TEACHING AND LEARNING
THE METRIC SYSTEM

This metric instructional package was designed to meet job-related metric measurement needs of students. To use this package students should already know the occupational terminology, measurement terms, and tools currently in use. These materials were prepared with the help of experienced vocational teachers, reviewed by experts, tested in classrooms in different parts of the United States, and revised before distribution.

Each of the five units of instruction contains performance objectives, learning activities, and supporting information in the form of text, exercises, and tables. In addition, suggested teaching techniques are included. At the back of this package are objective-based evaluation items, a page of answers to the exercises and tests, a list of metric materials needed for the activities, references, and a list of suppliers.

Classroom experiences with this instructional package suggest the following teaching-learning strategies:

1. Let the first experiences be informal to make learning the metric system fun.
2. Students learn better when metric units are compared to familiar objects. Everyone should learn to "think metric." Comparing metric units to customary units can be confusing.
3. Students will learn quickly to estimate and measure in metric units by "doing."
4. Students should have experience with measuring activities before getting too much information.
5. Move through the units in an order which emphasizes the simplicity of the metric system (e.g., length to area to volume).
6. Teach one concept at a time to avoid overwhelming students with too much material.

Unit 1 is a general introduction to the metric system of measurement which provides informal, hands-on experiences for the students. This unit enables students to become familiar with the basic metric units, their symbols, and measurement instruments; and to develop a set of mental references for metric values. The metric system of notation also is explained.

Unit 2 provides the metric terms which are used in this occupation and gives experience with occupational measurement tasks.

Unit 3 focuses on job-related metric equivalents and their relationships.

Unit 4 provides experience with recognizing and using metric instruments and tools in occupational measurement tasks. It also provides experience in comparing metric and customary measurement instruments.

Unit 5 is designed to give students practice in converting customary and metric measurements. Students should learn to "think metric" and avoid comparing customary and metric units. However, skill with conversion tables will be useful during the transition to metric in each occupation.

Using These Instructional Materials

This package was designed to help students learn a core of knowledge about the metric system which they will use on the job. The exercises facilitate experiences with measurement instruments, tools, and devices used in this occupation and job-related tasks of estimating and measuring.

This instructional package also was designed to accommodate a variety of individual teaching and learning styles. Teachers are encouraged to adapt these materials to their own classes. For example, the information sheets may be given to students for self-study. References may be used as supplemental resources. Exercises may be used in independent study, small groups, or whole-class activities. All of the materials can be expanded by the teacher.

However, the opinions expressed herein do not necessarily reflect the position or policy of the U.S. Office of Education and no official endorsement by the U.S. Office of Education should be inferred.
UNIT 1

SUGGESTED TEACHING SEQUENCE

1. These introductory exercises may require two or three teaching periods for all five areas of measurement.
2. Exercises should be followed in the order given to best show the relationship between length, area, and volume.
3. Assemble the metric measuring devices (rules, tapes, scales, thermometers, and measuring containers) and objects to be measured.*
4. Set up the equipment at work stations for use by the whole class or as individualized resource activities.
5. Have the students estimate, measure, and record using Exercises 1 through 5.
6. Present information on notation and make Table 1 available.
7. Follow up with group discussion of activities.

*Other school departments may have devices which can be used. Metric suppliers are listed in the reference section.

OBJECTIVES

The student will demonstrate these skills for the Linear, Area, Volume or Capacity, Mass, and Temperature Exercises, using the metric terms and measurement devices listed here.

RULES OF NOTATION

1. Symbols are not capitalized unless the unit is a proper name (mm not MM).
2. Symbols are not followed by periods (m not m ).
3. Symbols are not followed by an s for plurals (25 g not 25 gs).
4. A space separates the numerals from the unit symbols (41 not 41).
5. Spaces, not commas, are used to separate large numbers into groups of three digits (45 271 km not 45,271 km).
6. A zero precedes the decimal point if the number is less than one (0.52 g not .52 g).
7. Litre and metre can be spelled either with an -re or -er ending.

Table 1-a

Table 1-b
LINEAR MEASUREMENT ACTIVITIES
Metre, Centimetre, Millimetre

I. THE METRE (m)

A. DEVELOP A FEELING FOR THE SIZE OF A METRE

1. Pick up one of the metre sticks and stand it up on the floor. Hold it in place with one hand. Walk around the stick. Now stand next to the stick. With your other hand, touch yourself where the top of the metre stick comes on you.

THAT IS HOW HIGH A METRE IS!

2. Hold one arm out straight at shoulder height. Put the metre stick along this arm until the end hits the end of your fingers. Where is the other end of the metre stick? Touch yourself at that end.

THAT IS HOW LONG A METRE IS!

3. Choose a partner to stand at your side. Move apart so that you can put one end of a metre stick on your partner’s shoulder and the other end on your shoulder. Look at the space between you.

THAT IS THE WIDTH OF A METRE!

B. DEVELOP YOUR ABILITY TO ESTIMATE IN METRES

Now you will improve your ability to estimate in metres. Remember where the length and height of a metre was on your body.

For each of the following items:

Estimate the size of the items and write your estimate in the ESTIMATE column. Measure the size with your metre stick and write the answer in the MEASUREMENT column.

Decide how close your estimate was to the actual measure. If your estimate was within 25% of the actual measure you are a “Metric Marvel.”

<table>
<thead>

</tr>
</tbody>
</table>

Exercise 1
(continued on next page)
II. THE CENTIMETRE (cm)

There are 100 centimetres in one metre. If there are 4 metres and 3 centimetres, you write 403 cm \((4 \times 100 \text{ cm}) + 3 \text{ cm} = 400 \text{ cm} + 3 \text{ cm}\).

