# TEACHING AND LEARNING THE METRIC SYSTEM

This metric instructional package was designed to meet job-related metric measurement needs of students. To use this package students should already know the occupational terminology, measurement terms, and tools currently in use. These materials were prepared with the help of experienced vocational teachers, reviewed by experts, tested in classrooms in different parts of the United States, and revised before distribution.

Each of the five units of instruction contains performance objectives, learning activities, and supporting information in the form of text, exercises, and tables. In addition, suggested teaching techniques are included. At the back of this package are objective-based evaluation items, a page of answers to the exercises and tests, a list of metric materials needed for the activities, references, and a list of suppliers.

Classroom experiences with this instructional package suggest the following teaching-learning strategies:

- 1. Let the first experiences be informal to make learning the metric system fun.
- Students learn better when metric units are compared to familiar objects. Everyone should learn to "think metric." Comparing metric units to customary units can be confusing.
- Students will learn quickly to estimate and measure in metric units by "doing."
- 4. Students should have experience with measuring activities before getting too much information.
- 5. Move through the units in an order which emphasizes the simplicity of the metric system (e.g., length to area to volume).
- 6. Teach one concept at a time to avoid overwhelming students with too much material.

Unit 1 is a general introduction to the metric system of measurement which provides informal, hands-on experiences for the students. This unit enables students to become familiar with the basic metric units, their symbols, and measurement instruments; and to develop a set of mental references for metric values. The metric system of notation also is explained. Unit 2 provides the metric terms which are used in this occupation and gives experience with occupational measurement tasks.

Unit 3 focuses on job-related metric equivalents and their relationships.

Unit 4 provides experience with recognizing and using metric instruments and tools in occupational measurement tasks. It also provides experience in comparing metric and customary measurement instruments.

Unit 5 is designed to give students practice in converting customary and metric measurements. Students should learn to "think metric" and avoid comparing customary and metric units. However, skill with conversion tables will be useful during the transition to metric in each occupation.

# Using These Instructional Materials

This package was designed to help students learn a core of knowledge about the metric system which they will use on the job. The exercises facilitate experiences with measurement instruments, tools, and devices used in this occupation and job-related tasks of estimating and measuring.

This instructional package also was designed to accommodate a variety of individual teaching and learning styles. Teachers are encouraged to adapt these materials to their own classes. For example, the information sheets may be given to students for self-study. References may be used as supplemental resources. Exercises may be used in independent study, small groups, or whole-class activities. All of the materials can be expanded by the teacher.

However, the opinions expressed herein do not necessarily reflect the position or policy of the U.S. Office of Education and no official endorsement by the U.S. Office of Education should be inferred.

# UNIT -

# SUGGESTED TEACHING SEQUENCE

- These introductory exercises may require two or three teaching periods for all five areas of measurement.
- Exercises should be followed in the order given to best show the relationship between length, area, and volume.
- Assemble the metric measuring devices (rules, tapes, scales, thermometers, and measuring containers) and objects to be measured.\*
- Set up the equipment at work stations for use by the whole class or as individualized resource activities.
- 5. Have the students estimate, measure, and record using Exercises 1 through 5.
- Present information on notation and make Table 1 available.
- Follow up with group discussion of activities.

\*Other school departments may have devices which can be used. Metric suppliers are listed in the reference section.

# OBJECTIVES

The student will demonstrate these skills for the Linear, Area, Volume or Capacity, Mass, and Temperature Exercises, using the metric terms and measurement devices listed here.

		EXERCISES											
	SKILLS	Linear (pp. 3 - 4)	Area (pp. 5 - 6)	Volume or Capacity (pp. 7 - 8)	Mass (pp. 9 · 10)	Temperature (p. 11)							
1. 2. 3.	Recognize and use the unit and its symbol for: Select, use, and read the appropriate measuring instruments for: State or show a physical reference for:	millimetre (mm) centimetre (cm) metre (m)	square centimetre (cm <sup>2</sup> ) square metre (m <sup>2</sup> )	cubic centi- metre (cm <sup>3</sup> ) cubic metre (m <sup>3</sup> ) litre (l) millilitre (ml)	gram (g) kilogram (kg)	degree Celsius (°C)							
.4.	Estimate within 25% of the actual measure	height, width, or length of objects	the area of a given surface	capacity of containers	the mass of objects in grams and kilo- grams	the temperature of the air or a liquid							
5,	Read correctly	metre stick, metric tape measure, and metric rulers		measurements on graduated volume measur- ing devices	a kilogram scale and a gram scale	A Celsius thermometer							

# RULES OF NOTATION

- 1. Symbols are not capitalized unless the unit is a proper name (mm not MM).
- 2. Symbols are not followed by periods (m not m.).
- 3. Symbols are not followed by an s for plurals (25 g not 25 gs).
- 4. A space separates the numerals from the unit symbols (4 1 not 41).
- 5. Spaces, not commas, are used to separate large numbers into groups of three digits (45 271 km not 45,271 km).
- 6. A zero precedes the decimal point if the number is less than one (0.52 g not .52 g).
- 7. Litre and metre can be spelled either with an -re or -er ending.

1

METRIC UNITS, SYMBOLS, AND REFERENTS

Quantity	Metric Unit	Symbol	Useful Referents
Length	millimetre	mm	Thickness of dime or paper clip wire
	centimetre	cm	Width of paper clip
	metre	m	Height of door about 2 m
	kilometre	km	12-minute walking distance
Area	square centimetre	cm <sup>2</sup>	Area of this space
	square metre	m <sup>2</sup>	Area of card table top
	hectare	ha	Football field including sidelines and end zones
Volume and	millilitre	ml	Teaspoon is 5 ml
Capacity	litre	1	A little more than 1 quart
	cubic centimetre	cm <sup>3</sup>	Volume of this container
	cubic metre	m <sup>3</sup>	A little more than a cubic yard
Mass	milligram	mg	Apple seed about 10 mg, grain of salt, 1 mg
	gram	g	Nickel about 5 g
	kilogram	kg	Webster's Collegiate Dictionary
	metric ton (1 000 kilograms)	t	Volkswagen Beetle

$0.000\ 001 = 10^{-6}$	micro (mi'kro)	μ

# LINEAR MEASUREMENT ACTIVITIES

Metre, Centimetre, Millimetre

# I. THE METRE (m)

- A. DEVELOP A FEELING FOR THE SIZE OF A METRE
  - Pick up one of the metre sticks and stand it up on the floor. Hold it in place with one hand. Walk around the stick. Now stand next to the stick. With your other hand, touch yourself where the top of the metre stick comes on you.

