NOTE: THIS EQUIPMENT HAS BEEN TESTED AND FOUND TO COMPLY WITH THE LIMITS FOR A CLASS A DIGITAL DEVICE, PURSUANT TO PART 15 OF THE FCC RULES.

THESE LIMITS ARE DESIGNED TO PROVIDE REASONABLE PROTECTION AGAINST HARMFUL INTERFERENCE WHEN THE EQUIPMENT IS OPERATED IN A COMMERCIAL ENVIRONMENT. THIS EQUIPMENT GENERATES, USES, AND CAN RADIATE RADIO FREQUENCY ENERGY AND, IF NOT INSTALLED AND USED IN ACCORDANCE WITH THE INSTRUCTION MANUAL, MAY CAUSE HARMFUL INTERFERENCE TO RADIO COMMUNICATIONS. OPERATION OF THIS EQUIPMENT IN A RESIDENTIAL AREA IS LIKELY TO CAUSE HARMFUL INTERFERENCE IN WHICH CASE THE USER WILL BE REQUIRED TO CORRECT THE INTERFERENCE AT HIS OWN EXPENSE.

THIS DIGITAL APPARATUS DOES NOT EXCEED THE CLASS A LIMITS FOR RADIO NOISE EMISSIONS FROM DIGITAL APPARATUS AS SET OUT IN THE INTERFERENCE-CAUSING EQUIPMENT STANDARD ENTITLED “DIGITAL APPARATUS”, ICES-003 OF THE DEPARTMENT OF COMMUNICATIONS.

CET APPAREIL NUMERIQUE RESPECTE LES LIMITES DE BRUITS RADIOELECTRIQUES APPLICABLES AUX APPAREILS NUMERIQUES DE CLASSE A PRESCRITES DANS LA NORME SUR LE MATERIEL BROUILLEUR : “APPAREILS NUMERIQUES”, NMB-003 EDICTEE PAR LE MINISTRE DES COMMUNICATIONS.

Unauthorized changes or modifications to this equipment are not permitted.

INTRODUCTION

This manual covers installation, operation and troubleshooting for the Ohaus Analytical Standard balances, Models AS60, AS120, AS200 and AS260D. Type approved Analytical Standard balances, Models AS60E, AS120E and AS200E are setup to conform to OIML, EC and U.S. regulations. To insure proper operation of the balance, please read this manual completely.

DESCRIPTION

Ohaus Analytical Standard series balances are precision weighing instruments, designed to provide years of service with virtually no maintenance. The Analytical Standard series is constructed using a die-cast aluminum base finished with a durable epoxy powder paint which is resistant to commonly used acids, contains a one piece solid-state precision electronics PC board and a seven digit LCD display which is 0.6 inches in height. All Analytical Standard series electronic balances are factory set to measure in grams. To prevent measurements from being affected by air currents, a draft shield is mounted to the balance. A stainless-steel spill ring is removable for cleaning in the event of accidental spills. Power is supplied through an AC Adapter which is available in five configurations for world-wide usage. Accessories include: an RS232 interface kit which allows printing of results through an external computer, an RS232 interface cable with a print switch, a security device and calibration weights.
UNPACKING

Your Analytical Standard balance was shipped with the following items:

- a pan
- an AC power adapter
- a draft shield and spill ring
- this instruction manual
- your warranty card

It is recommended to save the carton and packing material for storing, transporting the balance or returning it for service.
INSTALLATION

Environment

The balance should always be used in an environment which is free from excessive air currents, corrosives, vibration, and temperature or humidity extremes. These factors will affect displayed weight readings.

DO NOT install the balance:

- Next to open windows or doors causing drafts or rapid temperature changes.
- Near air conditioning or heat vents.
- Near vibrating, rotating or reciprocating equipment.
- Near magnetic fields or equipment that generates magnetic fields.
- On an unlevel work surface.

Draft Shield and Spill Ring

To install the draft shield and spill ring:

1. Position the draft shield on top of the balance as shown (approximately 30 degrees counterclockwise from the base of the balance).

2. Looking down through the top of the shield, line up the hole in the bottom of the shield with the hole in the balance weighing mechanism.

3. Put the draft shield down, fitting the holes, and turn the shield clockwise until it locks into place.

4. Make sure that the draft shield is firmly locked in place.

5. Install the stainless steel spill ring inside of the draft shield with the raised surface facing up and correctly oriented.

CAUTION:

Never remove the draft shield with the pan in place.
Pan

Place the pan into the hole in the weighing mechanism.

AC Adapter

Plug the molded connector of the AC Adapter into the receptacle at the rear of the balance. Plug the AC Adapter into a convenient ac outlet. When power is applied to the balance, it will begin a 60 second self test cycle. During this time, if the balance is turned ON, the display will count down from 60 and display the word CHEC.

Leveling the Balance

The balance is equipped with a level indicator on the rear and two adjustable leveling feet. Adjust the leveling feet until the bubble appears in the center circle of the indicator.
OPERATION

Turning the Balance ON

With no load on the pan, switch the balance ON by pressing \( \text{ON} \). When first switched ON, all segments of the display should be on as shown in the illustration.

This display check will be displayed briefly, then the model number of the balance followed by a software revision number.

Warm Up

Before initially using the balance, allow time for it to adjust to changes in environment. The balance need only be plugged in to warm up. Recommended warm up period is 30 minutes.

Moveable FineRange™ Model (AS260D)

The AS260D offers both a fine range (lower capacity/higher readability) and a coarse range (higher capacity/lower readability). When first turned on, the balance is in the fine range. It remains in this range until the weight on the pan exceeds the fine range capacity. When weight on the pan is greater than the fine range capacity, the balance switches to the coarse range.

For balance with Moveable FineRange™, please note:

If the weight of the object on the platform exceeds the limit of the Moveable FineRange™, the balance will automatically change to the coarse range until either:

1. The load (excluding tare) is reduced to below the limit of the fine range.

2. \( \text{ON} \) is momentarily pressed, which tares the balance and reactivates the fine range.
Checking Calibration

Before using the balance, it should be calibrated. The balance has been calibrated before shipment, however, calibration is influenced by factors such as:

- Variations in the earth's gravitational field at different latitudes of the world.
- Rough handling.
- Changes in work location.
- Height above sea level.
- Environmental conditions.

To check the balance’s calibration, place a known mass on the center of the pan and read the displayed weight.

If the displayed weight differs from the known mass by more than acceptable limits, refer to the Calibration Menu and the Specifications at the rear of the manual.

Weighing

1. Press to zero the display.

2. Place the object(s) or material to be weighed on the pan.

3. Wait for the stability indicator to appear before reading the weight.
Zero/Tare

When weighing material or objects that must be held in a container, O/T enables you to store the container weight in the balance’s memory, separate from the weight of the material in the container.

1. Place an empty container on the pan. Its weight will be displayed.

2. Press .

   The display will show zero and the container’s weight will be stored in memory.

3. Add material to the container. As material is added, its net weight will be displayed.

4. Removing the container and material from the pan will cause the balance to display the container’s weight as a negative number.

   The weight remains in balance memory until is pressed again.
USING MENUS TO CONFIGURE THE BALANCE

Analytical Standard balances contain four display menus which enable you to calibrate and configure the balance for your specific operating requirements.

**Calibration Menu:** Used to calibrate the balance for span or linearity.

**User Menu:** Used to adapt the balance to environmental conditions.

**Setup Menu:** Used to enable or disable different balance features.

**Print Menu:** Used to configure the RS232 Interface.

Functions not allowed on verified balances have shaded backgrounds.

To access a menu, press and hold **OK** until desired menu appears, then release it.

Original factory default settings are shown in boldface type.

Use these buttons to step through menus and select submenus:

- **ON/OF** next selection
- **ON/OF** select displayed item

NOTE: PRINT menu appears only when RS232 option is installed.
CALIBRATION MENU

Analytical Standard balances can be calibrated in two ways: Span calibration or Linearity calibration. Span calibration resets the balance’s weighing range using two weight values: zero and a weight value at or near the balance’s capacity. Linearity calibration minimizes deviation between actual and displayed weights within the balance’s weighing range. Three weight values are used: zero, a weight value within the balances weighing range, and a weight value at or near the balance’s specified capacity. The following table shows the sequence in which submenus appear on the Calibration menu.

