Standards and Performance Metrics  
for On-Road Automated Vehicles  
Workshop  
Sept 5, 2023

# The Operational Domain and the Human Driver as the Baseline for AV Metrics

David Agnew  
VP AV Business Development  
[dagnew@dataspeedinc.com](mailto:dagnew@dataspeedinc.com)

# Periods of Violent Deaths in the U.S. (deaths/day)

# Periods of Violent Deaths in the U.S.

(deaths/day)

Commercial Aviation x 10

# Periods of Violent Deaths in the U.S.

(deaths/day)

# Autonomous Vehicle Performance Metrics

- There is a need for effectively measuring AV performance
- A highly significant aspect of driving is crashes and fatalities
- Benchmarking AV to human safety performance provides starting point

## Not addressing here:

- Travel performance (speed)
- Comfort performance

# The Human Driver Causes 94% of All Crashes (NHTSA)

## What metric is used for measuring performance?

One Year in U.S. (2022)\*:

-Humans drove 3.12 trillion miles

-42,795 fatalities occurred

73 million miles / fatality

\*NHTSA

# The Human Driver Causes 94% of All Crashes (NHTSA)

## What metric is used for measuring performance?

One Year in U.S. (2022)\*:

-Humans drove 3.12 trillion miles

-42,795 fatalities occurred

73 million miles / fatality

**million-miles/fatality or fatalities/million-miles**

\*NHTSA

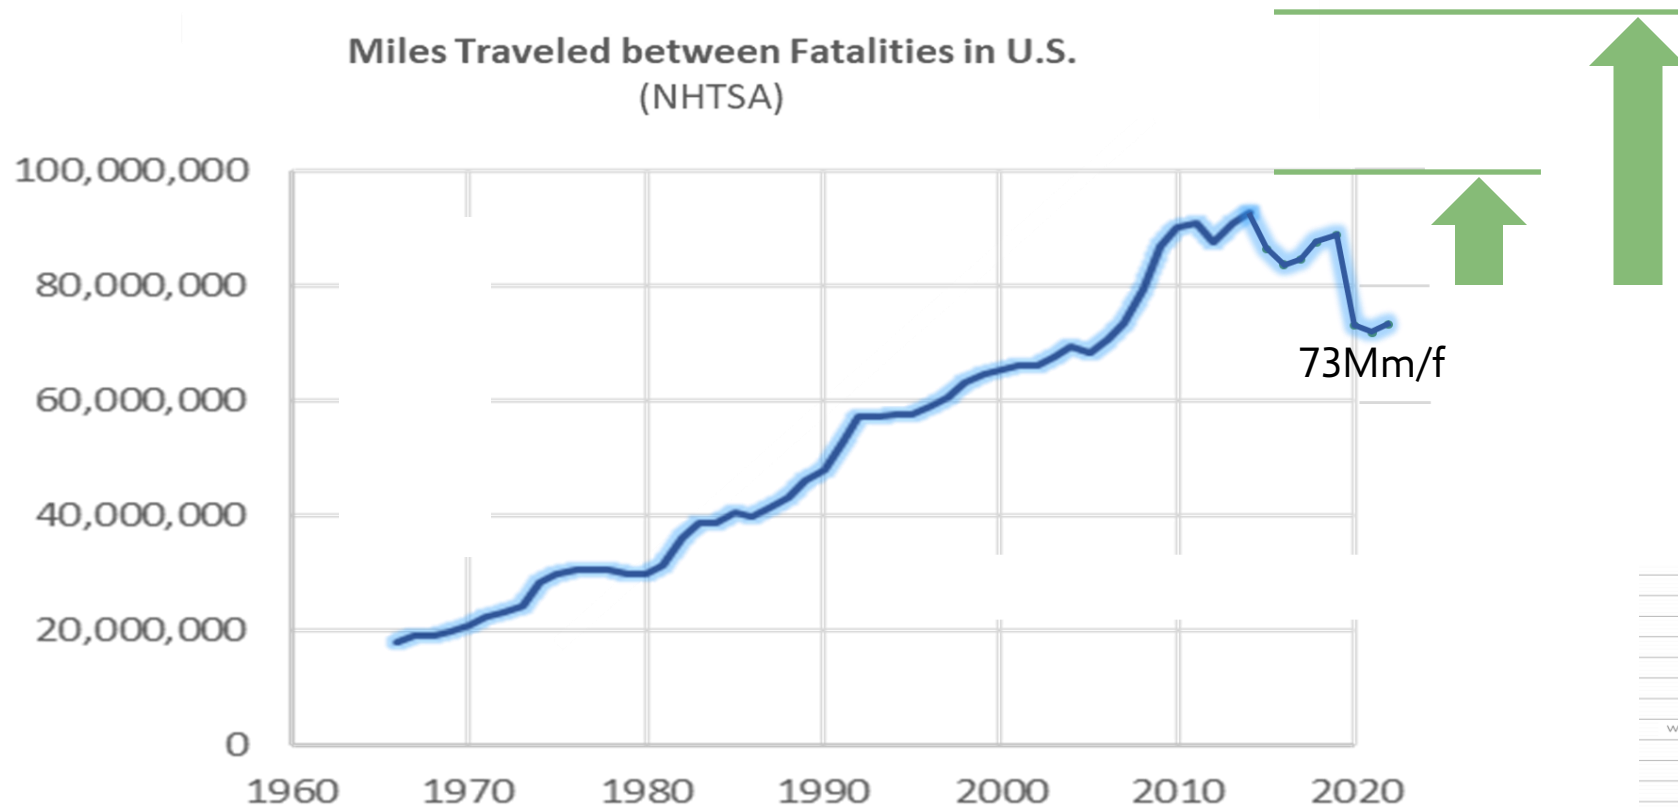

# This Metric Changes from Year to Year

From NHTSA data

# What is the Target for AV's?

AV Capability?

equal or better than human?

