National Institute of

Standards and Technology U.S. Department of Commerce

USGv6 Program – Revision 1

What has changed?

- Update evolving standards & new IPv6 capabilities.
- Remove failed technologies from ~2008.
- Improve profile utility for specifying user requirements.
- Expand test program scope and completeness.
 - Test V6-Only capabilities
- Maintain alignment with IPv6Ready testing program.
- Simplify means of specifying requirements / capability.
- **Consolidate** and simplify program documentation.
- Enable other user groups reusing profile & test program.

Please Review & Comment !

DRAFT3 of USGv6 Revision 1 Specifications: <u>https://www.nist.gov/programs-projects/usgv6-program</u>

NIST and its partners in the USGv6 Program solicit public review and comment on the following revised specifications:

- "NIST IPv6 Profile", draft3-nist-sp-500-267ar1.pdf, October 2019.
- "NISTv6 Capabilities Table", draft3-nist-sp-500-267ar1s.pdf, October 2019.
- "USGv6 Profile", draft3-nist-sp-500-267br1.pdf, October 2019.
- "USGv6 Capabilities Table", draft3-nist-sp-500-267br1s.pdf , October 2019.
- "USGv6 Test Program Guide", draft3-nist-sp-500-281ar1.pdf, October 2019.
- "USGv6 Suppliers Declaration of Conformity", draft3-nist-sp-500-281ar1s.pdf , October 2019.
- "USGv6 Test Methods: General Description and Validation", draft3-nist-sp-500-281br1.pdf, October 2019.

Comments should be submitted to <u>usgv6-program@nist.gov</u> using the attached template: <u>draft-usgv6-r1-</u> <u>comment-template.xlsx</u>.

REVISED DRAFT DOCUMENTS AVAILABLE FOR A 3RD ROUND OF PUBLIC COMMENTS. COMMENTS DUE BY NOVEMBER 8, 2019.

Refactoring Program Documentation

Revised USGv6 Program Documentation.

USGv6 Program

USGv6-r1 Capabilities Table

USGv6-r1 Capabilities Table (UCT) - June 2019										
Reference	Section	Title	Capabilities	Host	Router	Other	Flag			
		IPv6-only Capabilities

RFC8319		Support for Adjustable Maximum Router Lifetimes per Link	ND-WL				N			
RFC3971		Secure Neighbor Discovery	SEND			_				
RFC6494		Certificate Profile and Certificate Management for SEcure Neighbor	SEND							
RFC6495		Subject Key Identifier (SKI) SEcure Neighbor Discovery (SEND) Name	SEND							
RFC4862		IPv6 Stateless Address Autoconfig	SLAAC	O:1=[SLAAC DHCP-Client]	М					
	5.3	Creation of Link Local Addresses	Core	M	М					
	5.4	Duplicate Address Detection	Core	M	M	_				
	5.5	Creation of Global Addresses	SLAAC	O:1=[SLAAC DHCP-Client]	M	_				
RFC8106		IPv6 Router Advertisement Options for DNS Configuration	SLAAC	O:1=[SLAAC DHCP-Client]	M	_	N			
RFC7217		Generating Semantically Opaque Interface Identifiers with SLAAC	SLAAC	O:1=[SLAAC DHCP-Client]		-	N			
RFC4941		Privacy Extensions for IPv6 SLAAC	PrivAddr	[]	-					
RFC8415		DHCPv6 Stateless (Two Message Exchange)	DHCP-Stateless		-	-	U			
RFC8415		Dynamic Host Config Protocol for IPv6	DHCP-Client	O:1=[SLAAC DHCP-Client]	-	_	U			

- IPv6 Specifications mapped into labeled *Capabilities*
 - Grouped by logic and function.
 - Testable units.
 - Aligned to industry testing programs.

Selection Criteria

National Institute of

Standards and Technology U.S. Department of Commerce

- Defined in terms of functional roles.
 - Host / Router
 - Client / Server
- Not Product Classes
 - Functional roles just identify different behavior / requirement classes in RFCs

• Why not just cite RFCs?

National Institute of

Standards and Technology U.S. Department of Commerce

- Organization of RFCs often contains both mandatory and optional behavior.
- Behavior for multiple functional roles.
- Organization often based upon packet formats.

Key Technical Changes

Testing in IPv6 Only Networks

- New IPv6-Only Capability
 - Users can require and vendors can declare support for IPv6-Only operation.
- Requires Full Life Cycle of product to be fully functional in absence of IPv4.
 - Install, Manage, Update, UI
- Requires other claimed capabilities to be tested in IPv6-Only environment.
 - Should we test other capabilities in IPv6-Only by default going forward?

