SUBJECT: Upcoming Mobile ID Work Group Meeting

The NIST Mobile ID work group was formed as a result of the NIST Mobile ID workshop held last September. The next meeting has been scheduled for March 5-6, 2008 at NIST to continue the development of a minimum set of operational requirements for enrollment, identification, and verification functions using Mobile ID devices.

During the November 29th meeting of the group, consensus was reached on various parameters for some basic levels of operation for fingerprint capture and transmission. At the March meeting the documentation of this work will be reviewed. Additional topics including image compression, record types to be used, and responses to be generated will also be discussed. As time permits, aspects relating to face and iris capture will be considered. Any issues or aspects of Mobile ID that you would like to have discussed during the meeting and placed on the agenda should be forwarded to me as soon as possible.