CALIBRATION MENU TABLE

<table>
<thead>
<tr>
<th>Span</th>
<th>Selects span calibration.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Lin</td>
<td>Selects linearity calibration.</td>
</tr>
<tr>
<td>End</td>
<td>Used to exit the Calibration menu.</td>
</tr>
</tbody>
</table>

Calibration Menu Protection

Calibration may be locked out to prevent unauthorized personnel from changing calibration. To lock out calibration menu, refer to the section titled Menu Lock-Out Protection.

NOTE: If calibration has been locked out, you will not be able to access it.

Calibration Masses

Before beginning calibration, make sure masses are on hand. If you begin calibration and realize masses are not available, either turn the balance off, or go through the procedure without masses. The balance will use previously stored calibration data. Calibration should be performed as necessary to ensure accurate weighing. Masses required to perform the procedures are listed in the adjacent table.

<table>
<thead>
<tr>
<th>CALIBRATION MASSES</th>
</tr>
</thead>
<tbody>
<tr>
<td>MODEL</td>
</tr>
<tr>
<td>-------</td>
</tr>
<tr>
<td>AS60</td>
</tr>
<tr>
<td>AS120</td>
</tr>
<tr>
<td>AS260D</td>
</tr>
<tr>
<td>AS200</td>
</tr>
</tbody>
</table>

Masses must meet or exceed ASTM Class 1 Tolerance. Calibration masses are available as accessories.
Span Calibration

1. Press and hold until CAL is displayed, then release it. Balance will display SPAN.

2. Press to start the Span calibration procedure.

3. When is released, C 0g will be displayed indicating that no weight should be on the pan.

4. Press . The display will show -C- momentarily, followed by the value of the weight which must be placed on the pan. Do not disturb the balance when -C- is displayed. Disturbances will result in improper calibration.

5. Place the required weight on the pan and press . The display will show -C- momentarily while the balance recalibrates.

6. When the weight on the pan is displayed along with the current unit indicator, the balance is recalibrated.
Linearity Calibration

1. Press and hold \( \text{ON} \) until CAL is displayed, then release it. Balance will display SPAN.

2. Press \( \text{OFF/MORE} \) and the display will show LIN.

3. Press \( \text{ON} \) to start the Linearity Calibration Procedure.

4. When \( \text{OFF/MORE} \) is released, C 0g will be displayed, indicating that no weight should be in the pan.

5. Press \( \text{ON} \). The display will show -C- momentarily, followed by the value of the weight which must be placed on the pan. Do not disturb the balance when -C- is displayed. Disturbances will result in improper calibration.

6. Place the required weight on the pan.
7. Press \( \text{ON} \). The display will show -C- momentarily, then C followed by the next weight to be placed on the pan.

8. Place the required weight on the pan, then press \( \text{OK} \). The display will show -C- momentarily, while the balance recalibrates.

9. When the weight on the pan is displayed along with the current indicator, the balance is recalibrated.

End

If you have entered the Calibration menu and do not wish to calibrate the balance, use END to return to normal weighing operations.

Repeately press \( \text{ON} \) until End is displayed.

Press \( \text{OK} \), when released, the balance will returned to normal weighing operations.
**USER MENU**

The User menu is used to adapt the balance to environmental conditions. It contains submenus which enable you to reset the balance to factory default settings or to select specific range settings. Access to the User menu can be disabled using the Lock out switch. The following table shows the sequence in which submenus appear on the User menu.

**USER MENU TABLE**

<table>
<thead>
<tr>
<th><strong>SET</strong></th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>RESET</strong></td>
<td>Sets all submenus below to original factory default settings. Reset does not appear if menu has been locked out.</td>
</tr>
<tr>
<td><strong>AL</strong></td>
<td>Specifies the averaging level.</td>
</tr>
<tr>
<td><strong>Stb</strong></td>
<td>Specifies the desired stability range.</td>
</tr>
<tr>
<td><strong>Auto-O</strong></td>
<td>Sets Auto-Zero threshold.</td>
</tr>
<tr>
<td><strong>End</strong></td>
<td>Used to exit the Setup menu and store your selections.</td>
</tr>
</tbody>
</table>

**User Menu Protection**

The User menu may be locked out to prevent unauthorized personnel from changing the settings. To lock out the User menu, refer to the section titled Menu Lock-Out Protection.

**NOTE:** If -SAFE- is displayed, the User menu has been locked out. Settings may be viewed but not changed. See the Menu Lock-Out Protection section to enable it for making changes.

To access the User menu, press and hold until USER is displayed, then re-release it.
To access a submenu:

1. Repeatedly press \( \text{SET} \) until the desired submenu is displayed.

2. Press \( \text{SET} \) to select the displayed submenu.

**NOTE:** You must use END to store any changes you make to the User menu.

The following sections describe each item on the User menu in detail.

**Reset to Factory Defaults**

This submenu enables you to reset all User menu selections to the factory default settings outlined in the adjacent table.

To reset to factory defaults:

1. Access the RESET submenu.

2. Press \( \text{SET} \) to change the setting.

3. Select YES to reset settings or, no to leave current settings.

4. Press \( \text{SET} \) to accept the displayed setting.

<table>
<thead>
<tr>
<th>FACTORY DEFAULTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Averaging Level</td>
</tr>
<tr>
<td>Stability Range</td>
</tr>
<tr>
<td>Auto-Zero Tracking</td>
</tr>
</tbody>
</table>
Averaging Level

Averaging level compensates for vibration or excessive air currents. During operation, the balance continually takes weight readings from the weighing cell. Successive readings are then digitally processed to achieve a stabilized display. Use this submenu to specify how much processing you need to obtain stable results.

NOTE: Averaging level does not affect balance accuracy.

Select one of four averaging levels using the adjacent table as a guide.

To view or change the averaging level:

1. Access the AL submenu to display the current setting.

2. Press \( \text{MORE} \) to change the setting.

3. Press \( \text{SET} \) to accept the displayed setting.

4. When \( \text{SET} \) is released, AL will be displayed again and the Setup menu will be returned.

<table>
<thead>
<tr>
<th>AVERAGING LEVEL</th>
</tr>
</thead>
<tbody>
<tr>
<td>AL 0 reduced stability, fastest stabilization time</td>
</tr>
<tr>
<td>AL 1 normal stability, normal stabilization time</td>
</tr>
<tr>
<td>AL 2 more stability, slow stabilization time</td>
</tr>
<tr>
<td>AL 3 maximum stability, slowest stabilization time</td>
</tr>
</tbody>
</table>
**Stability Range**

The stability range specifies how much a displayed weight may change while the stability indicator remains ON. When displayed weight changes beyond the allowable range, the stability indicator turns OFF indicating an unstable condition. Analytical Standard balances permit you to select one of four stability ranges (in divisions) as shown in the table.

When the RS232 interface is configured to print stable data only, the stability range also governs data output. Displayed data will only be output if it is within the selected stability range.

To view or change the stability range:

1. Access the Stb submenu to display the current setting.
2. Press to change the setting.
3. Press to accept the displayed setting.
4. When is released, Stb will be displayed again and the Setup menu will be returned.

**STABILITY RANGE**

<table>
<thead>
<tr>
<th>.5d</th>
<th>smallest range: stability indicator is ON only when displayed weight is within .5 divisions</th>
</tr>
</thead>
<tbody>
<tr>
<td>1d</td>
<td>reduced range</td>
</tr>
<tr>
<td>2d</td>
<td>normal range</td>
</tr>
<tr>
<td>5d</td>
<td>largest range: stability indicator is ON even though displayed weight changes slightly</td>
</tr>
</tbody>
</table>

**Auto-Zero**

Auto-Zero minimizes the effects of temperature changes and shift on the zero reading. By defining a threshold level in divisions, the balance maintains the zero display until the threshold is exceeded. This submenu permits you to select one of three threshold levels, or turn the feature OFF. Auto-Zero only functions when the display reads zero.
To view or change the Auto-Zero setting:

1. Access the Auto-0 submenu to display the current setting.

2. Press to change the setting.

3. Press to accept the displayed setting.

4. When is released, Auto-0 will be displayed again and the User menu will be returned.

End

You must use END to exit the User menu. Changes you make in the User menu are only stored in memory if you use END.