	USGv6-r1 Capabilities Table (UCT) - June 2019

NIST IPv6 Profile

Capabilities Templates

- Defines broad capabilities groups
 - E.g. Security Capabilities
- Identifies *functional roles*
 - Host, Router, NPP, Application.
- Defines individual named capabilities
 - E.g., IPsec support for the IP security architecture.
 - Defines recommended requirement level
 - M → Mandatory
 - O → Optional
 - O:I → Optional, must choose 1
 - $X \rightarrow$ Not recommended
 - M = mandatory in IETF Node Requirements specification.
- Provides guidance
 - Text provides additional explanation of capability

NI	STv6-r1	:Host Capabilities Template:
•	Basic C	apabilities - see section 4.1
	0	[M] - Core - support for IPv6 core functions.
	0	[0] - Extended-ICMP - support for ICMPv6 extended messages.
	0	[0] - ND-Ext-NUD - support for extended for neighbor unreachable detection
	0	[O] - ND-Ext-Loss - support for packet-loss for router solicitations.
	0	[O] - ND-Ext-DAD - support for enhanced duplicate address detection.
	0	[0] - ND-Multi-FH - support for neighbor discovery in multi-prefix network.
	0	[O] - ND-SEND - support for neighbor discovery security extensions.
	0	[M] - SLAAC - support for stateless global address auto-configuration.
	0	[O] - PrivAddr - support for SLAAC privacy extensions.
	0	[O] - PrivAddr-Stable - support for SLAAC stable privacy extensions.
	0	[O] - DHCP-Stateless - support for stateless (DHCP) configuration.
	0	[O] - DHCP-Client - support for stateful (DHCP) address auto-configuration.
	0	[O] - DHCP-Prefix - support for stateful (DHCP) prefix delegation
	0	[O] - 6Lo - support for IPv6 over low power networks.
•	Addres	sing Capabilities - see section 4.6
	0	[M] - Addr-Arch - support for address architecture and selection.
	0	[O] - CGA - support for cryptographically generated addresses.
•	Networ	k Support Capabilities - see section 4.8
	0	[O] - DNS-Client - support for DNS client/resolver functions.
	0	[O] - URI - support for IPv6 uniform resource identifiers.
	0	[O] - DNS-Server - support for a DNS server capabilities.
	0	[O] - DHCP-Server - support for a DHCP server capabilities.
	0	[O] - DHCP-Relay - support for a DHCP relay capabilities.
•	Securit	Capabilities - see section 4.7
	0	[O] - IPsec - support for the IP security architecture.
	0	[O] - IPsec-IoT - support for IoT Cryptographic Algorithms.
	0	[O] - IPsec-CHACHA - support for ChaCha20 Cryptographic Algorithms.
	0	[O] - IPsec-SHA-512 - support for SHA-512 Cryptographic Algorithms.
	0	[O] - TLS - support for the Transport Layer Security architecture.
•	Transiti	on Mechanism Capabilities - see section 4.4
	0	[O] - Dual-Stack - support for dual-stack functions
	0	[O] - Tunneling - support for encapsulation tunnels of IPv6 over IPv4
	0	[O] - XLAT - support for transition mechanism 464XLAT.
•	Networ	k Management Capabilities - see section 4.8
	0	[O] - SNMP - support for simple network management protocol.
	0	[O] - NETCONF - support for network configuration functions.
•	Multica	st Capabilities - see section 4.9
	0	[O] - SSM - require full support for multicast communications.
	0	[M] - Multicast - support for link-local multicast communication.

- Quality of Service Capabilities see section 4.3
- [O] DiffServ support for Differentiated Services capabilities
 [O] ECN support for Explicit Congestion Notification.

NIST IPv6 Profile

Capabilities Requirements Definition

- Maps named capabilities to IETF specifications
 - By default, implies support of all the MUST requirements in RFC.
 - Where necessary, requirements of IETF specifications may be enhanced, with specific section references.
- Capability Combinations
 - Cap1 requirements apply with capability selected.
 - Cap2 & Cap3 requirements only apply when both capabilities are selected.
 - Cap4 | Cap5 requirements apply when either capability is selected.

Secu	rity Ca	pabilities	5

User Requirements & Product Capabilities

Capability Summary Strings

- CSS_NAME = Profile: Functional_Role + Capability + Capability + ...
- Can express choice [IPsec|TLS]
- Only form of requirements specification going forward.
 - Profile provides capability taxonomy and selection guidance.
 - User develops named capability strings to describe requirements.

Product Capabilities

- Products don't conform to the USGv6 profile, they conform to specific capability strings.
- SDoCs express product capabilities in terms of the same strings.
- A single "product" may support multiple capability configurations.

