Title of research need: Specific identification of shooters

Keywords: GSR, shooter identification, data analysis, analytical methods

Submitting subcommittee(s): GSR

Date Approved: 11/28/16

Background information:
1. Description of research need:

Current methods of GSR analysis can only point to who was involved in, or in very close proximity to, a weapon discharge. A statistically defensible method (or methods) are needed to push the field to the point where it is possible to provide a probabilistic assessment of how and to what degree the results support or refute the hypothesis that a sample was obtained from a shooter vs. a bystander. The research will require controlled studies relating to particle deposition and recovery, loss rate, particulate density on skin surfaces, recovery efficiency, and background/environmental levels across a broad population.

2. Key bibliographic references relating to this research need:

3a. In what ways would the research results improve current laboratory capabilities?

This data will be invaluable for data analysis and interpretation. Currently, reporting and testimony has to be limited to presence/absence of GSR. The results of this study (if successful) will increase the weight and value of GSR evidence and help to resolve issues related to shooter vs. by-stander.

3b. In what ways would the research results improve understanding of the scientific basis for the subcommittee(s)?

This study will supply critical data regarding GSR deposition, collection, and persistence as well as providing for a statistical tool for evidence evaluation

3c. In what ways would the research results improve services to the criminal justice system?

The ability to distinguish the shooter from by-standers will be invaluable in shooting investigations.

4. Status assessment (I, II, III, or IV):

<table>

(Approval is by majority vote of SAC. Once approved, forward to NIST for posting.)

1. Does the SAC agree with the research need?  Yes  No  ○

2. Does the SAC agree with the status assessment?  Yes  No  ○

If no, what is the status assessment of the SAC:  

Approval date: 11/28/16

(Approval is by majority vote of SAC. Once approved, forward to NIST for posting.)
