpose of this crash analysis is to identify safety problems by studying and quantifying accidents within and immediately adjacent to the driveway, and identifying abnormal patterns and clusters. An accident cluster is defined as an abnormal occurrence of similar accident types occurring at approximately the same location or involving the same geometric features. The severity of the accidents should also be considered. A history of accidents is an indication that further analysis is required to determine the cause(s) of the accident(s) and to identify what actions, if any, could be taken to mitigate the accidents.

A crash analysis was performed per Highway Design Manual Chapter 5 on NYS Route 31, Verplank Road, Oswego Road, Soule Road, Morgan Road, Henry Clay Boulevard, and Caughdenoy Road in the study area.

### **Existing Crash Data**

An accident analysis was completed for NYS Route 31, Verplank Road, Oswego Road, Soule Road, Morgan Road, Henry Clay Boulevard, and Caughdenoy Road within the study area using history reports obtained for a three year period from January 2021 through December 2023. Over the three year period, there were 688 total accidents in the study area.

Forty-Four (44) accidents occurred at the NYS Route 31/Oswego Road intersection including 37 rearend accidents, 2 right angle accidents, 2 left turn accidents, 2 sideswipe accidents and 1 fixed object accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Two (2) rearend accidents occurred at the NYS Route 31/Davidson intersection. The intersection accident rate is below the statewide average rate for similar facilities.

Thirty-Two (32) accidents occurred at the NYS Route 31/Home Depot/Lowes intersection including 25 rearend accidents, 3 right turn accidents, 2 left turn accidents, 1 right angle accident and 1 sideswipe accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Twenty-Six (26) accidents occurred at the NYS Route 31/Dell Center Drive intersection including 14 rearend accidents, 7 right angle accidents, 2 sideswipe accidents, 2 left turn accidents and 1 fixed object accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Fifty (50) accidents occurred at the NYS Route 31/Carling Road intersection including 36 rearend accidents, 3 right angle accidents, 3 right turn accidents, 5 left turn accidents, 2 sideswipe accidents, and 1 backing accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Six (6) accidents occurred at the NYS Route 31/Wegmans/Raymour & Flanigan intersection including 3 rearend accidents, 1 right angle accident, 1 sideswipe accident, and 1 backing accident. The intersection accident rate is below the statewide average rate for similar facilities.

Fifty-One (51) accidents occurred at the NYS Route 31/Route 481 Southbound Ramp/Soule Road intersection including 40 rearend accidents, 5 sideswipe accidents, 3 right angle accidents, 2 fixed object accidents and 1 left turn accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Forty-Two (42) accidents occurred at the NYS Route 31/Route 481 Northbound Ramps intersection including 28 rearend accidents, 5 left turn accidents, 4 sideswipe accidents, 3 right angle accidents, 1 backing accident, and 1 fixed object accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Fifteen (15) accidents occurred at the NYS Route 31/Marketfair Plaza intersection including 8 rearend accidents, 4 right angle accidents, 2 left turn accidents, and 1 right turn accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Seven (7) accidents occurred at the NYS Route 31/Great Northern Mall East/Lazy Boy intersection including 4 rearend accidents and 3 left turn accidents. The intersection accident rate is below the statewide average rate for similar facilities.

Forty-Three (43) accidents occurred at the NYS Route 31/Morgan Road intersection including 24 rearend accidents, 15 left turn accidents, 2 right angle accidents, 1 right turn accidents, and 1 sideswipe accident. The predominant accident types are rearend accidents which are most common at a signalized

intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Twenty-Two (22) accidents occurred at the NYS Route 31/Henry Clay Boulevard intersection including 10 rearend accidents, 5 left turn accidents, 3 sideswipe accidents, 2 right turn accidents, 1 animal related accident, and 1 fixed object accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Seventeen (17) accidents occurred at the NYS Route 31/Caughdenoy Road intersection including 8 rearend accidents, 4 left turn accidents, 3 right angle accidents, 1 right turn accident, and 1 fixed object accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Three (3) accidents occurred at the Verplank Road/Oswego Road intersection including 1 right angle accidents, 1 left turn accident, and 1 fixed object accident. The intersection accident rate is above the statewide average rate for similar facilities.