# THAT IS HOW HIGH A METRE IS!

2. Hold one arm out straight at shoulder height. Put the metre stick along this arm until the end hits the end of your fingers. Where is the other end of the metre stick? Touch yourself at that end.

THAT IS HOW LONG A METRE IS!

 Choose a partner to stand at your side. Move apart so that you can put one end of a metre stick on your partner's shoulder and the other end on your shoulder. Look at the space between you.

# THAT IS THE WIDTH OF A METRE! '

# B. DEVELOP YOUR ABILITY TO ESTIMATE IN METRES

Now you will improve your ability to estimate in metres. Remember where the length and height of a metre was on your body.

For each of the following items:

Estimate the size of the items and write your estimate in the ESTIMATE column. Measure the size with your metre stick and write the answer in the MEASUREMENT column.

Decide how close your estimate was to the actual measure. If your estimate was within 25% of the actual measure you are a "Metric Marvel."

		Estimate (m)	Measurement (m)	How Close Were You?	
1.	Height of door knob from floor.			<u>, 1997</u>	
2.	Height of door.				
3.	Length of table.				
4.	Width of table.				
5.	Length of wall of this room.				
6.	Distance from you to wall.				

Exercise 1 (continued on next page) II. THE CENTIMETRE (cm)

There are 100 centimetres in one metre. If there are 4 metres and 3 centimetres, you write 403 cm  $[(4 \times 100 \text{ cm}) + 3 \text{ cm} = 400 \text{ cm} + 3 \text{ cm}]$ .

A. DEVELOP A FEELING FOR THE SIZE OF A CENTIMETRE

- Hold the metric ruler against the width of your thumbnail. How wide is it? \_\_\_\_\_ cm
- Measure your thumb from the first joint to the end.
   \_\_\_\_\_ cm
- 3. Use the metric ruler to find the width of your palm. cm
- 4. Measure your index or pointing finger. How long is it?
- Measure your wrist with a tape measure. What is the distance around it? \_\_\_\_\_ cm
- 6. Use the tape measure to find your waist size. \_\_\_\_\_ cm

# B. DEVELOP YOUR ABILITY TO ESTIMATE IN CENTIMETRES

You are now ready to estimate in centimetres. For each of the following items, follow the procedures used for estimating in metres.

Harr Class

		Estimate (cm)	Measurement (cm)	Were You?	
1.	Length of a paper clip.				
2.	Diameter (width) of a coin.				
3.	Width of a postage stamp.		_		
4.	Length of a pencil.				
5.	Width of a sheet of paper.				
THE	CENTER FOR VOCATIONAL	EDUCATION			

III. THE MILLIMETRE (mm)

There are 10 millimetres in one centimetre. When a measurement is 2 centimetres and 5 millimetres, you write  $25 \text{ mm} [(2 \times 10 \text{ mm}) + 5 \text{ mm} = 20 \text{ mm} + 5 \text{ mm}]$ . There are 1 000 mm in 1 m.

A. DEVELOP A FEELING FOR THE SIZE OF A MILLIMETRE

Using a ruler marked in millimetres, measure:

- 1. Thickness of a paper clip wire. \_\_\_\_\_ mm
- 2. Thickness of your fingernail. \_\_\_\_\_ mm
- 3. Width of your fingernail. \_\_\_\_\_ mm
- 4. Diameter (width) of a coin. \_\_\_\_\_ mm
- 5. Diameter (thickness) of your pencil. \_\_\_\_\_ mm
- 6. Width of a postage stamp. \_\_\_\_\_ mm

# B. DEVELOP YOUR ABILITY TO ESTIMATE IN MILLIMETRES

You are now ready to estimate in millimetres. For each of the following items, follow the procedures used for estimating in metres.

		Estimate (mm)	Measurement (mm)	How Close Were You?
1.	Thickness of a nickel.			_
2.	Diameter (thickness) of a bolt.			
3.	Length of a bolt.			
4.	Width of a sheet of paper.			
5.	Thickness of a board or desk top.			
6.	Thickness of a button.			_

# AREA MEASUREMENT ACTIVITIES

# Square Centimetre, Square Metre

WHEN YOU DESCRIBE THE AREA OF SOMETHING, YOU ARE SAYING HOW MANY SQUARES OF A GIVEN SIZE IT TAKES TO COVER THE SURFACE.

- I. THE SQUARE CENTIMETRE (cm<sup>2</sup>)
  - A. DEVELOP A FEELING FOR A SQUARE CENTIMETRE
    - 1. Take a clear plastic grid, or use the grid on page 6.
    - 2. Measure the length and width of one of these small squares with a centimetre ruler.

THAT IS ONE SQUARE CENTIMETRE!

- 3. Place your fingernail over the grid. About how many squares does it take to cover your fingernail? cm<sup>2</sup>
- Place a coin over the grid. About how many squares does it take to cover the coin? \_\_\_\_\_cm<sup>2</sup>
- Place a postage stamp over the grid. About how many squares does it take to cover the postage stamp?
- 6. Place an envelope over the grid. About how many squares does it take to cover the envelope?

 $cm^2$ 

7. Measure the length and width of the envelope in centimetres. Length \_\_\_\_\_ cm; width \_\_\_\_\_ cm. Multiply to find the area in square centimetres. \_\_\_\_\_ cm x \_\_\_\_ cm = \_\_\_\_ cm<sup>2</sup>. How close are the answers you have in 6. and in 7.?

B. DEVELOP YOUR ABILITY TO ESTIMATE IN SQUARE CENTIMETRES

You are now ready to develop your ability to estimate in square centimetres.

Remember the size of a square centimetre. For each of the following items, follow the procedures used for estimating in metres.

		Estimate (cm <sup>2</sup> )	Measurement (cm <sup>2</sup> )	How Close Were You?
1.	Index card.	1		
2.	Book cover.	· · · · · · · · · · · · · · · · · · ·		
3.	Photograph.			
4.	Window pane or desk top.			

