

Hello,

I want to provide my agency's comments about the needed updates:

1. "Information System Security Office" (ISSO) is not defined separate in the framework and KSAs need to be required for this rolw. Currently the ISSOs are using the "Information System Security Manager" role but this should not be the case.
2. "Information System Owner" is referenced in several places as a security manager, but there is no detailed description for the role (i.e. KSAs required). It should not be considered the same thing as a "Information System Security Manager."

Regards,

Hanan AbuLebdeh, CISSP|CISM  
System Security Branch Chief