Nine (9) accidents occurred at the Verplank Road/Morgan Road intersection including 6 right angle accidents 3 rearend accidents. The intersection accident rate is above the statewide average rate for similar facilities.

One (1) right angle accident occurred at the Verplank Road/Henry Clay Boulevard intersection. The intersection accident rate is below the statewide average rate for similar facilities.

Ten (10) accidents occurred at the Soule Road/Route 481 Southbound Ramp intersection including 5 rearend accidents, 2 left turn accidents, 1 sideswipe accident, 1 fixed object accident, and 1 right turn accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Nineteen (19) accidents occurred at the Oswego Road/Soule Road intersection including 14 rearend accidents, 3 right turn accidents, 1 right angle accident, and 1 sideswipe accident. The predominant accident types are rearend accidents which are most common at a signalized intersection. The intersection accident rate is above the statewide average rate for similar facilities.

Along NYS Route 31, there were 113 total midblock accidents including 44 rearend accidents, 35 sideswipe accidents, 13 animal related accidents, 10 fixed object accidents, 4 left turn accidents, 3 non-collision accidents, 1 right angle accident, 1 right turn accident, and 1 head on accident. The link accident rate is below the statewide average rate for similar facilities.

Along Verplank Road, there were 20 total midblock accidents including 11 fixed object accidents, 5 animal related accidents, 3 sideswipe accidents, and 1 rearend accident. The link accident rate is below the statewide average rate for similar facilities.

Along Oswego Road, there were 44 total midblock accidents including 12 animal related accidents, 9 sideswipe accidents 9 left turn accidents, , 6 rearend accidents, 4 fixed object accidents, 2 right angle accidents, 1 right turn accident, and 1 head on accident. The link accident rate is below the statewide average rate for similar facilities.

Along Soule Road, there were 26 total midblock accidents including 12 rearend accidents, 4 sideswipe accidents, 5 fixed object accidents, 4 left turn accidents, and 1 animal related accident. The link accident rate is below the statewide average rate for similar facilities.

Along Morgan Road, there were 10 total midblock accidents including 5 animal related accidents, 2 backing accidents, 1 left turn accident, 1 fixed object accident, and 1 sideswipe accident. The link accident rate is below the statewide average rate for similar facilities.

Along Henry Clay Boulevard, there was 1 animal related accident. The link accident rate is below the statewide average rate for similar facilities.

Along Caughdenoy Road, there were 7 total midblock accidents including 4 animal related accidents, 2 fixed object accidents, and 1 left turn accident. The link accident rate is above the statewide average rate for similar facilities.

There were 2 accidents along Dell Center Drive, 1 accident along Carling Road, 1 accident along the Route 481 Northbound Ramp, 1 accident on McNamara Drive, 1 accident on mainline Route 481, and 62 accidents in area parking lots included in the data.

Of the accidents, 588 (85%) were non-reportable or property damage only accidents. There were 100 injury accidents with no fatalities.

#### 4.2 Compare Rates to Accepted Values

The following table provides a comparison of the existing accident rates to the statewide average rate for similar facilities:

| Intersection and Link Accident Rates |                                       |                                                |
|--------------------------------------|---------------------------------------|------------------------------------------------|
| Intersection / Link                  | Calculated Intersection Accident Rate | Statewide Accident Rate for Similar Facilities |
| NYS Route 31 @ Oswego Road           | 0.98 acc/mev                          | 0.53 acc/mev                                   |
| NYS Route 31 @ Davidson              | 0.06 acc/mev                          | 0.31 acc/mev                                   |
| NYS Route 31 @ Home Depot/Lowes      | 0.71 acc/mev                          | 0.53 acc/mev                                   |
| NYS Route 31 @ Dell Center Drive     | 0.67 acc/mev                          | 0.53 acc/mev                                   |