1. To exit the User menu and store your settings, press when End is displayed.

2. When is released, the balance will be returned to normal weighing operations.

AUTO ZERO

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>OFF</td>
<td>turns Auto-Zero OFF</td>
</tr>
<tr>
<td>.5d</td>
<td>sets threshold to .5 divisions</td>
</tr>
<tr>
<td>1d</td>
<td>sets threshold to 1 division</td>
</tr>
<tr>
<td>3d</td>
<td>sets threshold to 3 divisions</td>
</tr>
</tbody>
</table>
**SETUP MENU**

The Setup menu enables you to retain program balance parameters once they have been set. Access to the Setup menu can be disabled using the Lock out switch. The following table shows the sequence in which submenus appear on the Setup menu.

**SETUP MENU TABLE**

<table>
<thead>
<tr>
<th>Setting</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>LFE</strong></td>
<td>Sets balance for type approved operation.</td>
</tr>
<tr>
<td><strong>LOC56W</strong></td>
<td>Enables individual or all menus to be locked out.</td>
</tr>
<tr>
<td><strong>End</strong></td>
<td>Used to exit the Setup menu and store your selections.</td>
</tr>
</tbody>
</table>

**Setup Menu Protection**

The Setup menu may be locked out to prevent unauthorized personnel from changing settings. To lock out the Setup menu, refer to the section titled Menu Lock-Out Protection.

**NOTE:** If **SAFE** is displayed, the Setup menu has been locked out. Settings may be viewed but not changed. See the Menu Lock-Out Protection section to enable it for making changes.

To access the Setup menu, press and hold until SETUP is displayed, then release it.
To access a submenu:

1. Repeatedly press \( \text{MODE} \) until the desired submenu is displayed.

2. Press \( \text{MODE} \) to select the displayed submenu.

**NOTE:** You must use END to store any changes you make to the Setup menu.

The following sections describe each item on the Setup menu in detail.

**Type Approved Balance**

This parameter can be set to ON or OFF. Selecting ON automatically sets certain parameters for type approved requirements.

1. Access the LFT submenu.

2. The display will show the current status (ON/OFF). If ON is selected, Auto-Zero Tracking will be limited to 0.5d or OFF and Lock switch default becomes Setup.

3. Press \( \text{MODE} \) to change the status.

4. Press \( \text{MODE} \) to accept the status.

5. When \( \text{MODE} \) is released, the display will show LFT.
**Lockswitch**

Lockswitch enables you to lock out one or more menu selections. Each menu can be individually locked YES, or unlocked NO. Set the appropriate balance functions, and then decide which functions of the balance are to be locked. The Calibration, User, and Setup menus can be individually locked by selecting YES for the appropriate menu, and then locked by the switch located under the right hand side of the control panel.

1. Access the LOCSW submenu. When is released, the LOCSW submenu is displayed.

2. To access one or more menus, press to select the calibration menu, -CAL- is displayed.

**NOTE**: Pressing changes the selection to the other menus.

3. To select a YES or NO, press .

**NOTE**: The switch acts as a toggle and can select either YES or NO.

4. To confirm your selection, press again. The display indicates the last menu you were in.
5. To lock out the other menus, press \( \text{Menu Lock} \) and repeat the procedure in steps 3 and 4.

End

You must use END to exit the Setup menu. **Changes you make in the Setup menu are only stored in memory if you use END.**

1. To exit the Setup menu and store your settings, press \( \text{Menu} \) when END is displayed.

2. When \( \text{Menu} \) is released, the balance will be returned to normal weighing operations.
MENU LOCK-OUT PROTECTION

Access to the Calibration, User, and Setup menus, can be disabled using the lock out switch located under the right side of the balance, near the display.

1. Turn the display off and unplug the power cord.

2. Slide the balance toward you, with the front over the edge of a table. (You can also turn the balance on its left side, but if you do, you MUST remove the pan and spill ring first!)

3. Locate hole under display where switch is located.

4. Using a small screwdriver, slide the switch forward for LOCKED or back for UNLOCKED.

5. Plug in the power cord and turn on the balance.
Analytical Standard Balances, Models AS60E, AS120E and AS200E may be sealed for type approved applications. Factory sealed balances include a bracket, lead seal and wire and security screw as shown in the figure below.

Type approved balances are Class I devices, consult local Weights and Measures officials to determine scaling requirements. If the balance needs to be sealed in the field, a wrench has been provided.

After the balance has been set up properly and the menus are locked out (LFT menu selection set ON), proceed as follows to seal the balance:

1. Turn OFF and unplug the balance. Remove the Draft Shield, Spill Ring and Pan.
2. Turn the balance over and locate the access hole to the lock out switch.
3. Remove the existing screw next to the access hole and discard.
4. Place the Bracket supplied over the access hole and secure with the Security Screw supplied. Tighten with the Wrench supplied.
5. Obtain the Lead Seal and wire. Pass the wire through the Security Screw and the eyelet on the Bracket as shown in the illustration.
6. Crimp the lead seal tightly. Turn the balance over and reinstall items removed.
CARE AND MAINTENANCE

To keep the balance operating properly, the housing, spill pan and pan should be kept clean and free from foreign material. If necessary, a cloth dampened with a mild detergent may be used. Keep calibration weights in a safe dry place.

TROUBLESHOOTING

<table>
<thead>
<tr>

<td>Balance was not zeroed before weighing.</td>
<td>Press [image] with no weight on the pan, then weigh item.</td>
</tr>
<tr>
<td></td>
<td>Balance not properly calibrated.</td>
<td>Recalibrate correctly.</td>
</tr>
<tr>
<td>Unable to store menu settings/changes.</td>
<td>END not being used to exit menus.</td>
<td>You MUST use END to exit menus and save settings.</td>
</tr>
<tr>
<td>RS232 interface not working (when installed).</td>
<td>Print menu settings not properly set up.</td>
<td>Verify interface settings in Print menu correspond to those of peripheral device.</td>
</tr>
<tr>
<td></td>
<td>Cable connections.</td>
<td>Check cable connections.</td>
</tr>
<tr>
<td>Random segments displayed or display locks up.</td>
<td>Microprocessor lock-up.</td>
<td>Unplug the power cord, then replug again. If condition persists, unit must be serviced.</td>
</tr>
<tr>
<td>Unable to change settings.</td>
<td>Lock switch set ON.</td>
<td>Set Lock switch to OFF.</td>
</tr>
<tr>
<td></td>
<td>LFT set ON.</td>
<td>Set LFT OFF, in LFT applications, seal will be broken. Breaking the seal will nullify the legal application.</td>
</tr>
<tr>
<td>Unstable readings.</td>
<td>Vibration on table surface.</td>
<td>Place balance on a stable surface or change averaging level.</td>
</tr>
<tr>
<td>Error message display.</td>
<td></td>
<td>See Error Codes Table.</td>
</tr>
</tbody>
</table>
Error Codes

The following list describes the various error codes and which can appear on the display and the suggested remedy.

Data Errors

0.0 Transient error (hardware error, probably static discharge). If error persists, the balance must be serviced.

Zero/Tare Errors

2.0 Balance is unable to stabilize within time limit after zero/taring. Environment is too hostile or balance needs recalibration.

Calibration Errors

3.0 Incorrect or no calibration weight used for calibration. Recalibrate with correct weights.

RS232 Errors

4.0 Bad RS232 frame. Check RS232 menu parameters and correct.

4.4 RS232 buffer is full (if installed). May occur if no printer or computer is connected to the interface. To clear buffer, turn balance off or enter Print menu and select END.

4.5 Function is disabled by the Lock switch.

User Errors

7.2 Number outside of display capacity.

Over-Under Load Errors

8.0 Hardware error causing an internal weight signal which is too low. Check if pan or pan support is off. If not, the balance must be serviced.

