

Appendix B

Appendix B contains trellis plots of feature vector components of right index fingerprints of dataset DOS-C generated by NFIS and normalized match scores of vendor F. Green circles represent samples that are matched correctly and red ones represent samples that are not matched correctly. Each matrix plot (total of 5) corresponds to the bin of normalized match score as labeled. For example, the matrix plot labeled as “poor” contains samples that their normalized match scores are in bin 5 (Table 2 of the report).