A. DEVELOP A FEELING FOR THE SIZE OF A CENTIMETRE

1. Hold the metric ruler against the width of your thumbnail. How wide is it? ________ cm
2. Measure your thumb from the first joint to the end. ________ cm
3. Use the metric ruler to find the width of your palm. ________ cm
4. Measure your index or pointing finger. How long is it? ________ cm
5. Measure your wrist with a tape measure. What is the distance around it? ________ cm
6. Use the tape measure to find your waist size. ________ cm

B. DEVELOP YOUR ABILITY TO ESTIMATE IN CENTIMETRES

You are now ready to estimate in centimetres. For each of the following items, follow the procedures used for estimating in metres.

<table>
<thead>
<tr>
<th>Item</th>
<th>Estimate (cm)</th>
<th>Measurement (cm)</th>
<th>How Close Were You?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Length of a paper clip.</td>

<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Width of a postage stamp.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Length of a pencil.</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. Width of a sheet of paper.</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

III. THE MILLIMETRE (mm)

There are 10 millimetres in one centimetre. When a measurement is 2 centimetres and 5 millimetres, you write 25 mm \((2 \times 10 \text{ mm}) + 5 \text{ mm} = 20 \text{ mm} + 5 \text{ mm}\). There are 1,000 mm in 1 m.

A. DEVELOP A FEELING FOR THE SIZE OF A MILLIMETRE

Using a ruler marked in millimetres, measure:

1. Thickness of a paper clip wire. ________ mm
2. Thickness of your fingernail. ________ mm
3. Width of your fingernail. ________ mm
4. Diameter (width) of a coin. ________ mm
5. Diameter (thickness) of your pencil. ________ mm
6. Width of a postage stamp. ________ mm

B. DEVELOP YOUR ABILITY TO ESTIMATE IN MILLIMETRES

You are now ready to estimate in millimetres. For each of the following items, follow the procedures used for estimating in metres.

<table>
<thead>
<tr>
<th>Item</th>
<th>Estimate (mm)</th>
<th>Measurement (mm)</th>
<th>How Close Were You?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Thickness of a nickel.</td>

</tbody>
</table>
AREA MEASUREMENT ACTIVITIES
Square Centimetre, Square Metre

WHEN YOU DESCRIBE THE AREA OF SOMETHING, YOU ARE SAYING HOW MANY SQUARES OF A GIVEN SIZE IT TAKES TO COVER THE SURFACE.

I. THE SQUARE CENTIMETRE (cm²)
   A. DEVELOP A FEELING FOR A SQUARE CENTIMETRE
      1. Take a clear plastic grid, or use the grid on page 6.
      2. Measure the length and width of one of these small squares with a centimetre ruler.
         THAT IS ONE SQUARE CENTIMETRE!
      3. Place your fingernail over the grid. About how many squares does it take to cover your fingernail?
         ______cm²
      4. Place a coin over the grid. About how many squares does it take to cover the coin? ______cm²
      5. Place a postage stamp over the grid. About how many squares does it take to cover the postage stamp?
         ______cm²
      6. Place an envelope over the grid. About how many squares does it take to cover the envelope?
         ______cm²
      7. Measure the length and width of the envelope in centimetres. Length ______ cm; width ______ cm.
         Multiply to find the area in square centimetres.
         ______cm x ______cm = ______cm². How close are the answers you have in 6. and in 7.?

B. DEVELOP YOUR ABILITY TO ESTIMATE IN SQUARE CENTIMETRES
   You are now ready to develop your ability to estimate in square centimetres.

   Remember the size of a square centimetre. For each of the following items, follow the procedures used for estimating in metres.

<table>
<thead>
<tr>
<th>Estimate (cm²)</th>
<th>Measurement (cm²)</th>
<th>How Close Were You?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Index card.</td>
<td></td>
<td></td>
</tr>

</tr>
<tr>
<td>4. Window pane or desk top.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

II. THE SQUARE METRE (m²)
   A. DEVELOP A FEELING FOR A SQUARE METRE
      1. Tape four metre sticks together to make a square which is one metre long and one metre wide.
      2. Hold the square up with one side on the floor to see how big it is.
      3. Place the square on the floor in a corner. Step back and look. See how much floor space it covers.
      4. Place the square over a table top or desk to see how much space it covers.
      5. Place the square against the bottom of a door. See how much of the door it covers. How many squares would it take to cover the door? ______m²
         THIS IS HOW BIG A SQUARE METRE IS!

Exercise 2
(continued on next page)
B. DEVELOP YOUR ABILITY TO ESTIMATE IN SQUARE METRES

You are now ready to estimate in square metres. Follow the procedures used for estimating in metres.

VOLUME MEASUREMENT ACTIVITIES
Cubic Centimetre, Litre, Millilitre, Cubic Metre

I. THE CUBIC CENTIMETRE (cm³)
   A. DEVELOP A FEELING FOR THE CUBIC CENTIMETRE
      1. Pick up a colored plastic cube. Measure its length, height, and width in centimetres.
         THAT IS ONE CUBIC CENTIMETRE!
      2. Find the volume of a plastic litre box.
         a. Place a row of cubes against the bottom of one side of the box. How many cubes fit in the row? ______
         b. Place another row of cubes against an adjoining side of the box. How many rows fit inside the box to make one layer of cubes? ______
            How many cubes in each row? ______
            How many cubes in the layer in the bottom of the box? ______
         c. Stand a row of cubes up against the side of the box. How many layers would fit in the box? ______
            How many cubes in each layer? ______
            How many cubes fit in the box altogether? ______
         THE VOLUME OF THE BOX IS ______ CUBIC CENTIMETRES.
      d. Measure the length, width, and height of the box in centimetres. Length ______ cm; width ______ cm; height ______ cm. Multiply these numbers to find the volume in cubic centimetres.
         ______ cm x ______ cm x ______ cm = ______ cm³.
         Are the answers the same in c. and d.?