8.1 Hardware error caused by an internal weight signal which is too high. Check load on the platform which may be excessive. If error persists, the balance must be serviced.

8.2 Power-on load out of specification: Balance was turned on with load on pan or pan off balance. No load may be on pan when turned on and pan must be in place.

8.3 Rated capacity exceeded. Remove excessive weight from pan.

8.4 Underload condition on balance. Check that the proper pan and pan support are installed.
Error Codes (Cont.)

Checksum Errors

9.0  Bad factory checksum.  If error persists, have the balance serviced.

9.5  Bad factory calibration checksum.  If error persists, have the balance serviced.

9.6  Bad mode checksum.  Turn the balance off using the front panel controls.  If the error persists, have the balance serviced.

9.7  Invalid setup data checksum. Check Setup, User and Print menu (when RS232 is installed) settings. If possible, try to enter menus and exit using END to restore menu settings. May be caused by a faulty component, or in rare cases, a severe static charge. If error persists, balance must be serviced.

9.8  Hardware error causing invalid calibration data checksum. Balance may need recalibration - particularly linearity calibration. If error persists, balance must be serviced.

9.9  Invalid temperature compensation checksum. Balance will work with default temperature compensation data, however, error will occur each time balance is turned on. Have balance serviced.

SERVICE INFORMATION

If the Troubleshooting section does not resolve or describe your problem, you will need to contact an authorized Ohaus Service Agent. For Service assistance in the United States, please call Ohaus Corporation toll-free at (800) 526-0659. An Ohaus Product Service Specialist will be available to help you.

LIMITED WARRANTY

Ohaus products are warranted against defects in materials and workmanship from the date of delivery through the duration of the warranty period. During the warranty period Ohaus will repair, or, at its option, replace any component(s) that proves to be defective at no charge, provided that the product is returned, freight prepaid, to Ohaus.

This warranty does not apply if the product has been damaged by accident or misuse, exposed to radioactive or corrosive materials, has foreign material penetrating to the inside of the product, or as a result of service or modification by other than Ohaus. In lieu of a properly returned warranty registration card, the warranty period shall begin on the date of shipment to the authorized dealer. No other express or implied warranty is given by Ohaus Corporation. Ohaus Corporation shall not be liable for any consequential damages.

As warranty legislation differs from state to state and country to country, please contact Ohaus or your local Ohaus dealer for further details.
NOTE: THIS EQUIPMENT HAS BEEN TESTED AND FOUND TO COMPLY WITH THE LIMITS FOR A CLASS A DIGITAL DEVICE, PURSUANT TO PART 15 OF THE FCC RULES.

THESE LIMITS ARE DESIGNED TO PROVIDE REASONABLE PROTECTION AGAINST HARMFUL INTERFERENCE WHEN THE EQUIPMENT IS OPERATED IN A COMMERCIAL ENVIRONMENT. THIS EQUIPMENT GENERATES, USES, AND CAN RADIATE RADIO FREQUENCY ENERGY AND, IF NOT INSTALLED AND USED IN ACCORDANCE WITH THE INSTRUCTION MANUAL, MAY CAUSE HARMFUL INTERFERENCE TO RADIO COMMUNICATIONS. OPERATION OF THIS EQUIPMENT IN A RESIDENTIAL AREA IS LIKELY TO CAUSE HARMFUL INTERFERENCE IN WHICH CASE THE USER WILL BE REQUIRED TO CORRECT THE INTERFERENCE AT HIS OWN EXPENSE.

THIS DIGITAL APPARATUS DOES NOT EXCEED THE CLASS A LIMITS FOR RADIO NOISE EMISSIONS FROM DIGITAL APPARATUS AS SET OUT IN THE INTERFERENCE-CAUSING EQUIPMENT STANDARD ENTITLED "DIGITAL APPARATUS", ICES-003 OF THE DEPARTMENT OF COMMUNICATIONS.

CET APPAREIL NUMÉRIQUE RESPECTE LES LIMITES DE BRUITS RADIOÉLECTRIQUES APPLICABLES AUX APPAREILS NUMÉRIQUES DE CLASSE A PRESCRITES DANS LA NORME SUR LE MATÉRIAL BROUILLEUR : "APPAREILS NUMÉRIQUES", NMB-003 ÉDICTÉE PAR LE MINISTRE DES COMMUNICATIONS.

Unauthorized changes or modifications to this equipment are not permitted.

INTRODUCTION

This manual covers installation, operation and troubleshooting for the Ohaus Analytical Standard balance Model AS60C. The type approved Analytical Standard balance is setup to conform to OIML, EC and U.S. regulations. To insure proper operation of the balance, please read this manual completely.

DESCRIPTION

The Ohaus Analytical Standard Model AS60C balance is a precision weighing instrument, designed to provide years of service with virtually no maintenance. The Analytical Standard is constructed using a die-cast aluminum base finished with a durable epoxy powder paint which is resistant to commonly used acids, contains a one piece solid-state precision electronics PC board and a seven digit LCD display which is 0.6 inches in height. The Analytical Standard electronic balance is factory set to measure in grams or carats. A software menu allows measurements in grams (g), troy ounces (oz t), pennyweight (dwt), mommes (;), carats (ct), and taels for Hong Kong, Singapore and Taiwan. To prevent measurements from being affected by air currents, a draft shield is mounted to the balance. A stainless-steel spill ring is removable for cleaning in the event of accidental spills. Power is supplied through an AC adapter which is available in five voltages for world-wide usage. Accessories include: an RS232 interface kit which allows printing of results through an external computer, an RS232 interface cable with a print switch, a security device and calibration weights.

ANALYTICAL STANDARD Balance
UNPACKING

The Analytical Standard balance is shipped with the following items:

- a pan
- an AC power adapter
- a draft shield and spill ring
- a scoop
- an instruction manual
- a warranty card

It is recommended to save the carton and packing material for storing, transporting the balance or returning it for service.
INSTALLATION

Environment

The balance should always be used in an environment which is free from excessive air currents, corrosives, vibration, and temperature or humidity extremes. These factors will affect displayed weight readings.

DO NOT install the balance:

- Next to open windows or doors causing drafts or rapid temperature changes.
- Near air conditioning or heat vents.
- Near vibrating, rotating or reciprocating equipment.
- Near magnetic fields or equipment that generates magnetic fields.
- On an unlevel work surface.

Draft Shield and Spill Ring

To install the draft shield and spill ring:

1. Position the draft shield on top of the balance as shown (approximately 30 degrees counterclockwise from the base of the balance).

2. Looking down through the top of the shield, line up the hole in the bottom of the shield with the hole in the balance weighing mechanism.

3. Put the draft shield down, fitting the holes, and turn the shield clockwise until it locks into place.

4. Make sure that the draft shield is firmly locked in place.

5. Install the stainless steel spill ring inside of the draft shield with the raised surface facing up and correctly oriented.

CAUTION:

*Never* remove the draft shield with the pan in place.
**Pan**

Place the pan into the hole in the weighing mechanism.

**AC Adapter**

Plug the molded connector of the AC Adapter into the receptacle at the rear of the balance. Plug the AC Adapter into a convenient ac outlet. When power is applied to the balance, it will begin a 60 second self test cycle. During this time, if the balance is turned ON, the display will count down from 60 and display the word CHEC.

**Leveling the Balance**

The balance is equipped with a level indicator on the rear and two adjustable leveling feet. Adjust the leveling feet until the bubble appears in the center circle of the indicator.
OPERATION

Turning the Balance ON

With no load on the pan, switch the balance ON by pressing \(\text{CH}N\). When first switched ON, all segments of the display should be on as shown in the illustration.

This display check will be displayed briefly, then the model number of the balance followed by a software revision number.

Warm Up

Before initially using the balance, allow time for it to adjust to changes in environment. The balance need only be plugged in to warm up. Recommended warm up period is 30 minutes.
Checking Calibration

Before using the balance, it should be calibrated. The balance has been calibrated before shipment, however, calibration is influenced by factors such as:

- Variations in the earth's gravitational field at different latitudes of the world.
- Rough handling.
- Changes in work location.
- Height above sea level.
- Environmental conditions.

