OSAC RESEARCH NEEDS ASSESSMENT FORM

Title of research need: Study to Assess the Accuracy and Reliability of Firearm and Toolmark Examinations

Keyword(s): black box, toolmarks, validation, firearms, forensic science, error rate

Submitting subcommittee(s): Firearms & Toolmarks Date Approved: March 5, 2021

(If SAC review identifies additional subcommittees, add them to the box above.)

Background Information:

1. Does this research need address a gap(s) in a current or planned standard? (ex.: Field identification system for on scene opioid detection and confirmation)

   Studies designed to assess examiner accuracy and reliability in source attribution-type conclusions (i.e. error rate studies).

2. Are you aware of any ongoing research that may address this research need that has not yet been published (e.g., research presented in conference proceedings, studies that you or a colleague have participated in but have yet to be published)?

   Unknown

4. Review the annual operational/research needs published by the National Institute of Justice (NIJ) at https://nij.ojp.gov/topics/articles/forensic-science-research-and-development-technology-working-group-operational#latest? Is your research need identified by NIJ?

   Yes, “Determination of accuracy and reliability of forensic analyses and conclusions, including potential sources of error”.

5. In what ways would the research results improve current laboratory capabilities?

   Error rate studies have the potential to provide laboratories with information on what types of errors occur, the frequency of errors and why they may occur. This can help shape laboratory quality programs in order to help mitigate errors.
6. In what ways would the research results improve understanding of the scientific basis for the subcommittee(s)?

Numerous studies have been performed, however additional studies with different designs will continue to provide the subcommittee with knowledge about errors. This data will help guide our work product regarding analytical, documentation and case review standards.

7. In what ways would the research results improve services to the criminal justice system?

This research would provide additional data to help the justice system assess the overall error rate of the firearm and toolmark discipline and fulfill one the Daubert criteria (error rate).

8. Status assessment (I, II, III, or IV):
