Illustrated Symbols

Various symbols are used in this safety manual in order to use the unit without danger of injury and damage of the unit. A list of problems caused by ignoring the warnings and improper handling is divided as shown below. Be sure that you understand the warnings and cautions in this manual before operating the unit.

⚠️ WARNING! If the warning is ignored, there is the danger of a problem that may cause a serious accident or even fatality.

⚠️ CAUTION! If the caution is ignored, there is the danger of a problem that may cause injury/damage to property or the unit itself.

Meaning of Symbols

- ⚠️ This symbol indicates items that urge the warning (including the caution). A detailed warning message is shown adjacent to the symbol.

- 🚫 This symbol indicates items that are strictly prohibited. Do not perform.

- ⚠️ ! This symbol indicates items that should be always performed. A detailed message with instructions is shown adjacent to the symbol.
Cautions in Using with Safety

Table of Illustrated Symbols

**Warning**

- ![Symbol](image1.png)
  - Warning, generally
- ![Symbol](image2.png)
  - Warning, high voltage
- ![Symbol](image3.png)
  - Warning, high temperature
- ![Symbol](image4.png)
  - Warning, drive train
- ![Symbol](image5.png)
  - Warning, explosive

**Caution**

- ![Symbol](image6.png)
  - Caution, generally
- ![Symbol](image7.png)
  - Caution, electrical shock
- ![Symbol](image8.png)
  - Caution, scald
- ![Symbol](image9.png)
  - Caution, no road heating
- ![Symbol](image10.png)
  - Caution, not to drench

- ![Symbol](image11.png)
  - Caution, water only
- ![Symbol](image12.png)
  - Caution, deadly poison

**Prohibit**

- ![Symbol](image13.png)
  - Prohibit, generally
- ![Symbol](image14.png)
  - Prohibit, inflammable
- ![Symbol](image15.png)
  - Prohibit, to disassemble
- ![Symbol](image16.png)
  - Prohibit, to touch

**Compulsion**

- ![Symbol](image17.png)
  - Compulsion, generally
- ![Symbol](image18.png)
  - Compulsion, connect to the grounding terminal
- ![Symbol](image19.png)
  - Compulsion, install on a flat surface
- ![Symbol](image20.png)
  - Compulsion, disconnect the power plug
- ![Symbol](image21.png)
  - Compulsion, periodical inspection
### Fundamental Matters of “WARNING!” and “CAUTION!”

#### **WARNING!**

- **Do not use this unit in an area where there is flammable or explosive gas**

  Never use this unit in an area where there is flammable or explosive gas. This unit is not explosion-proof. An arc may be generated when the power switch is turned on or off, and fire/explosion may result. (Refer to page31 “List of Dangerous Substances”.)

- **Always ground this unit**

  Always ground this unit on the power equipment side in order to avoid electrical shock due to a power surge.

- **If a problem occurs**

  If smoke or strange odor should come out of this unit for some reason, turn off the power key right away, and then turn off the circuit breaker and the main power. Immediately contact a service technician for inspection. If this procedure is not followed, fire or electrical shock may result. Never perform repair work yourself, since it is dangerous and not recommended.

- **Do not use the power cord if it is bundled or tangled**

  Do not use the power cord if it is bundled or tangled. If it is used in this manner, it can overheat and fire may be caused.

- **Do not process, bend, wring, or stretch the power cord forcibly**

  Do not process, bend, wring, or stretch the power cord forcibly. Fire or electrical shock may result.

- **Substances that can not be used**

  Never use explosive substances, flammable substances and substances that include explosive or flammable ingredients in this unit. Explosion or fire may occur.

- **Do not disassemble or modify this unit**

  Do not disassemble or modify this unit. Fire or electrical shock or failure may be caused.

- **Do not touch high-temperature parts**

  The inside of the body or the door may become hot during and just after operation. It may cause burns.