To check the balance’s calibration, place a known mass on the center of the pan and read the displayed weight.

If the displayed weight differs from the known mass by more than acceptable limits, refer to the Calibration Menu and the Specifications at the rear of the manual.

Weighing

1. Press to zero the display.

2. Place the object(s) or material to be weighed on the pan.

3. Wait for the stability indicator to appear before reading the weight.
Zero/Tare

When weighing material or objects that must be held in a container, O/T enables you to store the container weight in the balance’s memory, separate from the weight of the material in the container.

1. Place an empty container on the pan. Its weight will be displayed.

2. Press O/T.

The display will show zero and the container’s weight will be stored in memory.

3. Add material to the container. As material is added, its net weight will be displayed.

4. Removing the container and material from the pan will cause the balance to display the container’s weight as a negative number.

The weight remains in balance memory until O/T is pressed again.
USING MENUS TO CONFIGURE THE BALANCE

The Model AS60C Analytical Standard balance contains four display menus which enable you to calibrate and configure the balance for your specific operating requirements.

Calibration Menu: Used to calibrate the balance for span or linearity.

User Menu: Used to adapt the balance to environmental conditions.

Setup Menu: Used to enable or disable different balance features.

Print Menu: Used to configure the RS232 Interface.

Functions not allowed on verified balances have shaded backgrounds.

To access a menu, press and hold until desired menu appears, then release it.

Original factory default settings are shown in plain boldface type.

Use these buttons to step through menus and select submenus:

- next selection
- select displayed item
CALIBRATION MENU

The Model AS60C Analytical Standard balance can be calibrated in two ways: Span calibration or Linearity calibration. Span calibration resets the balance’s weighing range using two weight values: zero and a weight value at or near the balance’s capacity. Linearity calibration minimizes deviation between actual and displayed weights within the balance’s weighing range. Three weight values are used: zero, a weight value within the balance’s weighing range, and a weight value at or near the balance’s specified capacity. The following table shows the sequence in which submenus appear on the Calibration menu.

CALIBRATION MENU TABLE

<table>
<thead>
<tr>
<th>Submenu</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Span</td>
<td>Selects span calibration.</td>
</tr>
<tr>
<td>Line</td>
<td>Selects linearity calibration.</td>
</tr>
<tr>
<td>End</td>
<td>Used to exit the Calibration menu.</td>
</tr>
</tbody>
</table>

Calibration Menu Protection

Calibration may be locked out to prevent unauthorized personnel from changing calibration. To lock out calibration menu, refer to the section titled Menu Lock-Out Protection.

NOTE: If calibration has been locked out, you will not be able to access it.

Calibration Masses

Before beginning calibration, make sure masses are on hand. If you begin calibration and realize masses are not available, either turn the balance off, or go through the procedure without masses. The balance will use previously stored calibration data. Calibration should be performed as necessary to ensure accurate weighing. Masses required to perform the procedures are listed in the adjacent table.

<table>
<thead>
<tr>
<th>CALIBRATION MASSES</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>MODEL</strong></td>
</tr>
<tr>
<td>AS60C</td>
</tr>
</tbody>
</table>

Masses must meet or exceed ASTM Class 1 Tolerance. Calibration masses are available as accessories.
Span Calibration

1. Press and hold until CAL is displayed, then release it. Balance will display SPAN.

2. Press to start the Span Calibration Procedure.

3. When is released C 0g will be displayed indicating that no weight should be on the pan.

4. Press . The display will show -C- momentarily, followed by the value of the weight which must be placed on the pan. Do not disturb the balance when -C- is displayed. Disturbances will result in improper calibration.

5. Place the required weight on the pan and press . The display will show -C- momentarily while the balance recalibrates.

6. When the weight on the pan is displayed along with the current unit indicator, the balance is recalibrated.
Linearity Calibration

1. Press and hold until CAL is displayed, then release it. Balance will display SPAN.

2. Press and the display will show LIN.

3. Press to start the Linearity Calibration Procedure.

4. When is released, C 0g will be displayed, indicating that no weight should be on the pan.

5. Press . The display will show -C- momentarily, followed by the value of the weight which must be placed on the pan. Do not disturb the balance when -C- is displayed. Disturbances will result in improper calibration.

6. Place the required weight on the pan.
7. Press \( \text{ON} \). The display will show \(-C-\) momentarily, then C followed by the next weight to be placed on the pan.

8. Place the required weight on the pan, then press \( \text{ON} \). The display will show \(-C-\) momentarily, while the balance recalibrates.

9. When the weight on the pan is displayed along with the current indicator, the balance is recalibrated.

**End**

If you have entered the Calibration menu and do not wish to calibrate the balance, use END to return to normal weighing operations.

Repeately press \( \text{ON} \) until End is displayed.

Press \( \text{ON} \), when released, the balance will returned to normal weighing operations.
USER MENU

The User menu is used to adapt the balance to environmental conditions. It contains submenus which enable you to reset the balance to factory default settings or to select specific range settings. Access to the User menu can be disabled using the Lock out switch. The following table shows the sequence in which submenus appear on the User menu.

**USER MENU TABLE**

<table>
<thead>
<tr>
<th>Menu Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Reset</strong></td>
<td>Sets all submenus below to original factory default settings. Reset does not appear if menu has been locked out.</td>
</tr>
<tr>
<td><strong>AL</strong></td>
<td>Specifies the averaging level.</td>
</tr>
<tr>
<td><strong>Stb</strong></td>
<td>Specifies the desired stability range.</td>
</tr>
<tr>
<td><strong>Auto-O</strong></td>
<td>Sets Auto-Zero threshold.</td>
</tr>
<tr>
<td><strong>End</strong></td>
<td>Used to exit the Setup menu and store your selections.</td>
</tr>
</tbody>
</table>

**User Menu Protection**

The User menu may be locked out to prevent unauthorized personnel from changing the settings. To lock out the User menu, refer to the section titled Menu Lock-Out Protection.

**NOTE:** If -SAFE- is displayed, the User menu has been locked out. Settings may be viewed but not changed. See the Menu Lock-Out Protection section to enable it for making changes.

To access the User menu press and hold until USER is displayed, then release it.
To access a submenu:

1. Repeatedly press \( \text{SET} \) until the desired submenu is displayed.

2. Press \( \text{SET} \) to select the displayed submenu.

**NOTE:** You must use END to store any changes you make to the User menu.

The following sections describe each item on the User menu in detail.

**Reset to Factory Defaults**

This submenu enables you to reset all User menu selections to the factory default settings outlined in the adjacent table.

To reset to factory defaults:

1. Access the RESET submenu.

2. Press \( \text{SET} \) to change the setting.

3. Select YES to reset settings or, no to leave current settings.

4. Press \( \text{SET} \) to accept the displayed setting.

<table>
<thead>
<tr>
<th>USER MENU</th>
<th>FACTORY DEFAULTS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Averaging Level</td>
<td>AL 1</td>
</tr>
<tr>
<td>Stability Range</td>
<td>1d</td>
</tr>
<tr>
<td>Auto-Zero Tracking</td>
<td>.5d</td>
</tr>
</tbody>
</table>
**Averaging Level**

Averaging level compensates for vibration or excessive air currents. During operation, the balance continually takes weight readings from the weighing cell. Successive readings are then digitally processed to achieve a stabilized display. Use this submenu to specify how much processing you need to obtain stable results.

**NOTE:** Averaging level does not affect balance accuracy.

Select one of four averaging levels using the adjacent table as a guide.

To view or change the averaging level:

1. Access the AL submenu to display the current setting.

2. Press \[\text{AL} \] to change the setting.

3. Press \[\text{AL} \] to accept the displayed setting.

4. When \[\text{AL} \] is released, AL will be displayed again and the Setup menu will be returned.

<table>
<thead>
<tr>
<th>AVERAGING LEVEL</th>
</tr>
</thead>
<tbody>
<tr>
<td>AL 0</td>
</tr>
<tr>
<td><strong>AL 1</strong></td>
</tr>
<tr>
<td>AL 2</td>
</tr>
<tr>
<td>AL 3</td>
</tr>
</tbody>
</table>
Stability Range

The stability range specifies how much a displayed weight may change while the stability indicator remains ON. When displayed weight changes beyond the allowable range, the stability indicator turns OFF indicating an unstable condition. The Model AS60C Analytical Standard balance allows the selection of one of four stability ranges (in divisions) as shown in the table.