# II. THE SQUARE METRE (m<sup>2</sup>)

- A. DEVELOP A FEELING FOR A SQUARE METRE
  - 1. Tape four metre sticks together to make a square which is one metre long and one metre wide.
  - Hold the square up with one side on the floor to see how big it is.
  - 3. Place the square on the floor in a corner. Step back and look. See how much floor space it covers.
  - 4. Place the square over a table top or desk to see how much space it covers.
  - Place the square against the bottom of a door. See how much of the door it covers. How many squares would it take to cover the door? \_\_\_\_m<sup>2</sup>

THIS IS HOW BIG A SQUARE METRE IS!

В.	. DEVELOP YOUR ABILITY TO ESTIMATE IN SQUARE METRES								 	0	ĊE	NTI	ME	TRI	E GI	RID		-

THE CENTER FOR VOCATIONAL EDUCATION

Exercise 2

6

# VOLUME MEASUREMENT ACTIVITIES

# Cubic Centimetre, Litre, Millilitre, Cubic Metre

- I. THE CUBIC CENTIMETRE (cm<sup>3</sup>)
  - A. DEVELOP A FEELING FOR THE CUBIC CENTIMETRE
    - Pick up a colored plastic cube. Measure its length, height, and width in centimetres. THAT IS ONE CUBIC CENTIMETRE!
    - 2. Find the volume of a plastic litre box.
      - a. Place a ROW of cubes against the bottom of one side of the box. How many cubes fit in the row?\_\_\_\_\_
      - b. Place another ROW of cubes against an adjoining side of the box. How many rows fit inside the box to make one layer of cubes? \_\_\_\_\_

How many cubes in each row?\_\_\_\_\_

How many cubes in the layer in the bottom of the box?

c. Stand a ROW of cubes up against the side of the box. How many LAYERS would fit in the box?

How many cubes in each layer?

How many cubes fit in the box altogether?\_\_\_\_\_

THE VOLUME OF THE BOX IS \_\_\_\_\_CUBIC CENTIMETRES.

d. Measure the length, width, and height of the box in centimetres. Length \_\_\_\_\_ cm; width \_\_\_\_\_ cm; height \_\_\_\_\_ cm. Multiply these numbers to find the volume in cubic centimetres.

 $\frac{cm x}{Are the answers the same in c. and d.?} cm^{3}$ 

# B. DEVELOP YOUR ABILITY TO ESTIMATE IN CUBIC CENTIMETRES

You are now ready to develop your ability to estimate in cubic centimetres.

Remember the size of a cubic centimetre. For each of the following items, use the procedures for estimating in metres.

		Estimate (cm <sup>3</sup> )	Measurement (cm <sup>3</sup> )	How Close Were You?
1.	Index card file box.			
2.	Freezer container.			
3.	Paper clip box.			
4.	Box of staples.			

# II. THE LITRE (1)

# A. DEVELOP A FEELING FOR A LITRE

- 1. Take a one litre beaker and fill it with water.
- 2. Pour the water into paper cups, filling each as full as you usually do. How many cups do you fill?

THAT IS HOW MUCH IS IN ONE LITRE!

3. Fill the litre container with rice.

THAT IS HOW MUCH IT TAKES TO FILL A ONE LITRE CONTAINER!

(continued on next page)

# B. DEVELOP YOUR ABILITY TO ESTIMATE IN LITRES

You are now ready to develop your ability to estimate in litres. To write two and one-half litres, you write 2.5 l, or 2.5 litres. To write one-half litre, you write 0.5 l, or 0.5 litre. To write two and three-fourths litres, you write 2.75 l, or 2.75 litres.

For each of the following items, use the procedures for estimating in metres.

, a		Estimate (1)	Measurement (1)	Were You?
1.	Medium-size			-
	freezer container.			
2.	Large freezer			
	container.			
3.	Small freezer			
	container.		-	
4.	Bottle or jug.			

Uaw Class

#### III. THE MILLILITRE (ml)

There are 1 000 millilitres in one litre.  $1\ 000\ ml = 1$  litre. Half a litre is 500 millilitres, or 0.5 litre = 500 ml.

#### A. DEVELOP A FEELING FOR A MILLILITRE

- Examine a centimetre cube. Anything which holds 1 cm<sup>3</sup> holds 1 ml.
- Fill a 1 millilitre measuring spoon with rice. Empty the spoon into your hand. Carefully pour the rice into a small pile on a sheet of paper.

THAT IS HOW MUCH ONE MILLILITRE IS!

3. Fill the 5 ml spoon with rice. Pour the rice into another pile on the sheet of paper.

THAT IS 5 MILLILITRES, OR ONE TEASPOON!

4. Fill the 15 ml spoon with rice. Pour the rice into a third pile on the paper.

#### THAT IS 15 MILLILITRES, OR ONE TABLESPOON!

THE CENTER FOR VOCATIONAL EDUCATION

### B. DEVELOP YOUR ABILITY TO ESTIMATE IN MILLILITRES

You are now ready to estimate in millilitres. Follow the procedures used for estimating metres.

		Estimate (ml)	Measurement (ml)	How Close Were You?
1.	Small juice can.	-		
2.	Paper cup or tea cup.			272
3.	Soft drink can.			
4.	Bottle.	· · · · · · · · · · · · · · · · · · ·		

### IV. THE CUBIC METRE (m<sup>3</sup>)

1.

2.

3.

#### A. DEVELOP A FEELING FOR A CUBIC METRE

- 1. Place a one metre square on the floor next to the wall
- 2. Measure a metre UP the wall.
- Picture a box that would fit into that space.
   THAT IS THE VOLUME OF ONE CUBIC METRE!

#### B. DEVELOP YOUR ABILITY TO ESTIMATE IN CUBIC METRES

For each of the following items, follow the estimating procedures used before.

	Estimate (m <sup>3</sup> )	Measurement (m <sup>3</sup> )	Were You?
Office desk.	· · · · · ·		
File cabinet.			
Small room.			

# MASS (WEIGHT) MEASUREMENT ACTIVITIES Kilogram, Gram

The mass of an object is a measure of the amount of matter in the object. This amount is always the same unless you add or subtract some matter from the object. Weight is the term that most people use when they mean mass. The weight of an object is affected by gravity; the mass of an object is not. For example, the weight of a person on earth might be 120 pounds; that same person's weight on the moon would be 20 pounds. This difference is because the pull of gravity on the moon is less than the pull of gravity on earth. A person's mass on the earth and on the moon would be the same. The metric system does not measure weight--it measures mass. We will use the term mass here.

The symbol for gram is g.

The symbol for kilogram is kg.

There are 1 000 grams in one kilogram, or 1 000 g = 1 kg.

