Title of research need: Arc Mapping

Keyword(s): Fire patterns, origin determination, arc mapping, electrical systems, circuit protection, ground-fault circuit interrupters, arc-fault circuit interrupters

Submitting subcommittee(s): Fire and Explosion

Date Approved: 

(If SAC review identifies additional subcommittees, add them to the box above.)

Background Information:

1. Description of research need:
   Locating and interpreting electric arc damage on components of building electrical systems has been recognized as an origin determination tool for over twenty years. It has been included in NFPA 921 since 2001. The theory and technique of this method is based upon the wiring methods and components that were used in the past. As new techniques and components are used in building electrical systems, the creation of arc damage from a fire and the implications of that damage to origin determination need to be reevaluated. Ongoing research is needed to keep up with developments in electrical system technology such as new types of circuit protection. The proposal for research is to develop a coordinated research program to analyze the effects that electrical equipment such as ground-fault circuit interrupters (GFCI) and arc-fault circuit (AFCI) interrupters have on the process of arc-mapping.

2. Key bibliographic references relating to this research need:
   ATF Technical Bulletin 001 – Visual Characteristics of Fire Melting on Copper Conductors. ATF FRL.

3a. In what ways would the research results improve current laboratory capabilities?
   This research will help laboratories to better determine which scenarios are most prevalent in modern construction and therefore what tests should be conducted.

3b. In what ways would the research results improve understanding of the scientific basis for the subcommittee(s)?
3c. In what ways would the research results improve services to the criminal justice system?

This research will help the fire investigation community to apply a more systematic approach to the results of fire pattern analysis.

4. Status assessment (I, II, III, or IV):