# AV Safety Performance Expectations

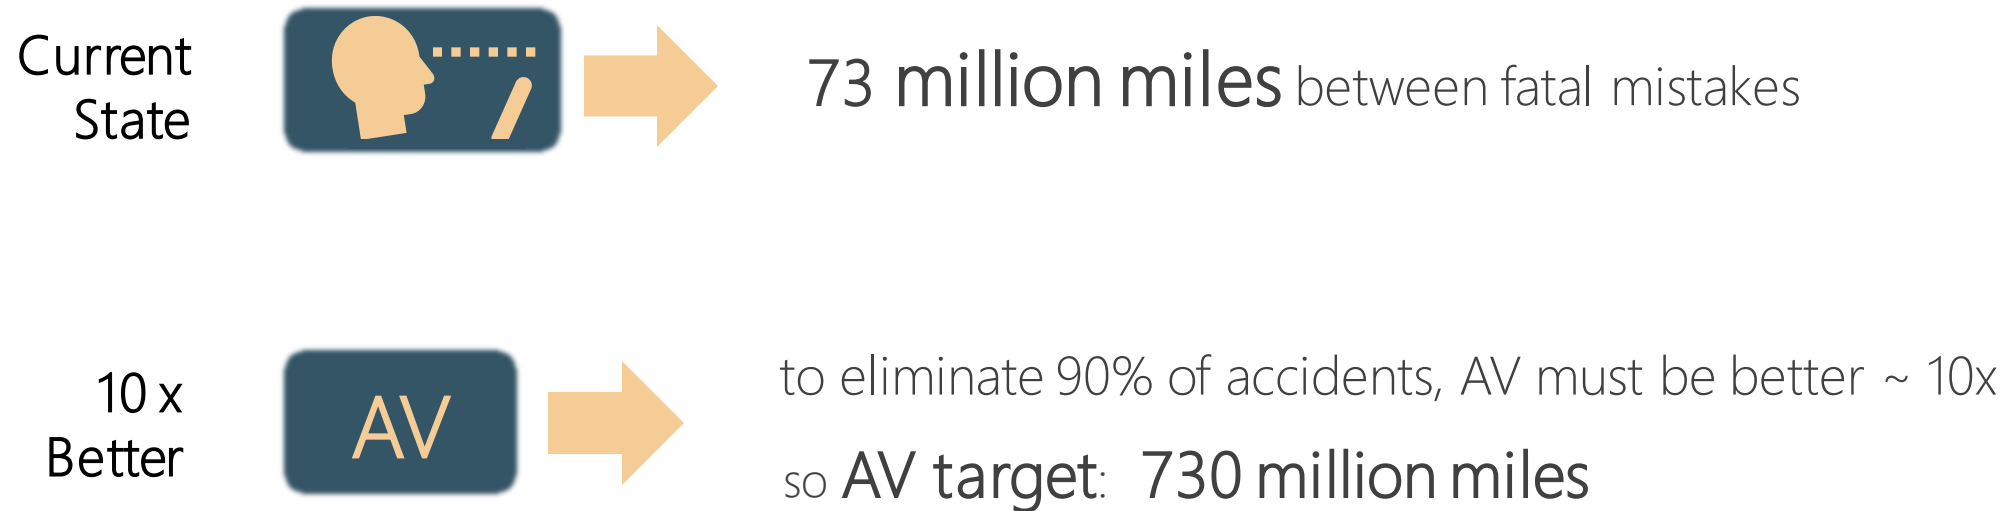

## One Approach

Current State  → 73 million miles between fatal mistakes

10 x Better  → to eliminate 90% of accidents, AV must be better ~ 10x  
so AV target: 730 million miles

# AV Safety Performance Expectations

## One Approach

But the conditions and the scope of the driving matters ...

# Operational Domain for the Driving Situation

## The Conditions and the Scope of Performance Metric

- All U.S. roadways
- All driver ages
- All Times of Day
- All driver behaviors
  - Aggressive
  - Drunk
  - Drowsy

What if you are a 47yr-old driver only drive in Wisconsin?

