

## **FRP Composite Materials Announcement**

The Reliability of FRP Composite Materials project plans to conduct research that utilizes relevant and representative FRP composite materials used on buildings and infrastructure systems across the United States. If interested in providing materials for this study through a Materials Transfer Agreement, or for further information, please contact David Goodwin at [david.goodwin@nist.gov](mailto:david.goodwin@nist.gov) before July 31, 2021. Use of the materials is contingent upon project goals, the availability of internal resources, relevance of the materials to retrofits used nationally in practice, and a Materials Transfer Agreement approved and signed by both NIST and the materials provider.