Half a kilogram can be written as 500 g,or 0.5 kg.

A quarter of a kilogram can be written as 250 g,or 0.25 kg. Two and three-fourths kilograms is written as 2.75 kg.

# I. THE KILOGRAM (kg)

DEVELOP A FEELING FOR THE MASS OF A KILOGRAM

Using a balance or scale, find the mass of the items on the table. Before you find the mass, notice how heavy the object "feels" and compare it to the reading on the scale or balance. Mass (kg)
1. 1 kilogram box. \_\_\_\_\_
2. Textbook. \_\_\_\_\_
3. Bag of sugar. \_\_\_\_\_
4. Package of paper. \_\_\_\_\_
5. Your own mass. \_\_\_\_\_

## B. DEVELOP YOUR ABILITY TO ESTIMATE IN KILOGRAMS

For the following items ESTIMATE the mass of the object in kilograms, then use the scale or balance to find the exact mass of the object. Write the exact mass in the MEASUREMENT column. Determine how close your estimate is:

		Estimate (kg)	Measurement (kg)	How Close Were You?
1.	Bag of rice.			
2.	Bag of nails.			
3.	Large purse or briefcase.			
4.	Another person.	-		
5.	A few books.			

# II. THE GRAM (g)

- A. DEVELOP A FEELING FOR A GRAM
  - 1. Take a colored plastic cube. Hold it in your hand. Shake the cube in your palm as if shaking dice. Feel the pressure on your hand when the cube is in motion, then when it is not in motion.

THAT IS HOW HEAVY A GRAM IS!

2. Take a second cube and attach it to the first. Shake the cubes in first one hand and then the other hand; rest the cubes near the tips of your fingers, moving your hand up and down.

THAT IS THE MASS OF TWO GRAMS!

 Take five cubes in one hand and shake them around. THAT IS THE MASS OF FIVE GRAMS!

# B. DEVELOP YOUR ABILITY TO ESTIMATE IN GRAMS

You are now ready to improve your ability to estimate in grams. Remember how heavy the 1 gram cube is, how heavy the two gram cubes are, and how heavy the five gram cubes are. For each of the following items, follow the procedures used for estimating in kilograms.

		Estimate (g)	Measurement (g)	How Close Were You?
1.	Two thumbtacks.			
2.	Pencil.			à
3.	Two-page letter and envelope.			
4.	Nickel.			
5.	Apple.	1		
6.	Package of margarine.			

THE CENTER FOR VOCATIONAL EDUCATION

# TEMPERATURE MEASUREMENT ACTIVITIES

# Degree Celsius

# I. DEGREE CELSIUS (°C)

Degree Celsius ( $^{\circ}$ C) is the metric measure for temperature.

# A. DEVELOP A FEELING FOR DEGREE CELSIUS

Take a Celsius thermometer. Look at the marks on it.

1. Find 0 degrees.

WATER FREEZES AT ZERO DEGREES CELSIUS (0°C) WATER BOILS AT 100 DEGREES CELSIUS (100°C)

- 2. Find the temperature of the room. \_\_\_\_\_°C. Is the room cool, warm, or about right?
- 3. Put some hot water from the faucet into a container. Find the temperature. <u>°C.</u> Dip your finger quickly in and out of the water. Is the water very hot, hot, or just warm?
- 4. Put some cold water in a container with a thermometer. Find the temperature. \_\_\_\_\_°C. Dip your finger into the water. Is it cool, cold, or very cold?
- Bend your arm with the inside of your elbow around the bottom of the thermometer. After about three minutes find the temperature.
   °C. Your skin temperature is not as high as your body temperature.

NORMAL BODY TEMPERATURE IS 37 DEGREES CELSIUS (37°C).

A FEVER IS 39°C.

A VERY HIGH FEVER IS 40°C.

# B. DEVELOP YOUR ABILITY TO ESTIMATE IN DEGREES CELSIUS

For each item, ESTIMATE and write down how many degrees Celsius you think it is. Then measure and write the MEASURE-MENT. See how close your estimates and actual measurements are.

		Estimate	Measurement	Were You?
		(°C)	(°C)	Here rou.
1,	Mix some hot and cold water in a container. Dip your finger into the water.			
2.	Pour out some of the water. Add some hot water. Dip your finger <u>quickly</u> into the water.			
3.	Outdoor tempera- ture.			
4.	Sunny window sill.			· · · · ·
5.	Mix of ice and water.			
6.	Temperature at floor.			
7.	Temperature at ceiling.	_	_	

# UNIT 2

# OBJECTIVES

The student will recognize and use the metric terms, units, and symbols used in this occupation.

- Given a metric unit, state its use in this occupation.
- Given a measurement task in this occupation, select the appropriate metric unit and measurement tool.

# SUGGESTED TEACHING SEQUENCE

- 1. Assemble metric measurement tools (rules, tapes, scales, thermometers, etc.) and objects related to this occupation.
- Discuss with students how to read the tools.
- 3. Present and have students discuss Information Sheet 2 and Table 2.
- Have students learn occupationallyrelated metric measurements by completing Exercises 6 and 7.
- Test performance by using Section A of "Testing Metric Abilities."

# METRICS IN THIS OCCUPATION

Changeover to the metric system is under way. Large corporations are already using metric measurement to compete in the world market. The metric system has been used in various parts of industrial and scientific communities for years. Legislation, passed in 1975, authorizes an orderly transition to use of the metric system. As businesses and industries make this metric changeover, employees will need to use metric measurement in job-related tasks.

Table 2 lists those metric terms which are most commonly used in this occupation. These terms are replacing the measurement units used currently. What kinds of jobrelated tasks use measurement? Think of the many different kinds of measurements you now make and use Table 2 to discuss the metric terms which replace them. See if you can add to the list of uses beside each metric term.

# Metric Units for Offset Press Operation

Quantity	Unit	Symbol	Üse			
Length	millimetre	mm	Plates * blankat nanor marging			
	centimetre	cm	riates," blanket, paper, margins			
Mass	gram	g	Ink, dryer, etch gun

Application rates	grams per square metre	g/m <sup>2</sup>	materials			

\*Either centimetres or millimetres may be used. A final decision has not been made by U.S. manufacturers. To obtain current information contact the National Association of Photographic Manufacturers.

\*\*Capacities of tanks, trays, and reservoirs can be given either in terms of liquid capacity (millilitres and litres) or in terms of cubic volume (cubic centimetres) of the inside space.

