Document Title, Number, and Year:

- 1. What is the intended use of this document?** Describe the document's utility and the expected audience size. For example, is this standard expected to be followed nationwide by all forensic scientists or by specific-discipline forensic scientists? Is this a niche application that will be used rarely?
- 2. Is the document currently in use by the identified user?** Please quantify the relative population of users who have implemented this document. Explain if agencies or organizations have implemented this document. Please identify each and their relative size.
- 3. What methodology is currently in place?** Provide a brief overview of the methodologies currently in place, and whether these are standard methods or in-house developed. For in-house developed methods, are these validated and based on peer-review research? Briefly describe the differences between current method(s) and the new document.
- 4. What are the expected effects on practitioner/laboratory quality?** Will the document result in short-term or long-term changes in precision, accuracy, overall measurement uncertainty, quality control activities, or other quality related issues? If so, in what ways?

Please use this box if you need extra space for a response. Please include the question number(s) with the continuation of your response.