#### **CAUTION!**

- **During a thunder storm**

  During a thunderstorm, turn off the power key immediately, then turn off the circuit breaker and the main power. If this procedure is not followed, fire or electrical shock may be caused.
Before Using this unit

Requirements for Installation

**WARNING!**

1. **Always ground this unit**
   - Connect the power plug to a receptacle with grounding connectors.
   - Do not forget to ground this unit, to protect you and the unit from electrical shock in case of power surge. Choose a receptacle with grounding connectors as often as possible.
   - Do not connect the grounding wire to a gas pipe, or by means of a lightning rod or telephone line. A fire or electrical shock will occur.

2. **Choose a proper place for installation**
   - Do not install this unit in a place where:
     - Rough or dirty surface.
     - Flammable gas or corrosive gas is generated.
     - Ambient temperature exceeds 35°C.
     - Ambient temperature fluctuates violently.
     - There is direct sunlight.
     - There is excessive humidity and dust.
     - There is a constant vibration.
   - Install this unit on a stable place with the space as shown below.

3. **Do not use this unit in an area where there is flammable or explosive gas**
   - Never use this unit in an area where there is flammable or explosive gas. This unit is not explosion-proof. An arc may be generated when the power switch is turned ON or OFF, and fire/explosion may result.
Before Using this unit

Requirements for Installation

4. Do not modify

- Modification of this unit is strictly prohibited. This could cause a failure.

5. Installation on horizontal surface

- Set this unit to the flattest place. Setting this unit on rough or slope place could cause the vibration or noise, or cause the unexpected trouble or malfunction.
6. **Choose a correct power distribution board or receptacle**

- Choose a correct power distribution board or receptacle that meets the unit's rated electric capacity.

  **Electric capacity:**
  - ADP21: 115V AC, 6A
  - ADP31: 115V AC, 10A

  **NOTE**
  There could be the case that the unit does not run even after turning ON the power. Inspect whether the voltage of the main power is lowered than the specified value, or whether other device(s) uses the same power line of this unit. If the phenomena might be found, change the power line of this unit to the other power line.

7. **Handling of power code**

- Do not entangle the power cord. This will cause overheating and possibly a fire.
- Do not bend or twist the power cord, or apply excessive tension to it. This may cause a fire and electrical shock.
- Do not lay the power cord under a desk or chair, and do not allow it to be pinched in order to prevent it from being damaged and to avoid a fire or electrical shock.
- Keep the power cord away from any heating equipment such as a room heater. The cord's insulation may melt and cause a fire or electrical shock.
- If the power cord becomes damaged (wiring exposed, breakage, etc.), immediately turn off the power at the rear of this unit and shut off the main supply power. Then contact your nearest dealer for replacement of the power cord. Leaving it may cause a fire or electrical shock.
- Connect the power plug to the receptacle which is supplied appropriate power and voltage.

8. **Before/after installing**

- It may cause injure to a person if this unit falls down or moves by the earthquake and the impact. etc.. To prevent, take measures that the unit cannot fall down, and not install to busy place.
- Touching the unit may cause a burn during and just after the operation. To prevent, take measures that putting up a notice of operating etc.
Description and Function of Each Part

Main Unit

**Front view**

- Purge valve
- Vacuum valve
- Door
- Inspection window
- Vacuum meter
- Control panel
- Power switch

**Rear view**

- Power cord
Control Panel

1. START/STOP Key: Starts/stops the operation.
2. ▲▼ Key: Uses for rising UP/lowering DOWN the setting value.
3. ENTER Key: Sets the inputted value.
4. FIXED TEMP Key: Chooses the fixed temperature operation.
5. TIMER Key: Chooses the timer operation (Quick Auto Stop/Auto Stop/Auto Start).
6. SUBMENU Key: Uses for setting the overheating prevention temperature, calibration offset temperature, and key lock function.
7. HEATER Lamp: Lights while the heater works.
8. ALARM Lamp: Lights up when an error occurs. (Buzzer sounds simultaneously.)
9. AUTO STOP Lamp: Blinks while setting quick auto stop timer or auto stop timer.
Light while quick auto stop timer or auto stop timer is running.
10. AUTO START Lamp: Blinks while setting auto start timer.
   Lights while auto start timer is running.
11. FIXED TEMP Lamp: Blinks while setting fixed temperature operation.
   Lights while fixed temperature operation is running.
12. Measurement Temperature Display: Displays the measured temperature, setting character, alarm information.
13. Setting Temperature Display: Displays the setting temperature, setting value for timer mode, remaining time.
15. Power Switch: Turns ON/OFF the main power.
## Description and Function of Each Part