Default-Desktop = USGv6-r1:Host + Core + SLAAC + Addr-Arch + Multicast + Dual-Stack + DHCP-client + DNS-Client + URI + Link=Ethernet.

Default-App-Server = USGv6-r1:Host + Core + Addr-Arch + Multicast + Dual-Stack + [IPSec|TLS] + URI + DNS-Client + Link=Ethernet.

Default-Embedded = USGv6-r1:Host + Core + Addr-Arch + Multicast + SLAAC + Link=Ethernet

Default-IOT = USGv6-r1:Host + 6LoWPAN + Link=802.15.4

Default-Enterprise-Router = USGv6-r1:Router + Core + Addr-Arch + Multicast + [OSPF|ISIS] + [SNMP|NETCONF] + Dual-Stack + Link=Ethernet

Default-Intranet-Router = USGv6-r1:Router + Core + Addr-Arch + Multicast + OSPF + [SNMP|NETCONF] + [IPsec|TLS] + [Dual-Stack|Tunneling] + Multicast-Routing + Link=Ethernet

Default-CE-Router = USGv6-r1:Router + CE-Router + Link=Ethernet

Default-MAP-E = USGv6-r1:Router + CE-Router + MAP-E + Link=Ethernet

Default-Border-Router = USGv6-r1:Router + Core + Addr-Arch + Multicast + BGP + TLS + [OSPF|ISIS] + [SNMP|NETCONF] + Dual-Stack + Tunneling + Link=Ethernet

Default-SGW = USGv6-r1:Router + Core + TLS + IPsec-VPN + Link=Ethernet

Default-Firewall = USGv6-r1:NPP + Firewall

Default-IDS/IPS = USGv6-r1:NPP + IPS + IDS

Capability Summary Strings

National Institute of Standards and Technology U.S. Department of Commerce

• <Label>=Profile:<Host|Router|NPD>+<Capabilities>

- Labels are groups of the requirements a procurement might want to specify.
- Can specify capability choice. e.g. [DHCP-Client|SLAAC]
- A single product might have multiple capability strings for different stacks / management.
- Agency-Default-Server=USGv6-r1:Host+Core+SLAAC+Addr-Arch+Multicast+[IPsec|TLS]+DHCP-Client+URI+DNS-Client+Link=Ethernet

USGv6 Test Program

National Institute of Standards and Technology U.S. Department of Commerce

- USGv6 Test Program committed to converge / harmonize
 - IPv6 Ready Logo Test Specifications
 - NIST and IPv6 Forum sign MOU
 - DoD Generic Test Plan test cases

Claims of compliance documented using Supplier's Declaration of Conformity (SDoC)

USGv6 Testing Program Definitions

• Quality Program for Test Labs.

- Allows for 1st, 2nd, 3rd party labs.
- Requires 3rd party accreditation.
- Defines requirements for accreditation for specific test methods.
- Defines methods for inter-laboratory comparisons and quality control.

Defines Detailed Issues of Testing

Product life cycles

National Institute of Standards and Technology U.S. Department of Commerce

- Composite and OEM products
- Suppliers Declaration of Conformity (SDOC) reporting.

USGv6 Test Program

USGv6 Tested Product List

- https://www.iol.unh.edu/registry/usgv6
- Hosts Tested (298)
- Routers Tested (142)
- NPDs Tested (34)
- ~1400 products tested for USGv6
 - Over 10,000 products listed.

University of New Hampshire InterOperability Laboratory

Company	Product Name	Туре	Version Tested	Hardware	Software	Test Suites	SDoc

National Institute of Standards and Technology U.S. Department of Commerce

Coordination and Consolidation of Efforts!

Avoid Duplication of Efforts!

- Primary impact is creating undue burden on industry!
 - Divergent product requirements.
 - Repetitive, non-standard testing requirements.
 - Non portability of test results
 - Possible rejection of all profile / test efforts.
- Already many profile / test activities
 - <u>IPv6 Ready</u>, USGv6, <u>DoD/UCR</u>, <u>Broadband Forum</u>, <u>ETSI</u>, etc.
 - Country specific profiles / test programs beginning to emerge
 - <u>Malaysia</u>, etc.

Profile / Testing Convergence

- Conformance / interop testing of commodity products should converge to the maximum extent possible.
 - Open, standardized test suites.
 - Maximum leverage of industry driven test programs.
 - Common test reporting mechanism.

Use Case Specific Testing

• Free resources to focus more important testing issues such as: information assurance, system integration, performance, scaling, etc.

USGv6 Profile – Derived from NISTv6

Specified as delta to NISTv6r1

- Changes to capability selection recommendations.
- Changes to conformance requirements.

