|  Homeland Security Science and Technology | INTERNATIONAL FACE PERFORMANCE CONFERENCE Supporting Performance of Face Recognition |  |
|  | October 27-29, 2020 DRAFT PROGRAM |  |

NIST, NPL and the EAB are happy to announce the agenda for the IFPC 2020 conference on performance of face recognition which is focused on all technical factors affecting the deployment and use of high performance face recognition applications, including applications, standards, advanced and rapid capture, quality assessment, age and ageing effects, demographic effects, datasets, their preparation, training and tuning, presentation attack detection, non-cooperative uses, accuracy measurement, and performance tests.

Sponsored by the Department of Homeland Security’s Science and Technology Directorate, the conference aims to assemble a set of speakers from across the globe involved in face recognition development, procurement, deployment and operations. The overarching goal is to bring greater maturity to face recognition by improving performance, transparency, and trustworthiness. The organizers welcome proposals for technical or policy presentations focused on any technical factors, problems, and mitigations that influence face recognition operations and applications.

Organizers:

Patrick Grother, Mei Ngan, NIST, US
Christoph Busch, EAB, DE
Tony Mansfield, NPL, UK

Speakers:

Research and development staff, system analysts, users, evaluators, planners, writers of technical specifications, standards developers and adopters.

Target audience:

Professionals concerned with face recognition procurement, deployment, maintenance, design, configuration, integration, standardization, research and development.