### Characters of Thermo Controller

The characters VS3 controller shows are as follows:

<table>
<thead>
<tr>
<th>Character</th>
<th>Identifier</th>
<th>Name</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>FiX</td>
<td></td>
<td>Fixed Temperature Setting Mode</td>
<td>Used for starting the fixed temperature operation.</td>
</tr>
<tr>
<td>Sv</td>
<td></td>
<td>Temperature Setting</td>
<td>Used for setting the temperature.</td>
</tr>
<tr>
<td>AStP</td>
<td></td>
<td>Timer Setting Mode Display</td>
<td>Represents the setting of quick auto stop or auto stop operation.</td>
</tr>
<tr>
<td>AStr</td>
<td></td>
<td>Timer Setting Mode Display</td>
<td>Represents the setting of auto start operation.</td>
</tr>
<tr>
<td>tim</td>
<td></td>
<td>Time Setting</td>
<td>Used for setting the time.</td>
</tr>
<tr>
<td>End</td>
<td></td>
<td>Time Up</td>
<td>Displays when the timer operation is completed.</td>
</tr>
<tr>
<td>cAL</td>
<td></td>
<td>Calibration Offset Setting</td>
<td>Used for inputting the calibration offset temperature. (Refer to Page 21 &quot;Use calibration offset function&quot;).</td>
</tr>
<tr>
<td>oH</td>
<td></td>
<td>Overheating Prevention Setting</td>
<td>Used for setting temperature for overheating prevention device. (Refer to Page 14 &quot;Setting of Overheating Prevention Device&quot;).</td>
</tr>
<tr>
<td>LocK</td>
<td></td>
<td>Key Lock</td>
<td>Locks the keys on control panel to protect from unnecessary operation. (Refer to Page 21 &quot;Use lock function&quot;).</td>
</tr>
</tbody>
</table>

* Also refer to Page 14 "Setting of Overheating Prevention Device".
**Operation Method**

**Preparation for Operation**

**Set the shelf:** Use the shelf of attached accessory. Permissible load of the shelf is approximately 15kg. Do not put too much sample.

**Set sample:** Set samples with space between each of them. Make room more than 30% of the shelf in order to keep accuracy of temperature.

**Connect the power code:** Connect the power code to a proper receptacle securely.

---

**Read the following without fail before using the vacuum pump**

- Use a vacuum pump with air volume displacement of approximately 50 liters/min.

- The vacuum pump shall be connected to the main unit before starting operation. Check no vacuum air leakage exists before turning on the power of this unit.

**Make bath to vacuum state:** Close the purging valve to vacuum the bath. Turn on the power switch of vacuum pump after opening the vacuum valve. After the power switch of vacuum pump is turned on, the scale at the front of the unit gradually slants to the left until it reaches to approximately 100 Pa. Vacuuming time is around seven minutes for ADP21 and around ten minutes for ADP31 under an ambient temperature.

**Return bath to atmospheric pressure:** Close the vacuum valve and open the purge valve.

- Turn off the power switch of the vacuum pump after returning the inlet side of pump to atmospheric pressure. If not, oil inside the pump may flow back to the bath.

- When using powder-type sample, open the purging valve gradually to avoid powder flying.
# Operation Mode and Function List

All the operation mode of this unit is as follows;