# TRYING OUT METRIC UNITS

To give you practice with metric units, first estimate the measurements of the items below. Write down your best guess next to the item. Then actually measure the item and write down your answers using the correct metric symbols. The more you practice, the easier it will be.

		Estimate	Actual
Length 1.	Palm width		
2.	Hand span		
3.	Your height		
4.	Lab press height		
5.	Lab press length		
6.	Lab press width	1.1.1.1	
7.	Card stock length		
8.	Card stock width	1	
9.	Paper length		
Area 10.	Press sheet size - maximum		
11.	Press sheet size - minimum		
12.	Lab press floor space		
13.	Oil span for lab press		
14.	Card stock		
Volume 15.	/Capacity Measuring graduate (metric)		

		Estimate	Actual	
16. F	Fountain etch jug			
17. P	ress solution tank			
18. P	'late finisher bottle			
19. A	Alcohol safety can			
20. F	Hand cleaner container			
21. P	artly-filled bottle			
22. Stockroom ør storage space				
Mass 23. N	Yourself			
24. <i>I</i>	A litre of water (net)			
25. (	Can of ink			
26. (	Container of alcohol			
27. I	Package of paper			
28. I	Box of paper stock			
Temperat	ture			
29. I	Room			
30. (	Dutside			
31. I	Lab press room			
32. I	Hot tap water

# PRINTING WITH METRICS

It is important to know what metric measurement to use. Show what measurement to use in the following situations. 1. Maximum printing area of lab press 2. Amount of alcohol in normal fountain solution 3. Spray powder 4. Plate to blanket pressure 5. Impression cylinder setting for 4.4 kg bond paper 6. Gripper margin of lab press 7. Initial air blast setting 8. Blanket size for lab press 9. Overpacking of blanket cylinder necessary for proper printing pressure 10. Undercut of plate cylinder on lab press 11. Plate thickness range for lab press 12. Feeder capacity of lab press 13. Delivery capacity of lab press 14. Diameter of ink dampener roller on lab press

15.	Dia	ameter of ink form rollers	
16.	We	ight of lab press	
17.	Par	per thickness	
18.	Ac	quantity of printing ink	
19.	The	e combined thickness of a nket and packing	
20.	Ma	ximum image area of a lab press	
21.	Dir	nensions of a lab press:	
	a.	Height	
	b.	Length	
	c.	Width	

THE CENTER FOR VOCATIONAL EDUCATION

# UNIT 3

# OBJECTIVE

The student will recognize and use metric equivalents.

• Given a metric unit, state an equivalent in a larger or smaller metric unit.

# SUGGESTED TEACHING SEQUENCE

- Make available the Information Sheets (3 - 8) and the associated Exercises (8 - 14), one at a time.
- 2. As soon as you have presented the Information, have the students complete each Exercise.
- Check their answers on the page titled ANSWERS TO EXERCISES AND TEST.
- 4. Test performance by using Section B of "Testing Metric Abilities."

# METRIC-METRIC EQUIVALENTS

Centimetres and Millimetres

Look at the picture of the nail next to the ruler. The nail is 57 mm long. This is 5 cm + 7 mm. There are 10 mm in each cm, so 1 mm = 0.1 cm (one-tenth of a centimetre). This means that 7 mm = 0.7 cm, so 57 mm = 5 cm + 7 mm

= 5 cm + 0.7 cm

= 5.7 cm. Therefore 57 mm is the same as 5.7 cm.

Now measure the paper clip. It is 34 mm. This is the same as  $3 \text{ cm} + \_\__mm$ . Since each millimetre is 0.1 cm (one-tenth of a centimetre),  $4 \text{ mm} = \_\__mm$ . So, the paper clip is 34 mm = 3 cm + 4 mm

= 3 cm + 0.4 cm

= 3.4 cm. This means that 34 mm is the same as 3.4 cm.

Information Sheet 3

Now you try some.

- a) 26 mm = \_\_\_\_\_ cm
- b) 583 mm = \_\_\_\_ cm
- c) 94 mm = \_\_\_\_\_ cm
- d) 680 mm = \_\_\_\_\_ cm

e) 132 mm = \_\_\_\_ cm
f) 802 mm = \_\_\_\_ cm
g) 1 400 mm = \_\_\_\_ cm
h) 2 307 mm = \_\_\_\_ cm

Metres, Centimetres, and Millimetres

There are 100 centimetres in one metre. Thus,

2 m = 2 x 100 cm = 200 cm, 3 m = 3 x 100 cm = 300 cm, 8 m = 8 x 100 cm = 800 cm,36 m = 36 x 100 cm = 3600 cm.

There are 1 000 millimetres in one metre, so

2 m = 2 x 1 000 mm = 2 000 mm, 3 m = 3 x 1 000 mm = 3 000 mm, 6 m = 6 x 1 000 mm = 6 000 mm, 24 m = 24 x 1 000 mm = 24 000 mm.

From your work with decimals you should know that

one-half of a metre can be written 0.5 m (five-tenths of a metre), one-fourth of a centimetre can be written 0.25 cm (twenty-five hundredths of a centimetre).

This means that if you want to change three-fourths of a metre to millimetres, you would multiply by 1 000. So

0.75 m = 0.75 x 1 000 mm  $= \frac{75}{100} \text{ x} 1 000 \text{ mm}$   $= 75 \text{ x} \frac{1000}{100} \text{ mm}$  = 75 x 10 mm = 750 mm. This means that 0.75 m = 750 mm.

Information Sheet 4

Exercise 9

Fill in the following chart.

metre m	centimetre cm	millimetre mm
1	100	1 000
2	200	1
3	1	
9		1
	1	5 000
74		
0.8	80	
0.6		600
	2.5	25
		148
	639	

CENTER FOR VOCATIONAL EDUCATION

# Millilitres to Litres

There are 1 000 millilitres in one litre. This means that

2 000 millilitres is the same as 2 litres, 3 000 ml is the same as 3 litres, 4 000 ml is the same as 4 litres, 12 000 ml is the same as 12 litres.

Since there are 1 000 millilitres in each litre, one way to change millilitres to litres is to divide by 1 000. For example,

> Or  $1\ 000\ ml = \frac{1\ 000}{1\ 000}\ litre = 1\ litre.$   $2\ 000\ ml = \frac{2\ 000}{1\ 000}\ litres = 2\ litres.$ And, as a final example,

$$28\ 000\ ml = \frac{28\ 000}{1\ 000}\ litres = 28\ litres.$$

What if something holds 500 ml? How many litres is this? This is worked the same way.

