Hello, I’m sure other people have made note of this, but there appears to be a typo on page 16.

3.3 Communicating Cybersecurity Requirements with Stakeholders

The Framework provides a common language to communicate requirements among interdependent stakeholders responsible for the delivery of essential critical infrastructure services. Examples include:

- An organization may utilize a Target Profile to express cybersecurity risk management requirements to an external service provider (e.g., a cloud provider to which it is exporting data).
- An organization may express its cybersecurity state through a Current Profile to report results or to compare with acquisition requirements.
- A critical infrastructure owner/operator, having identified an external partner on whom that infrastructure depends, may use a Target Profile to convey required Categories and Subcategories.
- A critical infrastructure sector may establish a Target Profile that can be used among its constituents as an initial baseline Profile to build their tailored Target Profiles.

In addition, Implementation Tiers allow organizations to understand how they fit into the larger cybersecurity ecosystem. Organizations can better manage cybersecurity risk amongst stakeholders by assessing their position in both critical infrastructure and the broader digital economy.