   B. DEVELOP YOUR ABILITY TO ESTIMATE IN CUBIC CENTIMETRES
      You are now ready to develop your ability to estimate in cubic centimetres.
      Remember the size of a cubic centimetre. For each of the following items, use the procedures for estimating in metres.

<table>
<thead>
<tr>
<th>Estimate (cm³)</th>
<th>Measurement (cm³)</th>
<th>How Close Were You?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Index card file box.</td>
<td>______</td>
<td>______</td>
</tr>
<tr>
<td>2. Freezer container.</td>
<td>______</td>
<td>______</td>
</tr>
<tr>
<td>3. Paper clip box.</td>
<td>______</td>
<td>______</td>
</tr>
<tr>
<td>4. Box of staples.</td>
<td>______</td>
<td>______</td>
</tr>
</tbody>
</table>

II. THE LITRE (l)
   A. DEVELOP A FEELING FOR A LITRE
      1. Take a one litre beaker and fill it with water.
      2. Pour the water into paper cups, filling each as full as you usually do. How many cups do you fill?
         THAT IS HOW MUCH IS IN ONE LITRE!
      3. Fill the litre container with rice.
         THAT IS HOW MUCH IT TAKES TO FILL A ONE LITRE CONTAINER!
B. DEVELOP YOURABILITY TO ESTIMATE IN LITRES

You are now ready to develop your ability to estimate in litres. To write two and one-half litres, you write 2.5 l, or 2.5 litres. To write one-half litre, you write 0.5 l, or 0.5 litre. To write two and three-fourths litres, you write 2.75 l, or 2.75 litres.

For each of the following items, use the procedures for estimating in metres.

<table>
<thead>
<tr>
<th>Estimate (l)</th>
<th>Measurement (l)</th>
<th>How Close Were You?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Medium-size freezer container.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Large freezer container.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Small freezer container.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Bottle or jug.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

III. THE MILLILITRE (ml)

There are 1,000 millilitres in one litre, 1 000 ml = 1 litre. Half a litre is 500 millilitres, or 0.5 litre = 500 ml.

A. DEVELOP A FEELING FOR A MILLILITRE

1. Examine a centimetre cube. Anything which holds 1 cm³ holds 1 ml.
2. Fill a 1 millilitre measuring spoon with rice. Empty the spoon into your hand. Carefully pour the rice into a small pile on a sheet of paper.

THAT IS HOW MUCH ONE MILLILITRE IS!
3. Fill the 5 ml spoon with rice. Pour the rice into another pile on the sheet of paper.

THAT IS 5 MILLILITRES, OR ONE TEASPOON!
4. Fill the 15 ml spoon with rice. Pour the rice into a third pile on the paper.

THAT IS 15 MILLILITRES, OR ONE TABLESPOON!

B. DEVELOP YOURABILITY TO ESTIMATE IN MILLILITRES

You are now ready to estimate in millilitres. Follow the procedures used for estimating metres.

<table>
<thead>
<tr>
<th>Estimate (ml)</th>
<th>Measurement (ml)</th>
<th>How Close Were You?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Small juice can.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Paper cup or tea cup.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Soft drink can.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

IV. THE CUBIC METRE (m³)

A. DEVELOP A FEELING FOR A CUBIC METRE

1. Place a one metre square on the floor next to the wall.
2. Measure a metre UP the wall.
3. Picture a box that would fit into that space.

THAT IS THE VOLUME OF ONE CUBIC METRE!

B. DEVELOP YOURABILITY TO ESTIMATE IN CUBIC METRES

For each of the following items, follow the estimating procedures used before.

<table>
<thead>
<tr>
<th>Estimate (m³)</th>
<th>Measurement (m³)</th>
<th>How Close Were You?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Office desk.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. File cabinet.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Small room.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Exercise 3
The mass of an object is a measure of the amount of matter in the object. This amount is always the same unless you add or subtract some matter from the object. Weight is the term that most people use when they mean mass. The weight of an object is affected by gravity; the mass of an object is not. For example, the weight of a person on earth might be 120 pounds; that same person’s weight on the moon would be 20 pounds. This difference is because the pull of gravity on the moon is less than the pull of gravity on earth. A person’s mass on the earth and on the moon would be the same. The metric system does not measure weight—it measures mass. We will use the term mass here.

The symbol for gram is g.
The symbol for kilogram is kg.
There are 1,000 grams in one kilogram, or 1,000 g = 1 kg.
Half a kilogram can be written as 500 g, or 0.5 kg.
A quarter of a kilogram can be written as 250 g, or 0.25 kg.
Two and three-fourths kilograms is written as 2.75 kg.

I. THE KILOGRAM (kg)
DEVELOP A FEELING FOR THE MASS OF A KILOGRAM

Using a balance or scale, find the mass of the items on the table. Before you find the mass, notice how heavy the object “feels” and compare it to the reading on the scale or balance.