When the RS232 interface is configured to print stable data only, the stability range also governs data output. Displayed data will only be output if it is within the selected stability range.

To view or change the stability range:

1. Access the Stb submenu to display the current setting.

2. Press to change the setting.

3. Press to accept the displayed setting.

4. When is released, Stb will be displayed again and the Setup menu will be returned.

Auto-Zero

Auto-Zero minimizes the effects of temperature changes and shift on the zero reading. By defining a threshold level in divisions, the balance maintains the zero display until the threshold is exceeded. This submenu permits you to select one of three threshold levels, or turn the feature OFF. Auto-Zero only functions when the display reads zero.
To view or change the Auto-Zero setting:

1. Access the Auto-0 submenu to display the current setting.

2. Press \( \text{\textcircled{1}} \) to change the setting.

3. Press \( \text{\textcircled{2}} \) to accept the displayed setting.

4. When \( \text{\textcircled{1}} \) is released, Auto-0 will be displayed again and the User menu will be returned.

\[ .5 \ d \]

### AUTO ZERO

<table>
<thead>
<tr>
<th>OFF</th>
<th>turns Auto-Zero OFF</th>
</tr>
</thead>
<tbody>
<tr>
<td>.5d</td>
<td>sets threshold to .5 divisions</td>
</tr>
<tr>
<td>1d</td>
<td>sets threshold to 1 division</td>
</tr>
<tr>
<td>3d</td>
<td>sets threshold to 3 divisions</td>
</tr>
</tbody>
</table>

**End**

You must use END to exit the User menu. **Changes you make in the User menu are only stored in memory if you use END.**

1. To exit the User menu and store your settings, press \( \text{\textcircled{2}} \) when End is displayed.

2. When \( \text{\textcircled{1}} \) is released, the balance will be returned to normal weighing operations.
**SETUP MENU**

The Setup menu enables you to retain program balance parameters once they have been set. Access to the Setup menu can be disabled using the Lock out switch. The following table shows the sequence in which submenus appear on the Setup menu.

**SETUP MENU TABLE**

<table>
<thead>
<tr>
<th>Menu</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>LIFE</td>
<td>Sets balance for type approved operation.</td>
</tr>
<tr>
<td>SEL</td>
<td>Specifies which weighing units and operating modes will be available for operation.</td>
</tr>
<tr>
<td>LOCSWJ</td>
<td>Enables individual or all menus to be locked out.</td>
</tr>
<tr>
<td>End</td>
<td>Used to exit the Setup menu and store your selections.</td>
</tr>
</tbody>
</table>

**Setup Menu Protection**

The Setup menu may be locked out to prevent unauthorized personnel from changing settings. To lock out the Setup menu, refer to the section titled Menu Lock-Out Protection.

**NOTE:** If -SAFE- is displayed, the Setup menu has been locked out. Settings may be viewed but not changed. See the Menu Lock-Out Protection section to enable it for making changes.

To access the Setup menu, press and hold until SETUP is displayed, then release it.
To access a submenu:

1. Repeatedly press [ ] until the desired submenu is displayed.

2. Press [ ] to select the displayed submenu.

**NOTE**: You must use END to store any changes you make to the Setup menu.

The following sections describe each item on the Setup menu in detail.

**Type Approved Balance**

This parameter can be set to ON or OFF. Selecting ON automatically sets certain parameters for type approved requirements. Before setting LFT ON, the balance must be calibrated. See Calibration Menu for details. For sealing method, refer to Type Approved Balance Sealing section.

1. Access the LFT submenu.

2. The display will show the current status (ON/OFF). If ON is selected, Auto-Zero Tracking will be locked on to 0.5d. and Lock Switch default becomes Setup.

3. Press [ ] to change the status.

4. Press [ ] to accept the status.

5. When [ ] is released, the display will show LFT.
Unit Selection

Unit selection permits you to specify which weighing units will be enabled for use during operation. The adjacent table lists the units available.

To enable or disable the various weighing units, use the following procedure:

1. Access the SEL menu.

2. The display will show the grams unit indicator (g) along with the current status (ON/OFF).

3. Press \text{ON} \, \text{OFF} to change the status.

4. Press \text{ON} \, \text{OFF} to accept the displayed status. When \text{ON} \, \text{OFF} is released, the display will show the next unit indicator with the current status.

5. Set each unit ON or OFF as in step 3.

Taels

If taels are enabled, you will be required to choose one of three different taels: Hong Kong, Singapore, or Taiwan.

When the display shows TALEL 1, press \text{ON} \, \text{OFF} to change to another tael, press \text{ON} \, \text{OFF} to accept the displayed tael.

When the last weighing unit has been set, the display will show SEL again and the Setup menu will be returned.

</tr>
</tbody>
</table>
**Lock Switch**

Lock switch enables you to lock out one or more menu selections. Each menu can be individually locked YES, or unlocked NO. Set the appropriate balance functions, and then decide which functions of the balance are to be locked. The Calibration, User, and Setup menus can be individually locked by selecting YES for the appropriate menu, and then locked by the switch located under the right hand side of the control panel.

1. Access the LOCSW submenu.

When select, the LOCSW submenu is displayed.

2. To access one or more menus, press to select the calibration menu, -CAL- is displayed.

   NOTE: Pressing changes the selection to the other menus.

3. To select a YES or NO, press

   NOTE: The switch acts as a toggle and can select either YES or NO.

4. To confirm your selection, press again. The display indicates the last menu you were in.
5. To lock out the other menus, press and repeat the procedure in steps 3 and 4.

End
You must use END to exit the Setup menu. Changes you make in the Setup menu are only stored in memory if you use END.

To exit the Setup menu and store your settings, press when END is displayed.

When is released, the balance will be returned to normal weighing operations.
Access to the Calibration, User, and Setup menus, can be disabled using the lock out switch located under the right side of the balance, near the display.

1. Turn the display off and unplug the power cord.

2. Slide the balance toward you, with the front over the edge of a table. (You can also turn the balance on its left side, but if you do, you MUST remove the pan and spill ring first!)

3. Locate hole under display where switch is located.

4. Using a small screwdriver, slide the switch forward for LOCKED or back for UNLOCKED.

5. Plug in the power cord and turn on the balance.
**TYPE APPROVED BALANCE SEALING**

The AS60C balance contains parts used by local Weights and Measures officials for type approved sealing. Parts include a bracket, lead seal and wire, wrench and a security screw.

After the balance has been set up properly and the menus are locked out (LFT menu selection set ON), proceed as follows to seal the balance:

1. Turn OFF and unplug the balance. Remove the Draft Shield, Spill Ring and Pan.
2. Turn the balance over and locate the access hole to the lock out switch.
3. Remove the existing screw next to the access hole and discard.
4. Place the Bracket supplied over the access hole and secure with the Security Screw supplied. Tighten with the Wrench supplied.
5. Obtain the Lead Seal and wire. Pass the wire through the Security Screw and the eyelet on the Bracket as shown in the illustration.
6. Crimp the lead seal tightly. Turn the balance over and reinstall items removed.
**CARE AND MAINTENANCE**

To keep the balance operating properly, the housing, spill pan and pan should be kept clean and free from foreign material. If necessary, a cloth dampened with a mild detergent may be used. Keep calibration weights in a safe dry place.

</table>
Error Codes

The following list describes the various error codes and which can appear on the display and the suggested remedy.

Data Errors

0.0 Transient error (hardware error, probably static discharge). If error persists, the balance must be serviced.

Zero/Tare Errors

2.0 Balance is unable to stabilize within time limit after zero/taring. Environment is too hostile or balance needs recalibration.

