### Comment

#### GPS Survey

1. Describe any public or private sector need for and/or dependency on the use of positioning, navigation, and timing, or any combination of these, services.

I am a consumer of the data provided by the GPS system living in Lakewood, Washington, USA. I use the GPS for primarily two functions: Ground Navigation and accurate timekeeping.

The navigation system in my car relies on GPS signals to determine with surprising accuracy, exactly where I am.

The exact current time is determined from the GPS signal, and displayed on the car's clock.

These same functions are also provided on my cellular phone.