<table>
<thead>
<tr>
<th>Mass (kg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. 1 kilogram box.</td>
</tr>
<tr>
<td>2. Textbook.</td>
</tr>
<tr>
<td>4. Package of paper.</td>
</tr>
<tr>
<td>5. Your own mass.</td>
</tr>
</tbody>
</table>

B. DEVELOP YOUR ABILITY TO ESTIMATE IN KILOGRAMS

For the following items ESTIMATE the mass of the object in kilograms, then use the scale or balance to find the exact mass of the object. Write the exact mass in the MEASUREMENT column. Determine how close your estimate is:

<table>
<thead>
<tr>
<th>Estimate (kg)</th>
<th>Measurement (kg)</th>
<th>How Close Were You?</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Bag of rice.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2. Bag of nails.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3. Large purse or briefcase.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>4. Another person.</td>
<td></td>
<td></td>
</tr>
<tr>
<td>5. A few books.</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
II. THE GRAM (g)

A. DEVELOP A FEELING FOR A GRAM

1. Take a colored plastic cube. Hold it in your hand. Shake the cube in your palm as if shaking dice. Feel the pressure on your hand when the cube is in motion, then when it is not in motion.
   THAT IS HOW HEAVY A GRAM IS!

2. Take a second cube and attach it to the first. Shake the cubes in first one hand and then the other hand; rest the cubes near the tips of your fingers, moving your hand up and down.
   THAT IS THE MASS OF TWO GRAMS!

3. Take five cubes in one hand and shake them around.
   THAT IS THE MASS OF FIVE GRAMS!

B. DEVELOP YOUR ABILITY TO ESTIMATE IN GRAMS

You are now ready to improve your ability to estimate in grams. Remember how heavy the 1 gram cube is, how heavy the two gram cubes are, and how heavy the five gram cubes are. For each of the following items, follow the procedures used for estimating in kilograms.

<table>
<thead>
<tr>
<th>Item</th>
<th>Estimate (g)</th>
<th>Measurement (g)</th>
<th>How Close Were You?</th>

<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
TEMPERATURE MEASUREMENT ACTIVITIES

Degree Celsius

I. DEGREE CELSIUS (°C)

Degree Celsius (°C) is the metric measure for temperature.

A. DEVELOP A FEELING FOR DEGREE CELSIUS

Take a Celsius thermometer. Look at the marks on it.

1. Find 0 degrees.
   WATER FREEZES AT ZERO DEGREES CELSIUS (0°C)
   WATER BOILS AT 100 DEGREES CELSIUS (100°C)

2. Find the temperature of the room. ______ °C. Is the room cool, warm, or about right?

3. Put some hot water from the faucet into a container.
   Find the temperature. ______ °C. Dip your finger quickly in and out of the water. Is the water very hot, hot, or just warm?

4. Put some cold water in a container with a thermometer.
   Find the temperature. ______ °C. Dip your finger into the water. Is it cool, cold, or very cold?

5. Bend your arm with the inside of your elbow around the bottom of the thermometer. After about three minutes find the temperature. ______ °C. Your skin temperature is not as high as your body temperature.

NORMAL BODY TEMPERATURE IS 37 DEGREES CELSIUS (37°C).
A FEVER IS 39°C.
A VERY HIGH FEVER IS 40°C.

B. DEVELOP YOUR ABILITY TO ESTIMATE IN DEGREES CELSIUS

For each item, ESTIMATE and write down how many degrees Celsius you think it is. Then measure and write the MEASUREMENT. See how close your estimates and actual measurements are.

<table>

UNIT 2

OBJECTIVES

The student will recognize and use the metric terms, units, and symbols used in this occupation.

- Given a metric unit, state its use in this occupation.
- Given a measurement task in this occupation, select the appropriate metric unit and measurement tool.

SUGGESTED TEACHING SEQUENCE

1. Assemble metric measurement tools (rules, tapes, scales, thermometers, etc.) and objects related to this occupation.
2. Discuss with students how to read the tools.
3. Present and have students discuss Information Sheet 2 and Table 2.
4. Have students learn occupationally-related metric measurements by completing Exercises 6 and 7.
5. Test performance by using Section A of "Testing Metric Abilities."

METRICS IN THIS OCCUPATION

Changeover to the metric system is under way. Large corporations are already using metric measurement to compete in the world market. The metric system has been used in various parts of industrial and scientific communities for years. Legislation, passed in 1975, authorizes an orderly transition to use of the metric system. As businesses and industries make this metric changeover, employees will need to use metric measurement in job-related tasks.

Table 2 lists those metric terms which are most commonly used in this occupation. These terms are replacing the measurement units used currently. What kinds of job-related tasks use measurement? Think of the many different kinds of measurements you now make and use Table 2 to discuss the metric terms which replace them. See if you can add to the list of uses beside each metric term.
### Metric Units for Technical Theatre Assistant

<table>

</tbody>
</table>

---

Exercise 7
UNIT 3

OBJECTIVE
The student will recognize and use metric equivalents.

- Given a metric unit, state an equivalent in a larger or smaller metric unit.

SUGGESTED TEACHING SEQUENCE
1. Make available the Information Sheets (3-8) and the associated Exercises (8-14), one at a time.
2. As soon as you have presented the Information, have the students complete each Exercise.
3. Check their answers on the page titled ANSWERS TO EXERCISES AND TEST.
4. Test performance by using Section B of "Testing Metric Abilities."

Look at the picture of the nail next to the ruler. The nail is 57 mm long. This is 5 cm + 7 mm. There are 10 mm in each cm, so 1 mm = 0.1 cm (one-tenth of a centimetre). This means that 7 mm = 0.7 cm, so 57 mm = 5 cm + 7 mm = 5 cm + 0.7 cm = 5.7 cm. Therefore 57 mm is the same as 5.7 cm.

Now measure the paper clip. It is 34 mm. This is the same as 3 cm + _______ mm. Since each millimetre is 0.1 cm (one-tenth of a centimetre), 4 mm = _______ cm. So, the paper clip is 34 mm = 3 cm + 4 mm = 3 cm + 0.4 cm = 3.4 cm. This means that 34 mm is the same as 3.4 cm.