<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>
<th>Description</th>
<th>Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>1.</td>
<td>Fixed Temperature Operation</td>
<td>Pressing the FIXED TEMP key enters into the fixed temperature operation setting mode. Pressing it again enters into the temperature setting mode. The &quot;▲▼&quot; are used to set temperature. Pressing the START/STOP key starts or stops operation.</td>
<td>15</td>
</tr>
<tr>
<td>2.</td>
<td>Quick Auto Stop Operation</td>
<td>This operation is used to specify the period up to automatic stop during operation. The period up to operation stop can be set by pressing the TIMER key during fixed temperature operation. The &quot;▲▼&quot; are used to set the time. Pressing the START key starts the quick auto stop operation, activates the timer function and stops the operation automatically after specified period.</td>
<td>16</td>
</tr>
<tr>
<td>3.</td>
<td>Auto Stop Operation</td>
<td>This operation is used to specify the automatic stop time in the fixed temperature operation. Pressing the TIMER key displays &quot;AS tp&quot;. The setting temperature &quot;SV&quot; can be set by pressing the ENTER key. The operation time &quot;tim&quot; can be set by pressing it again. Pressing the START/STOP key starts the auto stop operation.</td>
<td>17</td>
</tr>
<tr>
<td>4.</td>
<td>Auto Start Operation</td>
<td>This operation is used to specify the period up to automatic start after power on. Pressing the TIMER key displays &quot;AS tr&quot;. The setting temperature &quot;SV&quot; can be set by pressing the ENTER key. The operation time &quot;tim&quot; can be set by pressing it again. Pressing the START/STOP key starts the auto start operation.</td>
<td>19</td>
</tr>
</tbody>
</table>

**NOTE** This unit is impossible to be changed the mode during the operation. If the mode requires to be changed, stop the operation.
The operation function of this unit is as follows;

<table>
<thead>
<tr>
<th>No.</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1.  | Overheating prevention function         | Auto overheating prevention function  
Overheating prevention device  
This function is set to be automatically activated (auto reset) when the temperature exceeds the setting temperature by 12°C. |
| 2.  | Calibration offset function             | This calibration offset function is for calibrating the difference occurred between the required in-furnace temperature and control temperature (sensor temperature) of the controller. This unit can be calibrated toward either plus side or minus side of the whole temperature range. |
| 3.  | Overheating prevention temperature calibration function | The temperature of overheating prevention device is automatically corrected when the temperature of controller is collected.                                                                                     |
| 4.  | Recovery at power failure               | The unit starts operation with the same condition as just before power failure if it occurs during operation. Press the START/STOP key to start the unit again.                                             |
| 5.  | Setting value locking                   | This function locks the established operation status. It can be set and cancelled with the SUBMENU key.                                                                                                     |
The operation mode setting and function setting use the key operation and characters show in the following figure.
Setting of Overheating Prevention Device

The unit has the overheating prevention device (manual reset) that consists of independent temperature measurement circuit, CPU, sensor and output circuit (it shares power source, display, and key input with the controller) in addition to the automatic overheating prevention function (auto reset) in the controller.

Setting range/function

The unit has failsafe functions against overheating. One of them is built in the controller and previously set at factory shipment so to be automatically activated when the temperature exceeds the setting temperature of temperature controller by 12°C, where the heater repeats on and off.

The other is united with the controller, which can be set by operating the keys on the controller.

The setting range of latter is from 0°C to 1300°C.

In case the temperature in furnace exceeds the setting temperature of controller to reach to that of overheating prevention device, the circuit is shut off and "Er19" is displayed with blinking on the screen of controller with buzzer sound.

If the device is once activated, "Er19" continues to be displayed until the power is newly turned on.

Temperature setting procedure

1. Turn on the power (turn on the breaker in front)
   - The default value is displayed for about four seconds after turning on the power. The screen then displays the initial setting. The current temperature in furnace, operation mode character and setting temperature of overheating prevention device are displayed on respective screens.

2. Set the temperature for overheating prevention
   ① Press the SUBMENU key.
   ② Press the "▼▲" several times to select the setting character of overheating prevention temperature "OH".
   ③ Press the ENTER key. The current setting temperature is displayed with blinking on the setting temperature screen.

   **Note:** To prevent improper operation, set the value 12°C or more over the setting temperature of controller.

   ④ Select the value using the "▼▲" and then press the ENTER key. This completes the setting.

Notes:

- The standard setting temperature of device is "the maximum setting temperature of unit plus 12°C" or "setting temperature plus 12°C".
- The setting range of overheating prevention device is from 0°C to 1300°C. Improper setting of temperature may cause inoperative of unit, malfunction of device, e.g. it is activated during increasing in temperature in furnace, or unexpected accidents such as fire disaster.

To prevent such matters, set a proper value.