 $500 \text{ ml} = \frac{500}{1\ 000}$  litre = 0.5 litre (five-tenths of a litre ). So 500 ml is the same as one-half (0.5) of a litre.

Change 57 millilitres to litres.

 $57 \text{ ml} = \frac{57}{1000}$  litre = 0.057 litre (fifty-seven thousandths of a litre).

# Information Sheet 5

Now you try some. Complete the following chart.

millilitres (ml)	litres (1)
3 000	3
6 000	
100 may 100 million 1	8
14 000	
	23
300	0.3
700	
	0.9
250	
1	0.47
275	

#### 18

# Litres to Millilitres

What do you do if you need to change litres to millilitres? Remember, there are 1 000 millilitres in one litre, or 1 litre = 1 000 ml.

```
So,
```

2	litres	=	2	x	1	000	ml	=	2	000	ml,
7	litres	=	7	x	1	000	ml	=	7	000	ml.
13	litres	=1	3	x	1	000	ml	=1	3	000	ml,
0.65	litre	=	0.65	x	1	000	ml	=		650	ml.

Information Sheet 6

Now you try some. Complete the following chart.

litres 1	millilitres ml
8	8 000
5	
46	
	32 000
0.4	
0.53	
	480

Exercise 11

# Grams to Kilograms

There are 1 000 grams in one kilogram. This means that

2 000 grams is the same as 2 kilograms,

5 000 g is the same as 5 kg,

700 g is the same as 0.7 kg, and so on.

To change from grams to kilograms, you use the same procedure for changing from millilitres to litres.

Try the following ones.

grams g	kilograms kg
4 000	4
9 000	
23 000	1
	8
300	1

# Changing Units at Work

Some of the things you use in this occupation may be measured in different metric units. Practice changing each of the following to metric equivalents by completing these statements.

a ) 500 cm of paper is	
b) 250 ml of solution is	
c ) 50 cm diameter bottle is	
d ) 2 500 g of ink is	
e ) 203 mm plate is	
f ) 0.25 litre of fountain solution is	
g ) 2 000 kg press is	
h ) 0.5 litre of concentrate is	
i )2 m cut poster is	
j ) 500 g of ink is	
k ) 500 ml of gum arabic solution is	
1) 0.5 t of paper stock is	
m) 10 m roll of tape is	
n ) 2.5 cm diameter roller is	
o ) 15 cm ink knife blade is	
<ul> <li>o ) 15 cm ink knife blade is</li> </ul>	

# JNIT 4

# OBJECTIVE

The student will recognize and use instruments, tools, and devices for measurement tasks in this occupation.

- Given metric and Customary tools, instruments, or devices, differentiate between metric and Customary.
- Given a measurement task, select and use an appropriate tool, instrument or device.
- Given a metric measurement task, judge the metric quantity within 25% and measure within 5% accuracy.

# SUGGESTED TEACHING SEQUENCE

- Assemble metric and Customary measuring tools and devices (rules, scales, <sup>0</sup>C thermometer, drill bits, wrenches, micrometer, vernier calipers, feeler gages) and display in separate groups at learning stations.
- Have students examine metric tools and instruments for distinguishing characteristics and compare them with Customary tools and instruments.
- Have students verbally describe characteristics.
- Present or make available Information Sheet 9.
- 5. Mix metric and Customary tools or equipment at learning station. Give students Exercises 15 and 16.
- 6, Test performance by using Section C of "Testing Metric Abilities."

HE CENTER FOR VOCATIONAL EDUCATION

# SELECTING AND USING METRIC INSTRUMENTS , TOOLS AND DEVICES

Selecting an improper tool, misreading a scale or misinterpreting figures can result in improper forms, damaged materials, or injury to self or fellow workers. For example: The weight markings on a new German-built offset press were read as 2000 lbs. instead of 2 000 kilograms (4400 lbs). The press was placed on a 1 ton elevator. The elevator slowly sank to the basement instead of lifting the press to the third floor. Much time and money was lost. Here are some suggestions:

- 1. Find out in advance whether Customary or metric units, tools, instruments, or products are needed for a given task.
- 2. Examine the tool or instrument before using it.
- 3. The metric system is a decimal system. Look for units marked off in whole numbers, tens or tenths, hundreds or hundredths.
- 4. Look for metric symbols on the tools or gages such as m, mm, kg, g, kPa, etc.
- 5. Look for decimal fractions (0.25) or decimal mixed fractions (2.50) rather than common fractions.
- Some products may have a special metric symbol such as a block M to show they are metric.
- 7. Don't force devices which are not fitting properly.
- 8. Practice selecting and using tools, instruments, and devices.

Information Sheet 9

# WHICH TOOLS FOR THE JOB?

Practice and prepare to demonstrate your ability to *identify*, *select*, *and use* metric-scaled tools and instruments for the tasks given below. You should be able to use the measurement tools to the appropriate precision of the tool, instrument, or task.

- 1. Determine plate thickness.
- 2. Mix fountain solution.
- Calculate amount of ink needed for 10,000 sheet run of 420 mm x 594 mm stock.
- 4. Adjust vacuum for proper sheet feed.
- 5. Determine floor space needed for additional lab press.
- 6. Calculate the number of sheets of paper in feed pile.
- 7. Determine blanket to impression cylinder pressure.
- 8. Measure dryer and varnish to be added to ink.
- 9. Determine amount of packing for plate cylinder.
- 10. Order diameter change in No. 1 form roller.
- 11. Check the blanket and plate packing.
- 12. Determine capacity of a fountain solution bottle.

# MEASURING UP IN PRINTING

For the tasks below, estimate the metric measurement to within 25% of actual measurement, and verify the estimation by measuring to within 5% of actual measurement.

		Estimate	Verify
1.	Thickness of new offset blanket		
2.	Sheet of paper: a. Length		
	b. Width	=	
3.	Number of sheets of No. 20 bond paper in stack 90 cm high		
4.	Size of new offset blanket: a. Length		
	b. Width		
5.	Temperature of: a. Lab		
	b. Outisde		
	c. Paper storage area		t
6.	Volume of carton containing jugs of concentrate	-	
7.	Spacing of ink fountain setting keys		
8.	Working area needed for lab press		
9.	Mass of large can of ink		
10.	Volume of plate developer remain- ing in partially full container		
11.	Amount of dry spray to replenish drum		
12.	Height of 100 sheets of No. 110 card stock		

# OBJECTIVE.

The student will recognize and use metric and Customary units interchangeably in ordering, selling, and using products and supplies in this occupation.