Now you try some.

a) 26 mm = _______ cm
e) 132 mm = _______ cm
b) 533 mm = _______ cm
f) 802 mm = _______ cm
c) 94 mm = _______ cm
g) 1,400 mm = _______ cm
d) 680 mm = _______ cm
h) 2,307 mm = _______ cm

Exercise 8
### Metres, Centimetres, and Millimetres

There are 100 centimetres in one metre. Thus,

- $2 \text{ m} = 2 \times 100 \text{ cm} = 200 \text{ cm}$,
- $3 \text{ m} = 3 \times 100 \text{ cm} = 300 \text{ cm}$,
- $8 \text{ m} = 8 \times 100 \text{ cm} = 800 \text{ cm}$,
- $36 \text{ m} = 36 \times 100 \text{ cm} = 3600 \text{ cm}$.

There are 1000 millimetres in one metre, so

- $2 \text{ m} = 2 \times 1000 \text{ mm} = 2000 \text{ mm}$,
- $3 \text{ m} = 3 \times 1000 \text{ mm} = 3000 \text{ mm}$,
- $6 \text{ m} = 6 \times 1000 \text{ mm} = 6000 \text{ mm}$,
- $24 \text{ m} = 24 \times 1000 \text{ mm} = 24000 \text{ mm}$.

From your work with decimals you should know that

- one-half of a metre can be written $0.5 \text{ m}$ (five-tenths of a metre),
- one-fourth of a centimetre can be written $0.25 \text{ cm}$ (twenty-five hundredths of a centimetre).

This means that if you want to change three-fourths of a metre to millimetres, you would multiply by 1000. So

$$0.75 \text{ m} = 0.75 \times 1000 \text{ mm}$$

$$= \frac{75}{100} \times 1000 \text{ mm}$$

$$= \frac{75}{100} \times \frac{1000}{1} \text{ mm}$$

$$= \frac{75 \times 1000}{100} \text{ mm}$$

$$= 750 \text{ mm}.$$ This means that $0.75 \text{ m} = 750 \text{ mm}$.

### Information Sheet 4

Fill in the following chart.

<table>
<thead>
<tr>
<th>metre (m)</th>
<th>centimetre (cm)</th>
<th>millimetre (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>100</td>
<td>1000</td>
</tr>
<tr>
<td>2</td>
<td>200</td>
<td>2000</td>
</tr>
<tr>
<td>3</td>
<td>300</td>
<td>3000</td>
</tr>
<tr>
<td>9</td>
<td>900</td>

</tr>
<tr>
<td>74</td>
<td>7400</td>
<td>74000</td>
</tr>
<tr>
<td>0.8</td>
<td>80</td>
<td>800</td>
</tr>
<tr>
<td>0.6</td>
<td>60</td>
<td>600</td>
</tr>
<tr>
<td>2.5</td>
<td>250</td>
<td>2500</td>
</tr>
<tr>
<td>639</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Millilitres to Litres

There are 1000 millilitres in one litre. This means that

- 2000 millilitres is the same as 2 litres,
- 3000 ml is the same as 3 litres,
- 4000 ml is the same as 4 litres,
- 12000 ml is the same as 12 litres.

Since there are 1000 millilitres in each litre, one way to change millilitres to litres is to divide by 1000. For example,

- $1000 \text{ ml} = \frac{1000}{1000} \text{ litre} = 1 \text{ litre}$,
- $2000 \text{ ml} = \frac{2000}{1000} \text{ litres} = 2 \text{ litres}$.

And, as a final example,

- $28000 \text{ ml} = \frac{28000}{1000} \text{ litres} = 28 \text{ litres}$.

What if something holds 500 ml? How many litres is this? This is worked the same way.

$$500 \text{ ml} = \frac{500}{1000} \text{ litre} = 0.5 \text{ litre}$$ (five-tenths of a litre). So 500 ml is the same as one-half (0.5) of a litre.

Change 57 millilitres to litres.

$$57 \text{ ml} = \frac{57}{1000} \text{ litre} = 0.057 \text{ litre}$$ (fifty-seven thousandths of a litre).

### Information Sheet 5

Now you try some. Complete the following chart.

<table>
<thead>
<tr>
<th>millilitres (ml)</th>
<th>litres (l)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3000</td>
<td>3</td>
</tr>
<tr>
<td>6000</td>

</tr>
<tr>
<td>14000</td>
<td>14</td>
</tr>
<tr>
<td>300</td>
<td>0.3</td>
</tr>
<tr>
<td>700</td>
<td>0.7</td>
</tr>
<tr>
<td>250</td>
<td>0.25</td>
</tr>
<tr>
<td>275</td>
<td>0.275</td>
</tr>
</tbody>
</table>

### Exercise 9

**Information Sheet 4**

Fill in the following chart.

<table>
<thead>
<tr>
<th>metre (m)</th>
<th>centimetre (cm)</th>
<th>millimetre (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>100</td>
<td>1000</td>
</tr>
<tr>
<td>2</td>
<td>200</td>
<td>2000</td>
</tr>
<tr>
<td>3</td>
<td>300</td>
<td>3000</td>
</tr>
<tr>
<td>9</td>
<td>900</td>
<td>9000</td>
</tr>
<tr>
<td>74</td>
<td>7400</td>
<td>74000</td>
</tr>
<tr>
<td>0.8</td>
<td>80</td>
<td>800</td>
</tr>
<tr>
<td>0.6</td>
<td>60</td>
<td>600</td>
</tr>
<tr>
<td>2.5</td>
<td>250</td>
<td>2500</td>
</tr>
<tr>
<td>639</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Exercise 10

**Information Sheet 5**

Now you try some. Complete the following chart.