Calibration Errors

3.0 Incorrect or no calibration weight used for calibration. Recalibrate with correct weights.

RS232 Errors

4.0 Bad RS232 frame. Check RS232 menu parameters and correct.

4.4 RS232 buffer is full (if installed). May occur if no printer or computer is connected to the interface. To clear buffer, turn balance off or enter Print menu and select END.

4.5 Function is disabled by the Lock switch.

User Errors

7.2 Number outside of display capacity.

Over-Under Load Errors

8.0 Hardware error causing an internal weight signal which is too low. Check if pan or pan support is off. If not, the balance must be serviced.

8.1 Hardware error caused by an internal weight signal which is too high. Check load on the platform which may be excessive. If error persists, the balance must be serviced.

8.2 Power-on load out of specification: Balance was turned on with load on pan or pan off balance. No load may be on pan when turned on and pan must be in place.

8.3 Rated capacity exceeded. Remove excessive weight from pan.

8.4 Underload condition on balance. Check that the proper pan and pan support are installed.
Error Codes (Cont.)

**Checksum Errors**

9.0  Bad factory checksum. If error persists, have the balance serviced.

9.5  Bad factory calibration checksum. If error persists, have the balance serviced.

9.6  Bad mode checksum. Turn the balance off using the front panel controls. If the error persists, have the balance serviced.

9.7  Invalid setup data checksum. Check Setup, User and Print menu (when RS232 is installed) settings. If possible, try to enter menus and exit using END to restore menu settings. May be caused by a faulty component, or in rare cases, a severe static charge. If error persists, balance must be serviced.

9.8  Hardware error causing invalid calibration data checksum. Balance may need recalibration - particularly linearity calibration. If error persists, balance must be serviced.

9.9  Invalid temperature compensation checksum. Balance will work with default temperature compensation data, however, error will occur each time balance is turned on. Have balance serviced.

**SERVICE INFORMATION**

If the Troubleshooting section does not resolve or describe your problem, you will need to contact an authorized Ohaus Service Agent. For Service assistance in the United States, please call Ohaus Corporation toll-free at (800) 526-0659. An Ohaus Product Service Specialist will be available to help you.

LIMITED WARRANTY

Ohaus products are warranted against defects in materials and workmanship from the date of delivery through the duration of the warranty period. During the warranty period Ohaus will repair, or, at its option, replace any component(s) that proves to be defective at no charge, provided that the product is returned, freight prepaid, to Ohaus.

This warranty does not apply if the product has been damaged by accident or misuse, exposed to radioactive or corrosive materials, has foreign material penetrating to the inside of the product, or as a result of service or modification by other than Ohaus. In lieu of a properly returned warranty registration card, the warranty period shall begin on the date of shipment to the authorized dealer. No other express or implied warranty is given by Ohaus Corporation. Ohaus Corporation shall not be liable for any consequential damages.

As warranty legislation differs from state to state and country to country, please contact Ohaus or your local Ohaus dealer for further details.

For
ANALYTICAL Standard Series
and
PRECISION Standard Balance Series
NOTICE: THIS EQUIPMENT HAS BEEN TESTED AND FOUND TO COMPLY WITH THE LIMITS FOR A CLASS A DIGITAL DEVICE, PURSUANT TO PART 15 OF THE FCC RULES.

THESE LIMITS ARE DESIGNED TO PROVIDE REASONABLE PROTECTION AGAINST HARMFUL INTERFERENCE WHEN THE EQUIPMENT IS OPERATED IN A COMMERCIAL ENVIRONMENT. THIS EQUIPMENT GENERATES, USES, AND CAN RADIATE RADIO FREQUENCY ENERGY AND, IF NOT INSTALLED AND USED IN ACCORDANCE WITH THE INSTRUCTION MANUAL, MAY CAUSE HARMFUL INTERFERENCE TO RADIO COMMUNICATIONS. OPERATION OF THIS EQUIPMENT IN A RESIDENTIAL AREA IS LIKELY TO CAUSE HARMFUL INTERFERENCE IN WHICH CASE THE USER WILL BE REQUIRED TO CORRECT THE INTERFERENCE AT HIS OWN EXPENSE.

THIS DIGITAL APPARATUS DOES NOT EXCEED THE CLASS A LIMITS FOR RADIO NOISE EMISSIONS FROM DIGITAL APPARATUS AS SET OUT IN THE INTERFERENCE-CAUSING EQUIPMENT STANDARD ENTITLED “DIGITAL APPARATUS”, ICES-003 OF THE DEPARTMENT OF COMMUNICATIONS.

CET APPAREIL NUMERIQUE RESPECTE LES LIMITES DE BRUITS RADIOELECTRIQUES APPLICABLES AUX APPAREILS NUMERIQUES DE CLASSE A PRESCRITES DANS LA NORME SUR LE MATÉRIEL BROUILLEUR : “APPAREILS NUMERIQUES”, NMB-003 EDICTÉE PAR LE MINISTÈRE DES COMMUNICATIONS.

Unauthorized changes or modifications to this equipment are not permitted.

INTRODUCTION

The RS232 Interface Accessory is a bidirectional interface which enables either a Precision Standard or an Analytical Standard balance to communicate with a printer or computer equipped with an RS232 serial port. The interface assembly is easily installed in the balance and communication parameters are configured through the balance’s front panel.

INSTALLATION

Use the following procedure to install the RS232 Interface accessory.

CAUTION

TO PREVENT DAMAGE TO THE BALANCE, BE CERTAIN THAT POWER IS DISCONNECTED BEFORE REMOVING THE COVER.

1. Disconnect power to the balance.

2. Remove the draft shield (if installed).

3. Remove the pan and pan support.

4. Using a philips screwdriver, remove the three screws and washers which secure the cover to the balance. The balance will have to be turned over or on its side to access the screws as they are located on the bottom; two under the front panel and one on the rear.

CAUTION

HOLD THE COVER AND BASE TOGETHER WHILE REMOVING SCREWS. DO NOT ALLOW COVER OR BASE TO FALL.
5. Remove the cover.

6. On the rear of the balance, a protective thin plate covers the hole for the 9-pin RS232 connector. Peel off the plate to expose the hole.

7. Place the circuit board and connector assembly in the balance so that the 9-pin connector fits through the hole.

8. Fasten the assembly using the two screws provided.

9. Slide the ribbon connector onto the edge connector of the main circuit board.

10. Replace the cover and fasten the three screws that were removed.

11. Replace the draft shield.

12. Replace the pan and pan support.

13. Reconnect power to the balance.
USING MENUS TO CONFIGURE THE BALANCE

The Analytical Standard and Precision Standard balances both contain four display menus which enable you to calibrate and configure the balance for your specific operating requirements. The print menu shown below is used to configure the RS232 interface.

PRINT MENU

- RESET
- BAUD RATE  
  300, 1200, 2400, 4800, 9600
- DATA BITS  
  7 or 8
- PARITY BIT  
  Odd, Even, None, 1, 0
- STOP BITS  
  1 or 2
- AUTO PRINT  
  continuous, on stability, OFF
- STABLE DATA OUTPUT ONLY  
  ON or OFF
- NUMERIC DATA OUTPUT ONLY  
  ON or OFF
- END
PRINT MENU

When the interface is installed, the Print menu is used to configure the RS232 interface parameters and customize the balance’s print functions for your requirements. The following table shows the sequence in which submenus appear on the Print menu.

**PRINT MENU TABLE**

<table>
<thead>
<tr>
<th>Menu</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Reset</td>
<td>Sets all submenus below to original factory default settings.</td>
</tr>
<tr>
<td>Baud</td>
<td>Specifies baud rate.</td>
</tr>
<tr>
<td>Data</td>
<td>Specifies number of data bits.</td>
</tr>
<tr>
<td>Parity</td>
<td>Specifies parity type, if any.</td>
</tr>
<tr>
<td>Stop</td>
<td>Specifies number of stop bits.</td>
</tr>
<tr>
<td>Auto</td>
<td>Enables/disables Auto print feature.</td>
</tr>
<tr>
<td>Stable</td>
<td>Enables/disables printing stable-data-only feature.</td>
</tr>
<tr>
<td>Nu</td>
<td>Specifies numeric-only or full display data for output.</td>
</tr>
<tr>
<td>End</td>
<td>Used to exit the Print menu and store your selections.</td>
</tr>
</tbody>
</table>

* Does not appear in menu if menu is locked out.