National Institute of Standards and Technology U.S. Department of Commerce

- New example CSS strings.
 - USGv6-Capable-Host = USGv6-r1:Host + IPv6-Only + Core + Addr-Arch + Multicast + [SLAAC|DHCP-Client] + [IPsec|TLS] + Link=Ethernet
 - USGv6-Capable-Router = USGv6-r1:Router + IPv6-Only + Core + Addr-Arch + Multicast + SLAAC + [IPsec|TLS] + [SNMP|NETCONF] + [CE-Router|OSPF|IS-IS|BGP] + DiffServ + [Tunneling-IP|Tunneling-UDP] + Link=Ethernet
 - USGv6-Capable-Switch = USGv6-r1:Switch + IPv6-Only + DHCPv6-Guard + RA-Guard + MLD-Snooping + Link=Ethernet
 - USGv6-Capable-Application = USGv6-r1:App-Serv + IPv6-Only + App-Serv=[TBD]

USGv6-r1:Host Capabilities Template:

- IPv6-Only Capabilities see section 4.2
 - o [M] IPv6-Only support for full product functionality on an IPv6-only network.
- Basic Capabilities see section 4.3
 - [O:1=[SLAAC | DHCP-Client]] SLAAC support for stateless global address autoconfiguration.
 - [O:1=[SLAAC | DHCP-Client]] DHCP-Client support for stateful (DHCP) address autoconfiguration.
- Security Capabilities see section Error! Reference source not found.
 - [O:1=[IPsec | TLS]] IPsec support for the IP security architecture.
 - o [O:1=[IPsec | TLS]] TLS support for Transport Layer Security architecture version 1.2.
 - [X] IPsec-IoT support for IoT Cryptographic Algorithms.
 - o [X] IPsec-CHACHA support for ChaCha20 Cryptographic Algorithms.
 - [X] IPsec-SHA-512 support for SHA-512 Cryptographic Algorithms.

USGv6 Profile Establishes a Vocabulary

• Example: Use of NISTv6 Profile to Express DoD requirements:

- Requirements from: "DoD IPv6 Standard Profiles For IPv6 Capable Products Version 6.0", DISR IPv6 Standards Technical Working Group, July 2011. Online at: <u>https://www.hpc.mil/images/hpcdocs/ipv6/disr_ipv6_profile_version_6_july_2011.pdf</u>
- DOD-Host = USGv6-r1:Host + Core + [SLAAC|DHCP-Client] + Addr-Arch + DNS-Client + Multicast + IPSec + [Dual-Stack|Tunneling] + Link=Ethernet
- **DOD-Simple-Server** = USGv6-r1:Host + Core + [SLAAC|DHCP-Client] + Addr-Arch + Link=Ethernet
- DOD-Advanced-Server = USGv6-r1:Host + Core + Addr-Arch + DNS-Client + Multicast + IPSec + [Dual-Stack|Tunneling] + Link=Ethernet
- DOD-Router = USGv6-r1:Router + Core + SLAAC + Addr-Arch + Multicast + IPSec + DS + SNMP + [Dual-Stack|Tunneling] + Link=Ethernet
- **DOD-L3-Switch** = USGv6-r1:Router + Core + Addr-Arch + Multicast + [Dual-Stack|Tunneling] + DS + Link=Ethernet
- **DOD-IAD** = Core + Addr-Arch + Multicast + Link=Ethernet

"USGv6 Conformance" - Misconceptions

Products can't "conform to USGv6 Profile".

- They can conform to a requirement defined in terms of the profile.
 - USGv6-Capable-Host = USGv6-r1:Host + IPv6-Only + Core + Addr-Arch + Multicast + [SLAAC|DHCP-Client] + [IPsec|TLS] + Link=Ethernet

Tested vs Approved Products?

- USGv6 Test Program results in a report of claimed and tested IPv6 product capabilities.
 - Having a USGv6 SDoC does not mean it is a USGv6 approved product!
- It is up to users to examine the results and to see if they meet their acquisition requirements requirements.

• FAR requirements

• "Unless the agency Chief Information Officer waives the requirement, when acquiring information technology using Internet Protocol, the requirements documents must include reference to the appropriate technical capabilities defined in the USGv6 Profile (NIST Special Publication 500-267) and the corresponding declarations of conformance defined in the USGv6 Test Program."

Defining Acquisition Requirements

- Appendix A of the NIST IPv6 profile and USGv6 Profile contain numerous examples of Capability Summary Strings.
 - Specifying a CSS for a specific type of product effectively defines an approved product list.
 - Adapt examples to your needs.
 - NIST-Laptop = USGv6-r1:Host + IPv6-Only + Core + Addr-Arch + Multicast + SLAAC + DHCP-Client + TLS + Link=WiFi