<table>
<thead>
<tr>
<th>millilitres (ml)</th>
<th>litres (l)</th>
</tr>
</thead>
<tbody>
<tr>
<td>3000</td>
<td>3</td>
</tr>
<tr>
<td>6000</td>
<td>6</td>
</tr>
<tr>
<td>14000</td>
<td>14</td>
</tr>
<tr>
<td>300</td>
<td>0.3</td>
</tr>
<tr>
<td>700</td>
<td>0.7</td>
</tr>
<tr>
<td>250</td>
<td>0.25</td>
</tr>
<tr>
<td>275</td>
<td>0.275</td>
</tr>
</tbody>
</table>

**Exercise 9**

**Exercise 10**
**Litres to Millilitres**

What do you do if you need to change litres to millilitres? Remember, there are 1,000 millilitres in one litre, or 1 litre = 1,000 ml.

So,

- 2 litres = 2 \times 1,000 ml = 2,000 ml,
- 7 litres = 7 \times 1,000 ml = 7,000 ml,
- 13 litres = 13 \times 1,000 ml = 13,000 ml,
- 0.65 litre = 0.65 \times 1,000 ml = 650 ml.

Now you try some. Complete the following chart.

<table>
<thead>
<tr>
<th>litres</th>
<th>millilitres</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>8,000</td>
</tr>
<tr>
<td>5</td>
<td></td>
</tr>
<tr>
<td>46</td>
<td>46,000</td>
</tr>
<tr>
<td>0.4</td>
<td></td>
</tr>
<tr>
<td>0.03</td>
<td>300</td>
</tr>
</tbody>
</table>

**Grams to Kilograms**

There are 1,000 grams in one kilogram. This means that:

- 2,000 grams is the same as 2 kilograms,
- 5,000 g is the same as 5 kg,
- 700 g is the same as 0.7 kg, and so on.

To change from grams to kilograms, you use the same procedure for changing from millilitres to litres.

Try the following ones.

<table>
<thead>
<tr>
<th>grams</th>
<th>kilograms</th>
</tr>
</thead>
<tbody>
<tr>
<td>4,000</td>
<td></td>
</tr>
<tr>
<td>9,000</td>
<td></td>
</tr>
<tr>
<td>23,000</td>
<td>8</td>
</tr>
<tr>
<td>300</td>
<td></td>
</tr>
<tr>
<td>275</td>
<td></td>
</tr>
</tbody>
</table>

**Kilograms to Grams**

To change kilograms to grams, you multiply by 1,000.

- 4 kg = 4 \times 1,000 g = 4,000 g,
- 23 kg = 23 \times 1,000 g = 23,000 g,
- 0.75 kg = 0.75 \times 1,000 g = 750 g.

Complete the following chart.

<table>
<thead>
<tr>
<th>kilograms</th>
<th>grams</th>
</tr>
</thead>
<tbody>
<tr>
<td>7</td>
<td>7,000</td>
</tr>
<tr>
<td>11</td>
<td></td>
</tr>
<tr>
<td>0.4</td>
<td>450</td>
</tr>
<tr>
<td>0.03</td>
<td>175</td>
</tr>
</tbody>
</table>

**Changing Units at Work**

Some of the things you use in this occupation may be measured in different metric units. Practice changing each of the following to metric equivalents by completing these statements.

a) 500 cm of rope is __________ m
b) 250 ml of paint is __________ l
c) 5 cm diameter pipe is __________ mm
d) 2,500 g of pigment is __________ kg
e) 750 mm chair rail is __________ cm
f) 0.25 l of paint is __________ ml
g) 2,000 kg of scenery is __________ t
h) 500 ml of machine oil is __________ l
i) 30 cm board width is __________ mm
j) 20 m of tape is __________ cm
k) 5 m of cloth fabric is __________ cm
l) 2,400 mm wood panel is __________ cm
m) 2 l of water is __________ ml
n) 500 g of nails is __________ kg
UNIT 4

OBJECTIVE

The student will recognize and use instruments, tools, and devices for measurement tasks in this occupation.

- Given metric and Customary tools, instruments, or devices, differentiate between metric and Customary.
- Given a measurement task, select and use an appropriate tool, instrument or device.
- Given a metric measurement task, judge the metric quantity within 25% and measure within 5% accuracy.

SUGGESTED TEACHING SEQUENCE

1. Assemble metric and Customary measuring tools and devices (rules, scales, drill bits, wrenches, micrometer) and display in separate groups at learning stations.

2. Have students examine metric tools and instruments for distinguishing characteristics and compare them with Customary tools and instruments.

3. Have students verbally describe characteristics.

4. Present or make available Information Sheet 9.

5. Mix metric and Customary tools or equipment at learning station. Give students Exercises 15 and 16.

6. Test performance by using Section C of "Testing Metric Abilities."

SELECTING AND USING METRIC INSTRUMENTS, TOOLS AND DEVICES

Selecting an improper tool or misreading a scale can result in an improper fit, damaged materials and wasted time and effort. For example, cutting lumber that measures 3 metres by 6 metres for an opening 3 feet by 6 feet (0.9 metres by 1.8 metres) would result in wasted time and materials. Here are some suggestions:

1. Find out in advance whether Customary or metric units, tools, instruments, or materials are needed for a given task.

2. Examine the tool or instrument before using it.

3. The metric system is a decimal system. Look for units marked off in whole numbers, tens or tenths, hundreds or hundredths.