- 6 Given a Customary (or metric) measurement, find the metric (or Customary) equivalent on a conversion table.
- Given a Customary unit, state the replacement unit.

# SUGGESTED TEACHING SEQUENCE

- Assemble packages and containers of 1. materials.
- Present or make available Information 2 Sheet 10 and Table 3.
- 3. Have students find approximate metric-Customary equivalents by using Exercise 17.
- 4. Test performance by using Section D of "Testing Metric Abilities."

During the transition period there will be a need for finding equivalents between systems. Conversion tables list calculated equivalents between the two systems. When a close equivalent is needed, a conversion table can be used to find it. Follow these steps:

- Determine which conversion table is needed. 1.
- Look up the known number in the appropriate column; if not listed, find numbers you 2. can add together to make the total of the known number.
- 3. Read the equivalent(s) from the next column.

Table 3 on the next page gives an example of a metric-Customary conversion table which you can use for practice in finding approximate equivalents. Table 3 can be used with Exercise 17. Part 2 and Part 3.

Below is a table of metric-Customary equivalents which tells you what the metric replacements for Customary units are.\* This table can be used with Exercise 17. Part 1 and Part 3. The symbol ≈ means "nearly equal to."

$1 \text{ em} \approx 0.39 \text{ inch}$	1 inch $\approx 2.54$ cm	$1 \text{ ml} \approx 0.2 \text{ tsp}$	1 tsp ≈ 5 ml
$1 \text{ m} \approx 3.28 \text{ feet}$	1 foot ≈ 0.305 m	$1 \text{ ml} \approx 0.07 \text{ tbsp}$	1 tbsp ≈ 15 ml

## SECTION A

- 1. One kilogram is about the mass of a:
  - [A] nickel
  - [B] apple seed
  - [C] basketball
  - [D] Volkswagen "Beetle"
- 2. A square metre is about the area of:
  - [A] this sheet of paper
  - [B] a card table top
  - [C] a bedspread
  - [D] a postage stamp
- 3. Application rates of ink for paper are normally given in:
  - [A] grams per square metre
  - [B] litres per square metre
  - [C] kilograms per square centimetre
  - [D] grams per square centimetre
- 4. The mass of a press is measured in:
  - [A] centimetres
  - [B] kilograms
  - millilitres [C]
  - [D] cubic metres

- 5. The correct way to write twenty grams is:
  - [A] 20 gms
  - [B] 20 Gm.
  - [C] 20 g.
  - [D] 20 g

- 6. The correct way to write twelve thousand millimetres is:
  - [A] 12.000 mm.
  - [B] 12.000 mm
  - [C] 12 000mm
  - [D] 12 000 mm

#### SECTION B

- 7. A sheet of paper 20 centimetres wide also has a width of:
  - [A] 200 millimetres
  - [B] 2000 millimetres
  - [C] 2 millimetres
  - [D] 0.2 millimetre
- 8. A 7 500 gram drum of dry spray is the same as:
  - [A] 7 500 kilograms
  - [B] 7.5 kilograms
  - [C] 750 000 kilograms
  - [D] 0.75 kilogram

#### SECTION C

- 9. For measuring millimetres you would use a:
  - [A] scale
  - [B] container
  - [C] pressure gage
- 10. For measuring kilopascals you would use a:
  - [A] scale
  - [B] pressure gage

  - [D] ruler

- 11. Estimate the length of the line segment below:
  - [A] 23 grams
  - [B] 6 centimetres
  - [C] 40 millimetres
  - [D] 14 pascals
- 12. Estimate the length of the line segment below:
  - [A] 10 millimetres
  - [B] 4 centimetres
  - [0] 4 pascals
  - [D] 23 milligrams

#### SECTION D

- 13. The metric unit for liquid measure which replaces the fluid ounce is:
  - [A] litre
  - [B] gram
  - millilitre [C]
  - [D] hectare
- 14. The metric unit for liquid measure which replaces the gallon is:
  - [A] kilogram
  - [B] gram
  - kilolitre [C]
  - [D] litre

#### Use this conversion table to answer questions 15 and 16.

500	19.68	50	1.97
600	23.62	60	2.36
700	27.56	70	2.76
800	31.50	80	3.15
900	35.43	90	3.54

- 15. The equivalent of 290 mm is:
  - [A] 7.87 in.
  - [B] 29.32 in.
  - [C] 12.00 in.
  - [D] 11.41 in.
- 16. The equivalent of 460 mm is:
  - [A] 11.41 in.
  - [B] 12.34 in.
  - [C] 18.10 in.
  - [D] 24.00 in.

TESTING METRIC ABILITIES

THE CENTER FOR VOCATIONAL EDUCATION

- - [D] ruler
- - [C] container

#### EXERCISES 1 THRU 6

The answers depend on the items used for the activities.

#### EXERCISE 7

Currently accepted metric units of measurement for each question are shown in Table 2. Standards in each occupation are being established now, so answers may vary.

#### EXERCISE 8

a)	2.6 cm	e)	13.2 cm
b)	58.3 cm	f)	80.2 cm
c)	9.4 cm	g)	140.0 cm
d)	68.0 cm	h)	230.7 cm

#### EXERCISES 9 THRU 13

Tables are reproduced in total. Answers are in parentheses.

#### Exercise 9

metre m	centimetre cm	millimetre mm
1	100	1 000
2	200	(2 000)
3	(300)	(3 000)
9	(900)	(9 000)
( <b>5</b> )	(500)	5 000
74	(7 400)	(74 000)
0.8	80	(800)
0.6	(60)	600
(0.025)	2.5	25
(0.148)	(14.8)	148
(6.39)	639	(6 390)

# Exercise 10

millilitres ml	litres 1
3 000	3
6 000	(6)
(8 000)	8
(14 000)	(14)
(23 000)	23
300	0.3
700	(0.7)
(900)	0.9
250	(0.25)
(470)	0.47
275	(0.275)

# Exercise 11

litreș l	millilitres ml
8	8 000
5	(5 000)
46	(46 000)
(32)	32 000
0.4	(400)
0,53	(530)
(0.48)	480

# Exercise 12

# THE CENTER FOR VOCATIONAL EDUCATION

The Ohio State University + 1960 Kenny Road + Columbus Ohio 43210

# SUGGESTED METRIC TOOLS AND DEVICES NEEDED TO COMPLETE OCCUPATIONAL MEASUREMENT TASKS

In this occupation the tools needed to complete Exercises 6, 15, and 16 are indicated by " $\star$ ."