- **The temperature is set at 252°C for the ADP21 and ADP31 at factory shipment.**
- In some case, the overheating prevention device is possible to be activated by mistake when its yield temperature is set to around room temperature.
- The purpose of overheating prevention device is to protect the unit from overheating. It does not intend to protect the samples, or to protect them from the accident caused by the use of explosive or inflammability.
Fixed Temperature Operation

Fixed temperature operation procedure

1. Turn on the power (turn on the breaker in front)
   - The default value is displayed for about four seconds after turning on the power. The screen then displays the initial setting. The current temperature in furnace, operation mode character and setting temperature of overheating prevention device are displayed on respective screens.

2. Select the operation mode
   - Press the FIXED TEMP key to display "FIX", which indicates the fixed temperature operation, on the center display screen.

3. Set the temperature
   - Press the FIXED TEMP key again.
   - The setting temperature screen displays the character "SV" which indicates the temperature setting. Also it displays the current setting temperature with blinking. The FIXED TEMP lamp blinks, too.
   - Set the temperature by pressing the "▼▲".

4. Start operation
   - Press the orange START/STOP key for about one second. The unit starts operation and the blinking FIXED TEMP lamp lights on.

5. Stop operation
   - Press the orange START/STOP key for about one second. The unit stops operation and the FIXED TEMP lamp lights off. The screen returns to the initial setting screen.

To correct or check setting...
Press the FIXED TEMP key again to correct or check the setting.
Changing the setting temperature during operation is also possible by pressing the FIXED TEMP key.
Quick Auto Stop Operation

Quick auto stop operation procedure

This operation is used to specify the period up to automatic stop, i.e., sets the auto stop timer during operation.

1. Set the time up to stop during fixed temperature operation

- Check that the FIXED TEMP lamp lights on and that the unit is under operation.
- Press the TIMER key.
- The measurement temperature display screen displays the character "tim", which indicates the timer setting. The setting temperature display screen displays the current setting time with blinking.
- Select the time by pressing the "▼▲".

Timer function:

- The maximum setting time is "999 hours and 50 minutes".
- The time can be set in increments of a minute under 99 hours and 59 minutes.
- It can be set in increment of ten minutes over 100 hours.
- The "▼▲" can change the setting time quickly when it is pressed continuously. Press them discontinuously when fine adjustment is needed.

2. Start timer operation

- Press the START/STOP key for one second after deciding the time.
- Timer operation starts with the FIXED TEMP and AUTO STOP lamps lighting on.
- The timer is activated at the point when the START/STOP key is pressed.

3. Stop/terminate timer operation

- The operation stops automatically at setting time.
- Buzzer continues to sound for about five seconds at operation stop.
- The setting temperature screen displays the character "End", which indicates termination of operation, with the FIXED TEMP and AUTO STOP lamps lighting on. Press the START/STOP key to terminate the timer operation mode. The screen returns to the initial setting screen.

To correct or check setting...

Changing the setting temperature during operation is possible by pressing the FIXED TEMP key. Press the ENTER key after changing the setting.

Changing the setting temperature during operation is available by pressing the FIXED TEMP key. Press the ENTER key after changing the setting.

Press the ▼ key to display the setting temperature, operation mode and residual time on the setting temperature screen.
Auto Stop Operation

1. Set stop time

① Press the TIMER key on the initial screen. Press the TIMER key again. The setting temperature display screen displays the character "AstP", which indicates the auto stop operation, with blinking.

② Press the ENTER key. The measurement temperature screen displays the character "SV", which indicates the temperature setting. The setting temperature screen displays the current setting temperature with blinking. The AUTO STOP lamp blinks, too.

③ Set the temperature using the "▼▲".

④ Press the ENTER key again. The measurement temperature display screen displays the character "tim", which indicates the timer setting. The setting temperature display screen displays the current setting time with blinking.

⑤ Set the time using the "▼▲".

Timer function:

- The maximum setting time is "999 hours and 50 minutes".
- The time can be set in increments of a minute under 99 hours and 59 minutes.
- It can be set in increment of ten minutes over 100 hours.
- The "▼▲" can change the setting time quickly when it is pressed continuously. Press them discontinuously when fine adjustment is needed.

