Comment on the draft version of NIST CSF v1.1

You guys are still listing the Critical Security Controls v5.

That is no longer the current version and the group that managed it, The Council for Cybersecurity (CCS) no longer exists.

The Center for Internet Security (CIS) now manages the CSC and its now version 6. Please update all the references to CSC to this new version. I see you did that in a couple of places, but left all the old CSC references in.

Also, please add crosswalk from the NIST CSF core to HIPAA and PCI as appendixes to the CSF v1.1 document.

thanks

Michael Brown