- A. Assorted Metric Hardware—Hex nuts, washers, screws, cotter pins, etc.
- B. Drill Bits-Individual bits or sets, 1 mm to 13 mm range
- C. Vernier Caliper-Pocket slide type, 120 mm range
- D. Micrometer—Outside micrometer caliper, 0 mm to 25 mm range
  - E. Feeler Gage-13 blades, 0.05 mm to 1 mm range
  - F. Metre Tape-50 or 100 m tape
  - G. Thermometers—Special purpose types such as a clinical thermometer
  - H. <sup>1</sup>Temperature Devices—Indicators used for ovens, freezing/ cooling systems, etc.
  - I. Tools-Metric open end or box wrench sets, socket sets, hex key sets
  - J. Weather Devices-Rain gage, barometer, humidity, wind velocity indicators
- K. <sup>1</sup> Pressure Gages—Tire pressure, air, oxygen, hydraulic, fuel, etc.
  - L. <sup>1</sup>Velocity-Direct reading or vane type meter
  - M. Road Map-State and city road maps
- ★ N. Containers—Buckets, plastic containers, etc., for mixing and storing liquids
  - O. Containers-Boxes, buckets, cans, etc., for mixing and storing dry ingredients

Most of the above items may be obtained from local industrial, hardware, and school suppliers. Also, check with your school district's math and science departments and/or local industries for loan of their metric measurement devices.

<sup>1</sup>Measuring devices currently are not available. Substitute devices (i.e., thermometer) may be used to complete the measurement task.

**Tools and Devices List** 

# REFERENCES

Going Metric with the U.S. Printing Industry. Clive A. Cameron, Graphic Arts Research Center, Rochester Institute of Technology, Rochester, NY 14623, 1972, 175 pages, \$8.70, paper.

Book on metric conversion for printing and graphics industry. Chapters on evolution of measurement; commentary on conversions in Britain and Japan; metric systems applications in paper and packaging, typesetting, and machinery and equipment; also has findings of survey on attitudes of graphic arts firms toward the metric standard. Has related tables and graphics.

Let's Measure Metric. A Teacher's Introduction to Metric Measurement. Division of Educational Redesign and Renewal, Ohio Department of Education, 65 S. Front Street, Columbus, OH 43215, 1975, 80 pages; \$1.50, must include check to state treasurer.

Activity-oriented introduction to the metric system designed for independent or group inservice education study. Introductory information about metric measurement; reproducible exercises apply metric concepts to common measurement situations; laboratory activities for individuals or groups. Templates for making metre tape, litre box, square centimetre grid.

Measuring with Meters, or, How to Weigh a Gold Brick with a Meter-Stick. Metrication Institute of America, P.O. Box 236, Northfield, IL 60093, 1974, 23 min., 16 mm, sound, color; \$310.00 purchase, \$31.00 rental.

Film presents units for length, area, volume and mass, relating each unit to many common objects. Screen overprints show correct use of metric symbols and ease of metric calculations. Relationships among metric measures of length, area, volume, and mass are illustrated in interesting and unforgettable ways.

Metric Education, An Annotated Bibliography for Vocational, Technical and Adult Education. Product Utilization, The Center for Vocational Education, The Ohio State University, Columbus, OH 43210, 1974, 149 pages; \$10.00.

Comprehensive bibliography of instructional materials, reference materials and resource list for secondary, post-secondary, teacher education, and adult basic education. Instructional materials indexed by 15 occupational clusters, types of materials, and educational level.

Metric Education, A Position Paper for Vocational, Technical and Adult Education. Product Utilization, The Center for Vocational Education, The Ohio State University, Columbus, OH 43210, 1975, 46 pages; \$3.00.

Paper for teachers, curriculum developers, and administrators in vocational, technical and adult education. Covers issues in metric education, the metric system, the impact of metrication on vocational and technical education, implications of metric instruction for adult basic education, and curriculum and instructional strategies. Metrics in Career Education. Lindbeck, John R., Charles A. Bennett Company, Inc., 809 W. Detweiller Drive, Peoria, IL 61614, 1975, 103 pages, \$3.60, paper; \$2.70 quantity school purchase.

Presents metric units and notation in a well-illustrated manner. Individual chapters on metrics in drafting, metalworking, woodworking, power and energy, graphic arts, and home economics. Chapters followed by several learning activities for student use. Appendix includes conversion tables and charts.

#### METRIC SUPPLIERS

Brown & Sharpe Manufacturing Co., Precision Park, North Kingstown, RI 02852

Industrial quality micrometers, steel rules, screw pitch and thickness gages, squares, depth gages, calipers, dial indicators, conversion charts and guides.

Dick Blick Company, P.O. Box 1267, Galesburg, IL 61401

Instructional quality rules, tapes, metre sticks, cubes, height measures, trundle wheels, measuring cups and spoons, personal scales, gram/kilogram scales, feeler and depth gages, beakers, thermometers, kits and other aids.

Millimeter Industrial Supply Corp., 162 Central Avenue, Farmingdale, L. I., NY 11735

Industrial fasteners, taps, dies, reamers, drills, wrenches, rings, bushings, calipers, steel rules and tapes, feeler gages.

The L. S. Starrett Company, 121 Crescent Street, Athol, MA 01331

Machine tool precision measuring devices, micrometers, calipers, dial indicators, steel rules.

#### INFORMATION SOURCES

American National Metric Council, 1625 Massachusetts Avenue, N.W., Washington, DC 20036

Charts, posters, reports and pamphlets, *Metric Reporter* newsletter. National metric coordinating council representing industry, government, education, professional and trade organizations.

Metric Committee, National Association of Photographic Manufacturers, 600 Mamaroneck Avenue, Harrison, NY 10528

Trade association which is establishing product standards, recommended practices for the use of measurement units, and coordinating metric changeover in the industry.

National Bureau of Standards, Office of Information Activities, U.S. Department of Commerce, Washington, D C 20234

Free and inexpensive metric charts and publications, also lends films and displays.