2. Start timer operation

- Press the START/STOP key for one second after deciding the time.
- Timer operation starts with the AUTO STOP lamp lighting on.
- The timer is activated at the point when the temperature in furnace (measurement temperature) reaches to the setting temperature.
Auto Stop Operation

3. Stop/terminate timer operation

- The operation stops automatically at setting time.
- Buzzer continues to sound for about five seconds at operation stop.
- The setting temperature screen displays the character "End", which indicates termination of operation, with the FIXED TEMP and AUTO STOP lamps lighting on. Press the START/STOP key to terminate the timer operation mode. The screen returns to the initial setting screen.

To correct or check setting...

Changing the setting temperature or time during operation is possible by pressing the TIMER key. Use the "▼▲" to change the setting value. Press the ENTER key respectively after changing the setting.

Press the "▼" to display the setting temperature, operation mode and residual time on the setting temperature screen.
Auto Start Operation

Auto start operation procedure

This operation is used to specify the period up to automatic start after power on.

1. Set start time
   ① Press the TIMER key on the initial screen.
      Press the TIMER key again. The setting temperature display screen displays the character "Astr", which indicates the auto start operation, with blinking.
   ② Press the ENTER key.
      The measurement temperature screen displays the character "SV", which indicates the temperature setting. The setting temperature screen displays the current setting temperature with blinking. The AUTO START lamp blinks, too.
   ③ Set the temperature using the "▼▲".
   ④ Press the ENTER key again.
      The measurement temperature display screen displays the character "tim", which indicates the timer setting. The setting temperature display screen displays the current setting time with blinking.
   ⑤ Set the time using the "▼▲".

Timer function:
- The maximum setting time is "999 hours and 50 minutes".
- The time can be set in increments of a minute under 99 hours and 59 minutes.
- It can be set in increment of ten minutes over 100 hours.
- The "▼▲" can change the setting time quickly when it is pressed continuously. Press them discontinuously when fine adjustment is needed.

2. Start timer operation
   - Press the START/STOP key for one second after deciding the time.
   - Timer operation starts with the AUTO START lamp lighting on.
Auto Start Operation

3. Stop/terminate timer operation
- The operation starts automatically at setting time.
- Press the START/STOP key for one second to stop or terminate operation. The screen returns to the initial setting screen.

To correct or check setting...
Changing the setting temperature or time during operation is possible by pressing the TIMER key. Use the "▼▲" to change the setting value. Press the ENTER key respectively after changing the setting. They are not changeable after the unit starts operation. In this case, stop the operation by pressing the START/STOP key, then set the value again.
Press the "▼" to display the setting temperature, operation mode and residual time on the setting temperature screen.
Operation Method

Other Functions

Use calibration offset function

Calibration offset is a function which corrects the difference between the temperature in furnace and that of controller (sensor temperature) if arises. The function parallel corrects the difference either to the plus or minus side within the whole temperature range of unit. The function can be set or cancelled by the SUBMENU key.

1. Start operation with the target setting temperature. Check the temperature in furnace (temperature of sample) with a thermograph after it is stabilized.
2. Check the difference between the setting temperature and that in furnace (temperature of sample).
3. Press the SUBMENU key. Select the character "cAL", which indicates the calibration offset, using the "▲▼", and then press the ENTER key.
4. Input the difference using the "▲▼" and then press the ENTER key. This completes the setting.
   - The setting range of offset correction temperature is +99°C to plus side and -99°C to minus side respectively.
   - When it is set to the minus side, the temperature on the measurement temperature display screen falls by the setting temperature, while the temperature on furnace rises.
   - When it is set to the minus side, the temperature on the measurement temperature display screen rises by the setting temperature, while the temperature on furnace falls.
   - The unit has two-point correction function, which performs offset between low-temperature zone and high-temperature zone. Please consult our local branch office when carrying out validation of temperature controller.

Use lock function

This function locks the operation status previously set. The function can be set or cancelled by the SUBMENU key.

1. Press the SUBMENU key. Select the character "Lock", which indicates the lock of setting value, using the "▲▼", and then press the ENTER key.
2. The setting temperature screen displays "oFF". The setting value is locked when it is turned to "o n" using the "▲".
3. Press the SUBMENU key again to cancel the lock. Select the character "Lock", which indicates the lock of setting value, using the "▲▼", and then press the ENTER key. Select "oFF" with the "▼" and then press the ENTER key to cancel the function.
   - All keys other than the START/STOP and SUBMENU keys are lock when the lock function is on.