**Print Menu Protection**

The Print menu may be locked out to prevent unauthorized personnel from changing settings. To lock out the print menu, refer to the section titled Menu Lock-Out-Protection.

To access the Print menu press and hold until PRINT is displayed, then release it.

If SAFE is displayed, the Print menu has been locked-out. Settings may be viewed but not changed. See the Menu Lock-Out Protection section to enable it for making changes.
To access a submenu:

1. Repeatedly press \( \text{ON TARE} \) until the desired submenu is displayed.

2. Press \( \text{MODE} \) to select the displayed submenu.

**NOTE:** You must use END to store any changes you make to the Print menu.

The following sections describe each item on the Print menu in detail.

**Reset to Factory Defaults**

This submenu enables you to reset all RS232 menu selections to the original factory default settings outlined in the adjacent table.

To reset to factory defaults:

1. Access the Reset submenu to view the current setting.

2. Press \( \text{OFF MODE} \) to change the setting.

   (Select YES to reset settings or, NO to leave current settings.)

   Press \( \text{ON TARE} \) to accept the displayed setting.

<table>
<thead>
<tr>
<th>Baud rate</th>
<th>br 2400</th>
</tr>
</thead>
<tbody>
<tr>
<td>Data Bits</td>
<td>7 data</td>
</tr>
<tr>
<td>Parity</td>
<td>None</td>
</tr>
<tr>
<td>Stop Bits</td>
<td>2 stop</td>
</tr>
<tr>
<td>Auto Print</td>
<td>OFF</td>
</tr>
<tr>
<td>Stable Data Only</td>
<td>OFF</td>
</tr>
<tr>
<td>Numeric Data Only</td>
<td>OFF</td>
</tr>
</tbody>
</table>
**Baud Rate**

This submenu is used to select the desired baud rate. There are five available baud rates to choose from: 300, 1200, 2400, 4800 and 9600.

To view or change the baud rate:

1. Access the Baud submenu to display the current setting.

2. Press to change the setting.

   Press to accept the displayed setting.

When is released, BAUD will be displayed again and the Print menu will be returned.

**Data Bits**

The total number of bits for Data, Parity and Stop must equal 9 or 10. (see examples). The balance will not permit you to select a combination that does not equal 9 or 10.

To set the number of data bits to 7 or 8:

1. Access the Data submenu to display the current setting.

2. Press to change the setting.

   Press to accept the displayed setting. When is released, DATA will be displayed again and the Print menu will be returned.

**EXAMPLES**

<table>
<thead>
<tr>
<th>EXAMPLES</th>
<th>8 Data + 2 Stop + No Parity</th>
<th>8 Data + 1 Stop + Odd Parity</th>
<th>7 Data + 1 Stop + Odd Parity</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>10</td>
<td>10</td>
<td>9</td>
</tr>
</tbody>
</table>
Parity

Parity can be set to Odd, Even, None, or a marker of 0 or 1 as follows:

1. Access the Parity submenu to display the current setting.
2. Press \( \text{MODE} \) to change the setting.
   Press \( \text{ON TARE} \) to accept the displayed setting.

NOTE: If all selections do not appear, total number of data, parity and stop bits is currently < 8 or > 10. Data or stop bits must be changed.

When \( \text{ON TARE} \) is released, PARITY will be displayed again and the Print menu will be returned.

Stop Bits

The number of stop bits can be set to 1 or 2 as follows:

1. Access the Stop submenu to display the current setting.
2. Press \( \text{MODE} \) to change the setting.
3. Press \( \text{ON TARE} \) to accept the displayed setting.

NOTE: If all selections do not appear, total number of data, parity and stop bits is currently < 8 or > 10. Data or parity bits must be changed.

When \( \text{ON TARE} \) is released, STOP will be displayed again and the Print menu will be returned.
Auto Print Feature

When enabled, the Auto Print feature causes the balance to automatically output display data in one of two ways: continuously, or upon stability.

To select one of these Auto Print methods, or to turn the feature off:

1. Access the AutoP submenu to display the current setting.
2. Press \texttt{Cont} to change the setting.

Press \texttt{On Stb} to accept the displayed setting.

When \texttt{On} is released, AUTOP will be displayed again and the Print menu will be returned.

Print Stable Data Only

When enabled, this feature permits only stable display data to be output. To set the feature ON or OFF:

1. Access the Stable submenu to display the current status.
2. Press \texttt{Off} to change the status.

Press \texttt{Stable} to accept the displayed status.
This submenu is used to select numeric data only, or full display data for RS232 output. Set this feature ON to output numeric display data only, or OFF to output full display data as follows:

1. Access the Nu submenu to display the current status.

2. Press to change the status.

Press to accept the displayed status.

When is released, NU will be displayed again and the Print menu will be returned.

When is released, STABLE will be displayed again and the Print menu will be returned.

You must use END to exit the Print menu. Changes you make in the Print menu are only stored in memory if you use End.

To exit the Print menu and store your selections, press when END is displayed. The balance will be returned to normal weighing operations.
MENU LOCK-OUT PROTECTION

Access to the Print Menu can be disabled using the lock-out switch located under the right side of the balance, near the display.

1. Turn display off and unplug the power cord.

2. Slide the balance toward you, with the front over the edge of a table. (You can also turn the balance on its left side, but if you do, you MUST remove the draft shield, pan and pan support first!)

3. Locate hole under display where switch is located.

4. Using a small screwdriver, slide the switch forward for LOCKED or back for UNLOCKED.

5. Plug in the power cord and turn on the balance.
USING THE INTERFACE

When the interface is installed, a short press on the switch will initiate a print command. Data output is in the format shown under the P command in the RS232 Command Table.

When the interface is connected to a computer, two way communication between the computer and balance is possible using the commands outlined in the RS232 Command Table.

Hardware

The balance can be interfaced with other equipment utilizing the 9-pin subminiature “D” connector. The pinout and pin connections are shown in the adjacent illustration.

The balance will not output any data unless pin 5 (CTS) is held in an ON state (+3 to +15 VDC). Interfaces not utilizing the CTS handshake may tie pin 5 to pin 6 to defeat it.

RS232 Commands

All communication is accomplished using standard ASCII format. Only the characters shown in the following table are acknowledged by the balance. Any other commands, control characters or spaces are ignored.

Commands sent to the balance must be terminated with a carriage return (CR) or carriage return-line line feed (CRLF). For example, a tare command should appear as shown in the adjacent diagram. Data output by the balance is always terminated with a carriage return - line feed (CRLF).

Error Codes

When the RS232 interface is installed in Precision Standard and Analytical Standard balances, the following error codes are added to the standard list of error codes:

4.0  Bad RS232 frame. Check RS232 menu parameters and correct.

4.4  RS232 buffer is full. May occur if no printer or computer is connected to the interface. To clear buffer turn balance off, or enter and exit Print menu and select END.

4.5  Function is disabled by the Lockswitch.

SERVICE INFORMATION

If the Troubleshooting section does not resolve or describe your problem, you will need to contact an authorized Ohaus Service Agent. For Service assistance in the United States, please call Ohaus Corporation toll-free at (800) 526-0659. An Ohaus Product Service Specialist will be available to help you.
LIMITED WARRANTY

Ohaus products are warranted against defects in materials and workmanship from the date of delivery through the duration of the warranty period. During the warranty period Ohaus will repair, or, at its option, replace any component(s) that proves to be defective at no charge, provided that the product is returned, freight prepaid, to Ohaus.

This warranty does not apply if the product has been damaged by accident or misuse, exposed to radioactive or corrosive materials, has foreign material penetrating to the inside of the product, or as a result of service or modification by other than Ohaus. In lieu of a properly returned warranty registration card, the warranty period shall begin on the date of shipment to the authorized dealer. No other express or implied warranty is given by Ohaus Corporation. Ohaus Corporation shall not be liable for any consequential damages.

As warranty legislation differs from state to state and country to country, please contact Ohaus or your local Ohaus dealer for further details.