# Operational Domain: Region or State where Driving

U.S.  73 million miles / fatality

Wisc.  105 million miles / fatality

*For one from Wisconsin, a US based target falls short by 44%*

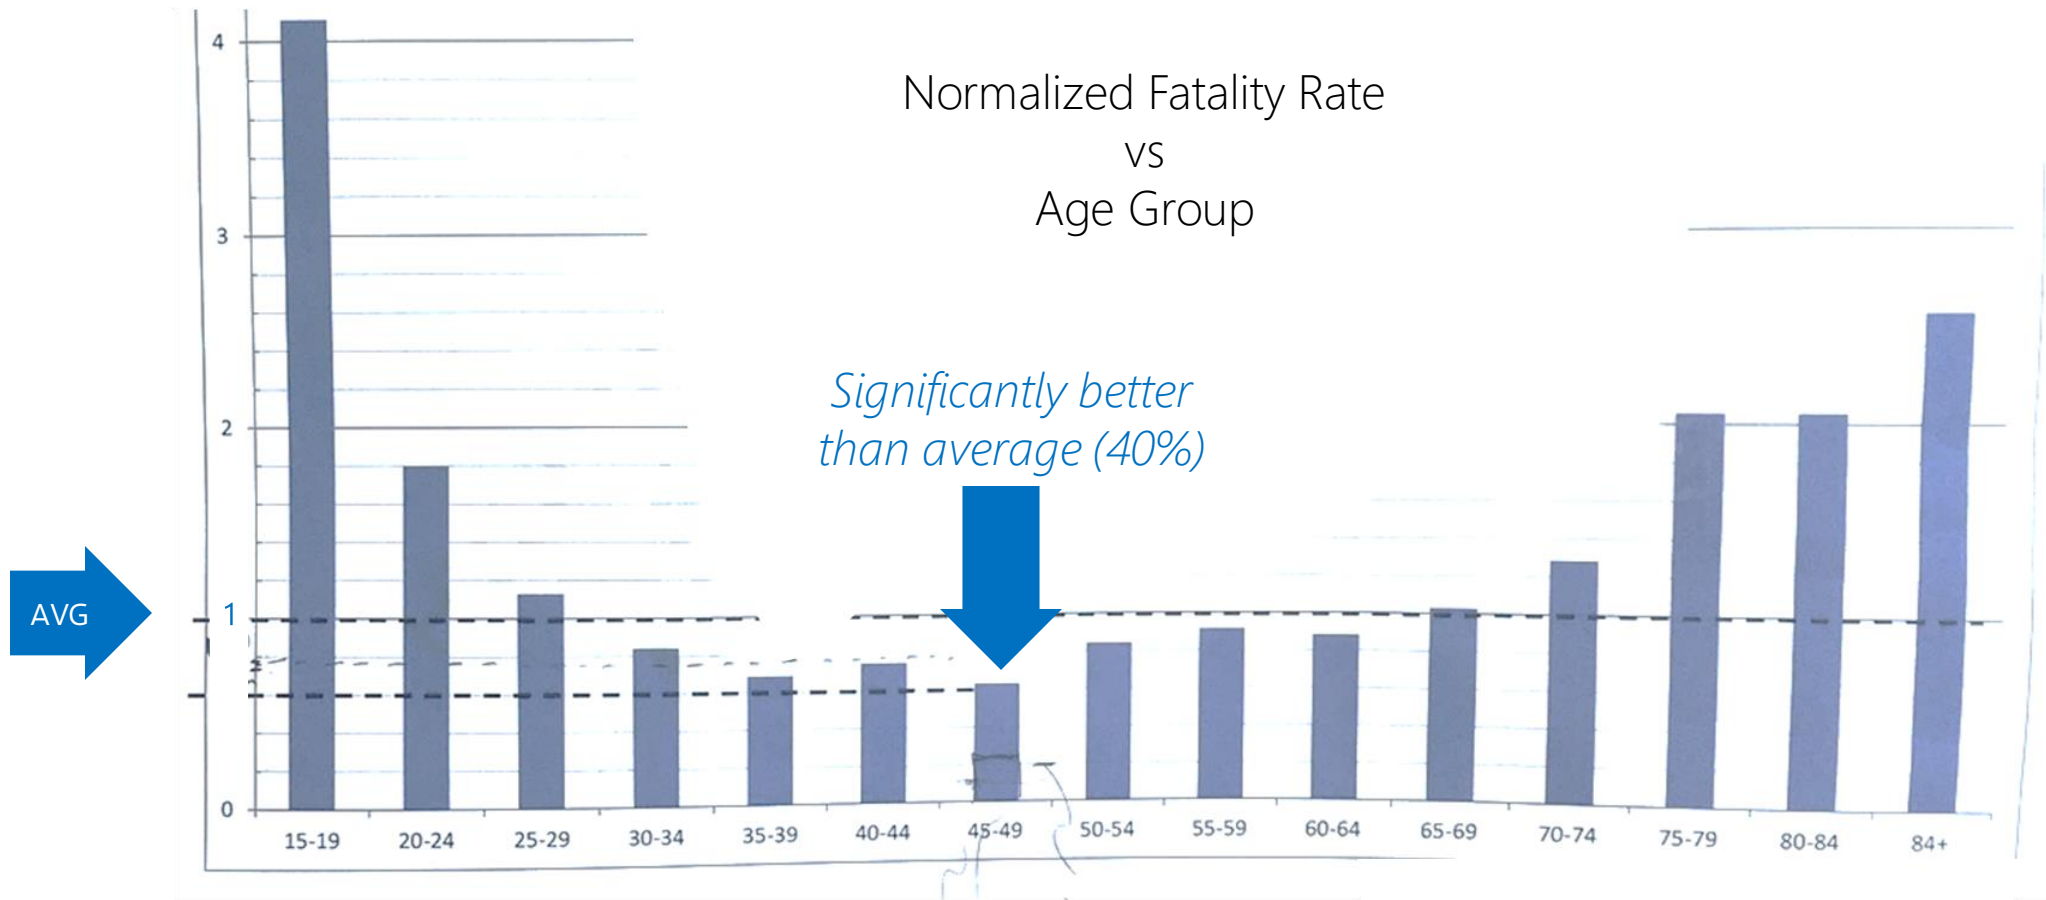

IIHS 2021 Data

# Operational Domain: Age of Driver

Analysis by author  
Data from Texas Transportation Institute study

# Operational Domain: Age of Driver

Analysis by author  
Data from Texas Transportation Institute study

# Operational Domain: Age of Driver

680% more fatalities

For a 47yo driving from MI to FL, would having an 18yo driving be ok?

Analysis by author  
Data from Texas Transportation Institute study

# Operational Domain

## Something to Think About

Is the AV safe enough?

Safety Capability:  
**5x** Avg Driver

Rider **A**

Safety Capability:  
**10x** Avg Driver

Rider **B**

Safety Capability:  
**1x** Avg Driver

# Measuring AV Performance

## In Summary

- A highly significant aspect of driving is crashes and fatalities
- Benchmarking AV to human safety performance can and will be done
- Human performance can be measured as miles-between-fatalities
- The conditions (OD) of human to AV comparison matter