**Handling Precautions**

**WARNING!**

If a problem occurs

警告：如果出现异常情况，须马上断开电路，并通知技术人员进行检查。

---

**CAUTION!**

Substances that cannot be used

警告：不要使用易燃品，易爆品和含有易燃或易爆成分的物质。否则可能导致爆炸或火灾。

---

Do not step on this unit

警告：不要踩踏本机，否则会造成危险。

Do not put anything on this unit

警告：不要在上面放置物品，否则会摔落。

During a thunder storm

警告：雷雨期间，应立即断开电路。

Do not touch high-temperature parts

警告：高温部位可能会烫伤。

Sample loading

警告：过载会导致温度控制失灵，不要过载。

Return after power failure

警告：由于电源恢复，设备会自动启动，可能会导致危险。
Daily Inspection and Maintenance

For the safety use of this unit, please perform the daily inspection and maintenance without fail. Using the city water to this unit might attach dirt. Do inspect and maintain this point while performing daily inspection and maintenance.

⚠️ WARNING!

- Disconnect the power cable from the power source when doing an inspection or maintenance unless needed.
- Perform the daily inspection and maintenance after returning the temperature of this unit to the normal one.
- Do not disassemble this unit.

⚠️ CAUTION!

- Use a well-drained soft cloth to wipe dirt on this unit. Do not use benzene, thinner or cleanser for wiping. Do not scrub this unit. Deformation, deterioration or color change may result in.

For any questions, contact Yamato Service Office.
Long storage and disposal

When not using this unit for long term / When disposing

⚠️ CAUTION!
When not using this unit for long term…
- Turn off the power and disconnect the power cord.

⚠️ WARNING!
When disposing…
- Keep out of reach of children.
- Remove the door and driving parts.
- Treat as large trash.

Environmental protection should be considered
We request you to disassemble this unit as possible and recycle the reusable parts considering to the environmental protection. The feature components of this unit and materials used are listed below.

Safety Device and Error Code

This unit has an automatic diagnosis function built in the controller and safety devices independent of the controller. The table below shows the cause and the solution method when the safety device operates.

Error Code:

When an abnormal condition occurs, an error code appears and the alarm lamp lights in the controller, the buzzer sounds simultaneously. Record the error code and turn off the power of device immediately.

<table>
<thead>
<tr>
<th>Safety Device</th>

### Trouble Shooting

**Before call us...**

<table>
<thead>
<tr>
<th>Condition</th>
<th>Possible Causes</th>
</tr>
</thead>
<tbody>
<tr>
<td>The device does not start when turning on the power switch.</td>
<td>• Power plug is not connected to the receptacle correctly.</td>
</tr>
<tr>
<td></td>
<td>• Power failure.</td>
</tr>
<tr>
<td>Temperature fluctuates during the operation.</td>
<td>• Too much samples.</td>
</tr>
<tr>
<td></td>
<td>• Wind from air conditioner directly blows.</td>
</tr>
<tr>
<td></td>
<td>• The change of ambient temperature is remarkable.</td>
</tr>
<tr>
<td></td>
<td>• Samples are too moist.</td>
</tr>
<tr>
<td></td>
<td>• The power supply voltage is lower than the proper value.</td>
</tr>
</tbody>
</table>

In the case if the error other than listed above occurred, turn off the power switch and primary power source immediately. Contact the shop of your purchase or Yamato Service Office.
After Service and Warranty

In Case of Request for Repair

If the failure occurs, stop the operation, turn OFF the power switch, and unplug the power plug. Please contact the sales agency that this unit was purchased, or Yamato sales office.

◆ Model Name of Product
◆ Production Number
◆ Purchase Date
◆ About Trouble (in detail as possible)

Minimum Retention Period of Performance Parts for Repair

The minimum retention period of performance parts for repair of this unit is 5 years after discontinuance of this unit.

The "performance part for repair" is the part that is required to maintain this unit.