4. Look for metric symbols on the tools or gages, such as m, mm, kg, g, kPa.

5. Look for decimal fractions (0.25) or decimal mixed fractions (2.50) rather than common fractions (3/8) on drill bits and power tool scales.

6. Some tools and materials may have a special metric symbol such as block M to show they are metric.

7. Don't force bolts, wrenches, or other devices which are not fitting properly.

8. Practice selecting and using tools, instruments, and devices.
WHICH TOOLS FOR THE JOB?

Practice and prepare to demonstrate your ability to identify, select, and use metric-scaled tools and instruments for the tasks given below. You should be able to use the measurement tools to the appropriate precision of the tool, instrument, or task.

Select and demonstrate or describe use of tools, instruments, or devices to:

1. Measure and cut a board 8 cm by 2 cm by 300 cm.
2. Estimate the cost of lumber to build a standard flat.
3. Calculate paint and water needed to paint an average box set.
4. Draw a floor plan to scale for a realistic interior.
5. Space windows in the upstage wall of a set.
6. Calculate the mass necessary to counterweight a curtain or prop drop.
7. Assemble steel shelving.
8. Replenish stock of angle iron.
9. Select the appropriate butt hinges for a stage door 75 cm wide.
10. Make a dutchman for a 360 cm flat.
11. Measure the height of a picture rail for a 510 cm wall.
12. Measure the distance from the first beam port to the downstage acting space.
13. Drill a hole for a stage screw.
14. Calculate mass of counterweight to fly specific actor.

MEASURING UP IN THEATER MANAGEMENT

For the tasks below, estimate the metric measurement to within 25% of actual measurement, and verify the estimation by measuring to within 5% of actual measurement.

<table>
<thead>
<tr>
<th>Estimate</th>
<th>Verify</th>
</tr>
</thead>
<tbody>

</tbody>
</table>
UNIT 5

OBJECTIVE

The student will recognize and use metric and Customary units interchangeably in ordering, selling, and using products and supplies in this occupation.

- Given a Customary (or metric) measurement, find the metric (or Customary) equivalent on a conversion table.
- Given a Customary unit, state the replacement unit.

SUGGESTED TEACHING SEQUENCE

1. Assemble packages and containers of materials.
2. Present or make available Information Sheet 10 and Table 3.
3. Have students find approximate metric- Customary equivalents by using Exercise 17.
4. Test performance by using Section D of "Testing Metric Abilities."

METRIC-CUSTOMARY EQUIVALENTS

During the transition period there will be a need for finding equivalents between systems. Conversion tables list calculated equivalents between the two systems. When a close equivalent is needed, a conversion table can be used to find it. Follow these steps:

1. Determine which conversion table is needed.
2. Look up the known number in the appropriate column; if not listed, find numbers you can add together to make the total of the known number.
3. Read the equivalent(s) from the next column.

Table 3 on the next page gives an example of a metric-Customary conversion table which you can use for practice in finding approximate equivalents. Table 3 can be used with Exercise 17, Part 2 and Part 3.

Below is a table of metric-Customary equivalents which tells you what the metric replacements for Customary units are.* This table can be used with Exercise 17, Part 1 and Part 3. The symbol \( \approx \) means "nearly equal to."

\[
egin{align*}
1 \text{ cm} & \approx 0.39 \text{ inch} & 1 \text{ inch} & \approx 2.54 \text{ cm} & 1 \text{ ml} & \approx 0.2 \text{ tsp} & 1 \text{ tsp} & \approx 5 \text{ ml} \\

Table 3
ANY WAY YOU WANT IT

1. You are working in a scenery construction shop. With the change to metric measurement some of the things you order, sell or use are marked only in metric units. You will need to be familiar with appropriate Customary equivalents in order to communicate with customers and suppliers who use Customary units. To develop your skill use the Table on Information Sheet 10 and give the approximate metric quantity (both number and unit) for each of the following Customary quantities.

<table>
<thead>
<tr>
<th>Customary Quantity</th>
<th>Metric Quantity</th>
</tr>
</thead>
<tbody>
<tr>
<td>a) 5 gals. of paint</td>
<td></td>
</tr>
<tr>
<td>b) 5 lbs. of dry pigment</td>
<td></td>
</tr>
<tr>
<td>c) 3/4 in. pipe</td>
<td></td>
</tr>
<tr>
<td>d) 12 ft. flat</td>
<td></td>
</tr>
<tr>
<td>e) 6 in. step</td>
<td></td>
</tr>
<tr>
<td>f) 32 ft. proscenium</td>
<td></td>
</tr>
<tr>
<td>g) 6 ft., 6 in. door</td>
<td></td>
</tr>
<tr>
<td>h) 2 lbs. of nails</td>
<td></td>
</tr>
<tr>
<td>i) 1/4 in. bolt</td>
<td></td>
</tr>
<tr>
<td>j) 4 in. wide paint brush</td>
<td></td>
</tr>
<tr>
<td>k) 2 in. screws</td>
<td></td>
</tr>
<tr>
<td>l) 30 lb. compressor pressure</td>
<td></td>
</tr>
<tr>
<td>m) 12 ft. steel measuring tape</td>
<td></td>
</tr>
<tr>
<td>n) 4 ft. wood panel</td>
<td></td>
</tr>
<tr>
<td>o) 20 yd. roll of tape</td>
<td></td>
</tr>
</tbody>
</table>

2. Use the conversion tables from Table 3 to convert the following:

<table>
<thead>
<tr>
<th>a) 150 mm = in.</th>
<th>f) 1/8 in. = mm</th>
</tr>
</thead>
<tbody>
<tr>
<td>b) 1 200 m = ft.</td>
<td>g) 3/8 in. = cm</td>
</tr>
<tr>
<td>c) 85 cm = in.</td>
<td>h) 12 in. = cm</td>
</tr>
<tr>
<td>d) 290 mm = in.</td>
<td>i) 72 ft. = m</td>
</tr>
<tr>
<td>e) 10 cm = in.</td>
<td>j) 7 1/4 ft. = cm</td>
</tr>
</tbody>
</table>

3. Complete the Requisition Form using the items listed. Convert the Customary quantities to metric before filling out the form. Complete all the information (Date, For, No., etc.). Order the following technical theatre supplies:

- a) 1 pt. of walnut oil stain
- b) 1 lb. of wall sizing
- c) 2 "C" clamps, 6 in.
- d) 1 gal. of white enamel paint
- e) 2 white pine boards, 1 in. by 8 in. by 9 ft.

