

**Are you involved in cybersecurity workforce education or training (e.g., curriculum-based programs)?**

I have been involved with cybersecurity education since the past 12 years. I developed an IT Security undergraduate program at St Cloud State University in the College of Science and Engineering, and restructured the program into a Cybersecurity program last year based on NIST NICE workforce framework KSAs. I was also instrumental in creating an Information Assurance graduate program in collaboration with SCSU's School of Business. I am the PI for NSF's CyberCorps: SFS grant, and hosted two GenCyber summer camps in 2015 and 2016.