REQUISITION

<table>
<thead>
<tr>
<th>QTY</th>
<th>UNIT</th>
<th>ITEM</th>
</tr>
</thead>
</table>

Requested by
Approved by
SECTION A

1. One kilogram is about the mass of a:
   [A] nickel
   [B] apple seed
   [C] basketball
   [D] Volkswagen "Beetle"

2. A square metre is about the area of:
   [A] this sheet of paper
   [B] a card table top
   [C] a bedspread
   [D] a postage stamp

3. The unit for measuring the length of bolts and screws is:
   [A] millimetre
   [B] milligram
   [C] kilogram
   [D] centimetre

4. The unit used to purchase a quantity of paint is:
   [A] centimetre
   [B] litre
   [C] square metre
   [D] cubic metre

5. The correct way to write twenty grams is:
   [A] 20 gms
   [B] 20 Gm.
   [C] 20 g
   [D] 20 g

6. The correct way to write twelve thousand millimetres is:
   [A] 12,000 mm.
   [B] 12,000 mm
   [C] 12,000 mm
   [D] 12,000 mm

7. A board 20 centimetres wide also has a width of:
   [A] 0.2 millimetre
   [B] 2 millimetres
   [C] 200 millimetres
   [D] 2,000 millimetres

8. A one kilogram hammer has a mass of:
   [A] 2,000 milligrams
   [B] 1,000 grams
   [C] 10 grams
   [D] 100 grams

9. For measuring millimetres you would use a:
   [A] scale
   [B] pressure gage
   [C] measuring cup or container
   [D] rule

10. For measuring millilitres you would use a:
    [A] scale
    [B] measuring cup or container
    [C] ruler
    [D] metre stick

SECTION B

11. Estimate the length of the line segment below:
    [A] 23 grams
    [B] 6 centimetres
    [C] 40 millimetres
    [D] 14 pascals

12. Estimate the length of the line segment below:
    [A] 0.3 millimetre
    [B] 2 millimetres
    [C] 200 millimetres
    [D] 2,000 millimetres

13. The metric unit for liquid measure which replaces the fluid ounce is:
    [A] litre
    [B] millilitre
    [C] gram
    [D] hectare

14. The metric unit for mass which replaces the ounce is:
    [A] kilogram
    [B] gram
    [C] metre
    [D] litre

SECTION C

15. The equivalent of 12 m is:
    [A] 36.35 ft.
    [B] 48.56 ft.
    [C] 39.37 ft.
    [D] 12.0 ft.

16. The equivalent of 23 m is:
    [A] 73.0 ft.
    [B] 70.46 ft.
    [C] 80.46 ft.
    [D] 75.46 ft.

Use this conversion table to answer questions 15 and 16.

ANSWERS TO EXERCISES AND TEST

EXERCISES 1 THRU 6
The answers depend on the items used for the activities.

EXERCISE 7
Currently accepted metric units of measurement for each question are shown in Table 2. Standards in each occupation are being established now, so answers may vary.

EXERCISE 8
a) 2.6 cm
e) 13.2 cm
b) 58.3 cm
f) 80.2 cm
c) 9.4 cm
g) 140.0 cm
d) 68.0 cm
h) 230.7 cm

EXERCISES 9 THRU 13
Tables are reproduced in total. Answers are in parentheses.

</tbody>
</table>

In this occupation the tools needed to complete Exercises 6, 15, and 16 are indicated by “*.”

- **A.** Assorted Metric Hardware—Hex nuts, washers, screws, cotter pins, etc.
- **B.** Drill Bits—Individual bits or sets, 1 mm to 13 mm range
- **C.** Vernier Caliper—Pocket slide type, 120 mm range
- **D.** Micrometer—Outside micrometer caliper, 0 mm to 25 mm range
- **E.** Feeler Gage—13 blades, 0.05 mm to 1 mm range
- **F.** Metre Tape—50 or 100 m tape
- **G.** Thermometers—Special purpose types such as a clinical thermometer
- **H.** Temperature Devices—Indicators used for ovens, freezing/cooling systems, etc.
- **I.** Tools—Metric open end or box wrench sets, socket sets, hex key sets
- **J.** Weather Devices—Rain gage, barometer, humidity, wind velocity indicators
- **K.** Pressure Gages—Tire pressure, air, oxygen, hydraulic, fuel, etc.
- **L.** Velocity—Direct reading or vane type meter
- **M.** Road Map—State and city road maps
- **N.** Containers—Buckets, plastic containers, etc., for mixing and storing liquids
- **O.** Containers—Boxes, buckets, cans, etc., for mixing and storing dry ingredients

Most of the above items may be obtained from local industrial, hardware, and school suppliers. Also, check with your school district’s math and science departments and/or local industries for loan of their metric measurement devices.

Measuring devices currently are not available. Substitute devices (i.e., thermometer) may be used to complete the measurement task.
